Total expenditure of head office and branches, including rents, repairs, salaries, &c.	202,441	Balance from last account	38,535
Amount transferred to depreciation of securities	150,000	Gross profits of half-year, after providing for interest on deposits, income-tax, composition for stamp duty on notes and post bills, rebate on bills discounted, and making provision for bad and doubtful debts, &c.	471,116
Proposed dividend for the half-year at the rate of 12 per cent. per annum, less income-tax, at 6s in £, £116,308; amount to be carried forward to next account, £40,902	157,210		
	509,651		509,651

The report states that the net profits of the bank for the half-year to June 30, 1920, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amount to £268,675, to which must be added the sum of £38,535 brought forward from the last account, making a total of £307,210. Out of this amount the governors and directors have appropriated £150,000 for depreciation of investments, and recommend that a dividend at the rate of 12 per cent. per annum, less income-tax, be now declared for the half-year (payable on August 1st), which will absorb £116,308. There will then remain a surplus of £40,902 to be carried forward.

	139,017		139,017

The report submitted to the meeting held on July 26th, states that, after providing for rebate on bills, interest on deposits, and bad and doubtful debts and contingencies, the net profits for the half-year amount to £37,862, to which has to be added balance of undivided profits from last account, £17,296—£55,158. The directors have transferred to the reserve fund £10,000, and to credit of investments account £15,000. They recommend that the balance be applied as follows, viz.: in payment of a dividend for the half-year at the rate of 8 per cent. per annum (subject to deduction of income-tax), £20,000; to next account, £10,158—£55,158.

MUNSTER AND LEINSTER BANK, LIMITED.

The report presented at the meeting held on July 20th states that the profits of the bank for the half-year ended June 30, 1920, after deducting expenses, providing for interest on deposits, rebate on bills, and for all bad and doubtful debts, amount to £70,993, to which has to be added the balance from the last account, £24,234, making a total of £95,227. The directors recommend the payment of a dividend for the half-year at the rate of 20 per cent. per annum, £40,000, less income-tax at 6s in the £, £12,000—£28,000; and after transferring to investment contingency account £35,000, and applying in reduction of premises account £5,000, there will remain to be carried to next account £27,227—£95,227.

BALANCE-SHEET—June 30, 1920.

Liabilities.	£	Assets.	£
Capital—200,000 shares of £5 each, £2 paid	400,000	Cash on hand, at Bank of England, and with other bankers	1,871,598

		Bank premises, head office and branches	96,297
	23,659,232		23,659,232

NATIONAL BANK, LIMITED.

The report presented to the meeting held on July 22nd, states that the profit and loss account for the half-year ended June 30, 1920, including £26,790 brought forward from December 31st last, shows a balance of £161,238 available for distribution. A dividend at the rate of 12 per cent. per annum, or 12s per share (£10 paid), less income-tax, absorbs £63,000, leaving a balance of £98,238 to be dealt with. Owing to the recent large addition to staff salaries, allowances, &c., and to the present heavy depreciation in Government stocks, nothing has been carried on this occasion to the rest. The directors have had to make provision for increased taxation under the Finance Bill and for contingencies, and a sum of £70,000 has been set aside for the purpose. £28,238 has been carried forward to profit and loss new account.

BALANCE-SHEET—June 30, 1920.

FUNDS £11,313,000.

Guaranteed Surrender Values. **Liberal Policy Conditions.**

At the last Quinquennial Valuation at 31st December, 1915, the surplus amounted to £1,205,739, after writing off £616,535 for Depreciation.

Of this Surplus £500,643 was retained in hand for future contingencies—further depreciation, higher taxation, &c.

Head Office - - 196, STRAND, LONDON, W.C. 2.

The Investor's Monthly Manual.

ESTABLISHED 1864.

NEW YEAR DOUBLE NUMBER.

The Double Number of *The Investor's Monthly Manual*, to be published on January 3rd, 1921, will give in addition to the usual information, the highest and lowest prices of all stocks and shares for 1916, 1917, 1918, 1919 and 1920, the latest quotations for 1920, a tabulated chronicle of the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign and Colonial Governments, to Railways, &c., &c. In addition, there will be furnished the addresses of the various companies, with the names of the Chairmen and Secretaries, or Managers.

TO ADVERTISERS.

The Investor's Monthly Manual is published at the beginning of each month, and is by far the MOST COMPLETE PERIODICAL RECORD in existence of the dealings, throughout the United Kingdom, in every description of stocks and shares, &c., &c. Over 4,000 securities are dealt with each month.

It is absolutely free from any connection with any financial house or speculative agency, and it is subscribed to by Investors of all classes, as well as by Banking Houses, Chambers of Commerce, Mercantile Firms, Stockbrokers, Railway, Insurance, Shipping, and other Companies throughout the United Kingdom, the Colonies, and abroad.

Its circulation, therefore, is of a widespread and influential character, and it is a most valuable medium for advertisements of all descriptions.

The Manual will be found especially suitable for advertising debentures of every kind, prospectuses of limited liability companies, and investments of all descriptions; and for giving publicity to the announcements of banking, insurance, and other companies, publishers and auctioneers. Its importance to the general advertiser can hardly be over-estimated.

The above number has a LARGE ADDITIONAL CIRCULATION, and, being greatly used as a work of reference, it affords an excellent opportunity for giving a PERMANENT PUBLICITY for advertisements.

Orders, to ensure insertion, should reach the Office, 3, Arundel Street, Strand, London, W.C. 2, on or before Thursday, December 30th, 1920.

bank's officers, £29,904—£146,764; which, with the balance brought from last year, £42,538, makes a total for disposal of £189,302. Dividends at the rate of 17½ per cent. on the "A" shares and 8¾ per cent. on the "B" shares, also £3,226 for interest on new shares, amounting in all to £86,352, less income-tax, £24,935, have been paid. £5,781 has been applied in reduction of bank buildings account, £75,000 has been transferred to meet depreciation in investments, leaving balance of £47,104 undivided profits to be carried to next account.

LATEST BALANCE-SHEETS OF FOREIGN BANKS HAVING LONDON OFFICES.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

(With which is affiliated the British Bank of South America, Limited, and the Commercial Bank of Spanish America.)

The report presented to the meeting held on October 20th is as follows:—The net profit for the year ended June 30, 1920, after making provision for all charges, rebate, &c., amounts to £1,024,156, which, together with £241,619 brought forward, makes a total of £1,265,775, of which £262,500 was absorbed by the interim dividends paid on April 30th last. There is an available balance of £1,003,275, of which the directors recommend that £227,715 be applied to the payment of a final dividend of 9s per share, less income-tax, on 722,904 old shares; £37,844 be applied to the payment of a final dividend of 7s 2½d per share, less income-tax on 150,000 new shares issued in October, 1919 (being pro rata on capital paid up or due to May 1, 1920), both being payable on October 27th. The foregoing dividends make a total distribution for the year of 15 per cent., in addition to which a special interim dividend of 10s per share on the old shares and 1s 3d on the new, both less income-tax, was paid April 30th last. £58,600 be applied in payment of the expenses in connection with the acquisition of the shares of the British Bank of South America, Limited; £50,000 be added to the investments reserve fund in order to provide for depreciation of securities; £136,000 be added to the reserve fund, which now amounts to £3,850,000, including premiums received on new issues; £25,000 be added to the staff pension and guarantee fund; £75,000 be applied in payment of a bonus to the staff; and that the balance of £393,116 be carried forward—£1,003,275. The purchase of the shares of the British Bank of South America, Limited, has been completed, and out of the total of 100,000 shares of £20 each, with £10 paid up thereon, holders of 99,238 shares have accepted the offer. The issued capital is thereby raised to £8,729,040, of which £4,364,520 is paid up, and this sum will be increased when any further assents may be received. Since June 30th, arrangements have been made whereby we have acquired 60 per cent. of the capital of the Banco de A. Edwards y Cia., of Valparaiso and Santiago, Chile, at the price of $190 for each share on which $100 is paid up. The Commercial Bank of Spanish America, Limited, in which we had a holding of 240,781 shares of £1 each out of a total of 261,417 shares, has developed its business so considerably as to necessitate an increase in its paid-up capital to £500,000, and we have accordingly subscribed for the balance of 238,583 shares at par.

AUDITORS' REPORT TO THE SHAREHOLDERS OF BAKER, DUNCOMBE & CO., Limited.

In accordance with the provisions of Section 113 Sub-section 2 of the Companies (Consolidation) Act, 1908, we report to the Shareholders as follows:—

1. We have audited the above Balance Sheet and have obtained all the information and explanations we have required.
2. We have examined the Securities, Bills and Cash in Hand, and verified those in the hands of various Banks.
3. We are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Company.

BANKING DEPARTMENT

Current Accounts are opened for Shareholders and Customers or Friends introduced by them. Interest at the rate of 2½ per cent. per annum, credited annually in first week in January, is allowed upon the minimum monthly balance, provided it is not under £20. No commission charged for keeping Accounts, but the opening lodgment must not be less than £10, nor the minimum balance less than £5.

Deposits are received at interest. Amounts up to £500 at seven days' notice of withdrawal; sums in excess of that figure are subject to special arrangement as to notice.

Interest is allowed from date of deposit to date upon which withdrawal notice expires, and is added half-yearly, viz., June 30th and December 31st.

The Directors reserve to themselves the power to return Deposits or change the rate of Interest.

Country and Foreign Drafts, Dividends, Coupons, Annuities, Pensions, etc., received and placed to credit. Drafts, Circular Notes and Letters of Credit obtained.

American and Canadian Express cheques cashed and Foreign money exchanged.

A Good Market for the Man who wants Good Stock

WHEN you buy all your clothing needs from the House with a World-wide reputation—whether you buy in Fenchurch Street, Ludgate Hill, Brighton, or from any one of Hope Brothers' many Branches throughout the country—you know that you can absolutely depend on the quality, style and value offered.

Because you are dealing with a House that actually makes—in its own factories—many things for men's wear you are investing your money to the best advantage.

Surely Hope Brothers is *your* best market to-day for Men's wear.

IONIAN BANK,

LIMITED.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844 and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

BANK'S SATISFACTORY POSITION.

LARGE INCREASE IN BUSINESS.

MR HOSE ON FINANCIAL AND TRADE CONDITIONS IN SOUTH AMERICA.

THE COUNTRY'S ECONOMIC CONDITIONS.

The thirty-second annual general meeting of the Anglo-South American Bank, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London, Mr Robert John Hose, the chairman, presiding.

REPORT OF THE DIRECTORS.

The report of the directors for the year ended June 30th last states that:—

The net profit, after making provision for all charges, rebate, &c., amounts to £1,024,156 0s 5d; which, together with £241,619 6s 10d brought forward, makes a total of £1,265,775 7s 3d, of which £262,500 was absorbed by the interim dividends paid on April 30th last. There is now an available balance of £1,003,275 7s 3d, of which the directors recommend that

£	s	d	
227,714	15	2	be applied to the payment of a final dividend of 9s per share, less income-tax, on 722,904 old shares,
37,843	15	0	be applied to the payment of a final dividend of 7s 2½d per share, less income-tax on 150,000 new shares issued in October, 1919 (being *pro rata* on capital paid up or due to May 1, 1920), both being payable on October 27th. The foregoing dividends make a total distribution for the year of 15 per cent., in addition to which a special interim dividend of 10s. per share on the old shares and 1s 3d on the new, both less income-tax, was paid April 30th last.
58,600	7	6	be applied in payment of the expenses in connection with the acquisition of the shares of the British Bank of South America, Limited,
50,000	0	0	be added to the investments reserve fund in order to provide for depreciation of securities,
136,000	0	0	be added to the reserve fund, which now amounts to £3,850,000, including premiums received on new issues,
25,000	0	0	be added to the staff pension and guarantee fund,
75,000	0	0	be applied in payment of a bonus to the staff, and that the balance of
393,116	9	7	be carried forward.
£1,003,275	7	3	

The increase of capital referred to in our last report has now been effected by the issue of 150,000 shares.

The arrangement referred to in our circular of February 21, 1920, for the purchase of the shares of the British Bank of South America, Limited, has been completed, and out of the total of 100,000 shares of £20 each, with £10 paid up thereon, holders of 99,238 shares have accepted the offer. Our issued capital is thereby raised to £8,729,040, of which £4,364,520 is paid up, and this sum will be increased when any further assents may be received.

Since June 30th, arrangements have been made whereby we have acquired 60 per cent. of the capital of the Banco de A. Edwards y Cia., of Valparaiso and Santiago, Chile, at the price of $190 for each share on which $100 is paid up.

The Commercial Bank of Spanish America, Limited, in which we had a holding of 240,781 shares of £1 each out of a total of 261,417 shares, has developed its business so considerably as to necessitate an increase in its paid-up capital to £500,000, and we have accordingly subscribed for the balance of 238,583 shares at par.

The following directors, who have been elected to seats on the board since the last general meeting, now retire, viz.:—Alfred George Gumpert, Esq., William Herbert Hollis, Esq., Sir Clarendon Golding Hyde, and, being eligible, offer themselves for re-election.

The assistant secretary (Mr Ernest E. Hayes) having read the notice convening the meeting and the auditors' report,

CHAIRMAN'S SPEECH.

The Chairman said:—Ladies and gentlemen, when our last annual general meeting was held, one complete year had practically elapsed since the declaration of the Armistice, and the time seemed appropriate for a review of the financial and economic results of the war so far as they could then be ascertained. At that time, however, we were still in many respects under war conditions; our national expenditure remained on an enormous scale; our national revenue was unequal to the burden; and our debt was increasing week by week. During the past twelve months, however, this condition of affairs has been changed. The national expenditure, though still, of course, abnormal, judged by pre-war standards, has declined appreciably, while our revenue is moving upward, and this year, for the first time since 1913-14, the Government revenue, failing untoward events, is estimated to exceed the ordinary expenditure. The estimates of revenue, however, are partly based on the proceeds of sales of surplus war materials, and their realisation depends very largely upon the general course of events, as to which it would be unsafe to prophesy.

COUNTRY'S FINANCIAL POSITION.

Internationally our position is considerably improved, for, although our debt to the United States is increasing under the recent arrangement by the addition of interest, our immediate liabilities are being reduced, as witness the repayment last week of this country's portion of the Anglo-French Loan. Our war debts to other foreign countries have been steadily reduced, and the internal floating debt has not increased. During the year ended June 30th last the total of the Ways and Means advances was reduced by about 500 millions sterling, partly by means of surplus revenue and the proceeds of the Victory Bonds and Funding Loan issues, and partly owing to the increase in the Treasury Bills outstanding during the same period. This increase amounted to some 250 millions sterling, and, although it is impossible to follow in detail the effect of these huge financial operations, it is obvious that there has been a considerable deflation of credit during the year, which goes far to explain the growing scarcity of funds in Lombard street.

So long as the floating debt remains at anything like its present enormous figure, however, so long must there be uncertainty in the financial outlook, with its unfavourable effect on business conditions, and it may be hoped that the Government has the matter well under consideration, and is fully prepared to take advantage of any change in conditions during the next few months which may offer a favourable opportunity for the accomplishment—at least in part—of that most desirable—indeed, that most essential—operation, the conversion of floating debt into the form of long-dated loans.

LABOUR CONDITIONS.

Unfortunately, however, it is not the Government finances alone which are hampering the return of a real prosperity to this country. Labour conditions remain very unsatisfactory as judged from the standpoint of the community as a whole. The demand is still for more money, without, apparently, the slightest consideration of the fact that more money without more production is futile, and that the position of the consumer is only worsened thereby. I must apologise for troubling you with the elementary, and for restating well-known economic facts, but my reason for doing so is that I wish to emphasise that it is in the simple things that the solution of the difficulty lies. It is impossible in the time at my disposal to go deeply into the question, but I would like to give you in a comparatively few words what seems to me to be some of the vital points in the situation. One of the chief troubles of the world to-day is that, with a vastly increased supply of so-called money, there has been a contraction in tangible assets. During the war period the efforts of labour in all countries were largely perverted from the making of goods for the sustenance and greater comfort of the world to the production of war materials. Production's chief aim for the time being was to facilitate destruction, and we are now seeing the results of five years of this process.

SUPPLY AND DEMAND.

Nearly two years have now elapsed since hostilities ceased, but the general shortage of goods at reasonable prices still exists, while,

taking the world as a whole, nothing has been done to contract the supplies of money on the contra account. The consequence has been a steady rise in the money prices of all classes of goods, which is only now receiving a check. In the last few months there has been weakness in the markets for all commodities, and at the present time we seem to be on the brink of a further reaction, but, unfortunately, it may not be possible to say that this reaction, if it come, will have resulted from the reversal of the unhealthy conditions brought about by the war, but rather by an emphasising of the evils. Production, instead of being restored to the 1914 ratio or greater, has tended to contract, and continued demands on the part of labour for increased money wages have been accompanied by a shortening of working hours and an even greater reduction, proportionately, in individual and collective output. As a natural result, not only have prices, as expressed in British money, been advanced against the consumer, but the nation, collectively, has suffered through a raising of prices as expressed in other currencies. Producing less and consuming more, we can but export less, and if we export less, so much the less can we draw in return from foreign countries, whether of raw materials or foodstuffs. The less we export, the higher must general prices go, and, presumably, adjustment has again to be sought by means of a renewed advance in wages. This is the vicious circle, in fact, from which the country and the world has been suffering for at least seven years.

NEED OF INCREASED PRODUCTION.

There is, in my opinion, only one solution of the difficulty, and that is of the simplest. Only by a net increase in production can we hope to restore that stability of conditions which is essential to real prosperity—a prosperity extending to all sections of the community. The producer, whether he work with hand or brain, has the solution in his own hands. He can, to a large extent, fix his own wages—his own real wages—and he can do so without the industrial strife which has been in progress for so long. But a change of policy is necessary. A reasonable rate of money wages having been secured, the rest depends upon the producer himself. Instead of concentrating upon an effort to raise the nominal rate of wages as expressed in money, attention must be directed more particularly to the maintenance of output at a reasonable level, so as to ensure that, as time goes on, the ratio of increase in the supply of goods shall be somewhat greater than that of the increase in the supply of money, for the larger the output the lower relatively the price of the product should be, and, consequently, money wages should purchase more goods. This is not merely economic theory, and once this truth is appreciated by the majority of the manual workers, as it is already by some amongst them, a greater advance will have been made towards the world's comfort than can ever result from Labour's present tactics of demanding more of the shadow and giving less—which inevitably involves also receiving less—of the substance resulting from the producers' common effort.

The economic truths to which I have referred found recognition in the principle advocated—so far, I regret to say, unsuccessfully—in the proposed terms of settlement of the dispute in the coalmining industry of this country. That an increase in money wages should be dependent upon an increase in production seems to be the best, if not the only, solution. There may be difficulties in working out the details of such an arrangement, but the profit-sharing which would be involved seems at once to be the soundest and most fair means of bringing about that increase in production of which there is so great a need to-day, and if the principle can be applied to all the important industries a great step will, in my opinion, have been taken in the rehabilitation of our position in the commercial and financial world.

CONDITIONS IN ARGENTINA.

In Argentina conditions have again been very satisfactory. The country has been passing through a period of very great prosperity, resulting in the main from the abundance, good quality, and high value of the principal cereal crops. Owing to the world-wide shortage, there was keen competition amongst the consuming markets, and prices reached record levels, while exports of cereals from the country attained unprecedented proportions. There has been no scarcity of shipping for the movement of this produce, and the inward freight which has thus been provided has stimulated the import trade also. Labour troubles have been somewhat persistent during the year, but they have generally been confined to particular industries and have not assumed the general and violent character reported in former years. A partial cause, but also, to some extent, a result of these conditions, has been a further rise in the cost of living as expressed in foodstuffs, clothing, fuel, and rents.

The official trade figures still show general expansion. For several years now Argentina has enjoyed a substantial export surplus—the total exports for 1919 were valued at $1,031,000,000 gold, and imports at $656,000,000, giving a balance of trade in favour of Argentina of $375,000,000, and that these favouring conditions continue is indicated by the latest returns of the Buenos Aires Customs House, the revenue for the financial year up to the first week of last month amounting to $155,535,000, as compared with $96,997,000 in the corresponding period of last year. The credit statistics also continue to be very satisfactory, commercial and private failure during the first half of 1920 involving an aggregate amount of only $21,551,638—paper; which is the lowest total reported in the first half of any year for more than ten years past.

TRADE BETWEEN ARGENTINA AND GREAT BRITAIN.

Trade between Argentina and this country has continued active, and, so far as values are concerned, we are now once again up to pre war figures. In the twelve months ended December 31st last Argentina's imports from the United Kingdom amounted to $154,478,000, this comparing with $125,091,000 in the previous year, but with $154,053,000 in 1913. In the same period, however, Argentina's imports from the United States increased from $73,012,000 to $232,868,000, the United States having thus for the time being assumed our position as the principal exporter to Argentina. It may be interesting to note that during the year Argentina imported from Mexico commodities to the value of $12,987,000, as compared with $1,593,000 in 1913, which is illustrative of the improvement in Mexican conditions, to which I shall have occasion to refer further in a later part of this address.

As a natural result of the general prosperity of the country and the extremely active state of foreign trade, the financial situation of the Government is easier. The problem of the consolidation of the floating debt is still, however, unsolved, and the Treasury Bills, which constitute the larger portion thereof, are renewed as they fall due. During the first nine months of the present year the floating debt was reduced from $651,000,000 paper to $548,000,000 paper. It is now composed as follows:—

	$
Overdraft at the Banco de la Nacion	108,000,000
Treasury Bills	14,000,000
Loans by British Government on account of the Baring-Morgan Loan	116,000,000
Short-term Loans and Supplementary Credits	310,000,000
	$548,000,000

The total amortization of the external and internal debt during the nine months amounted to $130,000,000. The Baring-Morgan Loan of $49,300,000 U.S. gold, which fell due in the United States in May last, was paid off by means of an arrangement with the British Government whereby the latter advanced the necessary funds at 5 per cent. per annum interest until January 14, 1921, when the amount will be applied towards repayment of the balance of the 200 million dollars gold loan made to the British and French Governments in 1918 by the Argentine Republic through the Banco de la Nacion for the purchase of produce. The present balance of this debt is roughly 120 millions gold.

In September of last year the Executive submitted to Congress a Bill authorising the emission of a 600 million dollar Lottery Loan, but this proposal has now been modified and the Budget Committee of the Senate has drawn up an alternative proposal of an issue of 400 millions of Four per Cent. Treasury Bonds. In addition to this loan, which would only concern banks and companies, the Committee propose a 200 million Five per Cent. Lottery Loan for issue to the general public. It is probable that some part of the national expenditure will be provided by fresh taxation, and an important feature in this year's Budget, and one likely to have far-reaching effects, is the income-tax project which it contains.

GOLD MOVEMENT AND EXCHANGES.

The stock of gold coin held by banks at the end of June last amounted to $80,956,000 gold; that at the Caja de Conversion to $430,999,680; and that at the Argentine Legations abroad to $39,598,489. The total gold holding of the Caja was thus $470,598,169, as compared with $383,207,637 at the end of June, 1919. The note circulation at June 30th was $1,362,559,524 paper, against $1,163,944,679 a year previously, so that the proportion of gold to the total issue was 78.50 per cent., as compared with 74.82 per cent. in June, 1919. The note issue is thus exceedingly well secured, and it is not surprising that the question is again being raised as to the possibility of the removal of the embargo on gold exports from the country. A Bill was recently introduced authorising the Banco de la Nacion to withdraw up to $64,000,000 of gold from the conversion fund, against the surrender of paper money, for the purpose of normalising the exchange position with the United States of America. The Bill has been passed by the Chamber of Deputies, but, according to the latest advices, it has not yet received the sanction of the Senate.

In the early part of the bank's financial year there was a steady

rise in the sterling value of the Argentine dollar, the highest point of 73d being touched early in February. From this high level there was a sharp reaction, and before the end of March the quotation had fallen to 59d, while it has since been as low as 55½d. The exchange position, especially in the first half of 1920, led to heavy gold imports into Argentina, substantial amounts of the metal arriving from the United States and from Great Britain. Towards the middle of May, however, the New York rate moved against Argentina, allowing of transfers of gold in the opposite direction. The actual export of the metal still being prohibited, however, these transfers were realised by the deposit of gold in the Caja de Conversion, which simultaneously released a similar quantity from its stock of the metal deposited with the Federal Reserve Bank to the order of the Argentine Embassy at Washington. Facilities for this operation were withdrawn by the Argentine Government in July, and, as the volume of imports from the United States is at present largely in excess of Argentina's exports to that country, the rate between Buenos Aires and New York moved decidedly in favour of the latter market, so much so that early in September the suspension was revoked, and the whole of the remaining balances of the Argentine Government at the Federal Reserve Bank ($22,781,341 U.S.) placed at the disposal of the Banco de la Nacion for exchange purposes. This amount has already been drawn upon, but so far without appreciable effect upon quotations. The cable rate is now about 127, which is equal to a premium of approximately 22½ per cent. on the United States dollar, as compared with Argentine currency.

The stock of gold in the country increased during 1919 by 42 million gold dollars, while the expansion during the first half of this year amounted to 135½ million gold dollars. This bank has participated largely in the movement, having handled in the course of the year ended June 30th last through our Buenos Aires branch shipments to the value of 62½ million gold dollars (50 million dollars from the United States and £2,350,000 from the United Kingdom).

Cancellations of mortgage loans payable in foreign currencies have been effected on a very large scale, and debtors have thereby realised handsome profits. The favourable state of the exchange on Europe has also led to the importation of large quantities of national and provincial bonds and "cedulas" from Europe, which circumstance has been accompanied by a marked decline in the prices of securities, and has contributed to the firmness of the local money market. The value of such securities re-imported since October, 1918, is estimated at over $100,000,000 gold. We have participated largely also in this movement, both in Paris and at head office.

FIGURES OF THE LOCAL BANKS.

A further proof of the country's wealth is afforded by the figures of the local banks, the position at June 30th in the last two years being as follows :—

	June 30, 1920. $ (Paper).	June 30, 1919. $ (Paper).
Deposits	3,486,533,471	2,882,336,053
Advances	2,327,347,944	2,011,457,342
Cash holding	1,190,638,708	951,842,288

CEREALS.

As already mentioned, cereal prices have been exceedingly high, and exports have been on a record scale. These two factors together naturally reacted upon the price of bread, and brought about a somewhat serious situation for the poorer classes in the country, so much so that the Government was moved to action in order to ameliorate the position. The sanction of Congress was secured in June last to a law whereby an additional export tax of $4 paper per 100 kilos was imposed on wheat and $5 on flour, while the quantity of wheat to be exported from the date of the law was limited to 100,000 tons. The Government also took powers to expropriate wheat and its derivatives at current market prices, and to release these commodities for consumption within the country at a lower price, the subsidy involved being provided by the additional export tax.

The maize harvest was abundant, being estimated at 6,571,000 tons, and, as will be seen from the table given below, prices of this, as well as of other species of grain, have been very satisfactory, although, with the exception of wheat, lower than they were a year ago.

	Present prices. $ (Paper). Per 100 kilos.	Prices a year ago. $ (Paper). Per 100 kilos.	High level during year. $ (Paper). Per 100 kilos.
Wheat	24.30	15.00	27.50
Maize	9.35	7.90	11.30
Oats	10.60	7.30	11.40
Linseed	25.65	23.00	32.50

It is expected that the area under wheat this year will not be less than it was during the past season, but a reduction of about 30 per cent. is foreshadowed for linseed. The flour-milling industry has reached a high stage of development, and there is an increasing foreign demand for Argentine flour, the chief market being Brazil, which takes upwards of 70 per cent. of the export. Shipments in 1919 were 276,300 tons, as compared with 130,800 tons during 1918. The total for the first six months of the present year was 157,579 tons, as compared with 160,166 tons in the corresponding period last year.

MEAT.

Owing to the termination of the British Government contracts at December 31st last, the freezing works' purchases of cattle fell off during the present year, and this fact, coupled with an abundant supply of cattle on offer, caused an appreciable fall in live-stock prices. The "frigorificos" are working up to their normal capacity, and although the margin of profit obtainable is gradually getting back to a pre-war basis, there is no reason to anticipate any great contraction in the export demands for frozen meat. Owing to a falling-off in the demand for the United States, prices of hides fell considerably during the first part of the year, but there has since been some recovery, and the greater part of the accumulated stocks has been disposed of.

SUGAR.

The sugar harvest yielded last year 291,000 tons, as against the 1918 crop of 126,000 tons. This, together with a balance of some 45,000 tons left over from the previous year, gave a surplus of 115,000 tons over the quantity necessary for home consumption. In spite of this large surplus and the high price of sugar in all the world markets, export has now been prohibited, and Congress is considering means of bringing about a reduction of the cost to the local consumer. This year's harvest is likely to be lighter on account of damage caused by frosts.

WINE, WOOL, AND OTHER PRODUCE.

The Argentine Republic to-day holds the fourth place amongst the wine-growing regions of the world, the output during the past year amounting to 4,071,000 hectolitres, as against 4,313,000 for 1918. This industry prospered exceedingly during the year owing to the high prices realised. The current price of Mendoza is 53 cents per litre, as compared with 38 cents a year ago, and under these favouring conditions the financial position of both the grape-growers and the wine producers has been very considerably improved.

Exports of wool during the present season have exceeded those for the corresponding period of last year, but the greater part of the shipments was effected during the early months of the year, and consisted largely of lots held over from former years, the export of which has been impossible on account of the war. The local market is very dull, and prospects are uncertain. Prices of coarse wools have experienced a heavy fall, creating a very serious situation for producers, especially in the Bahia Blanca zone. At about the end of August stocks held at the Central Produce Market in Buenos Aires amounted to 22,000 tons, while the stocks held in private warehouses in the city were estimated at 12,000 tons, of which total 85 per cent. is said to be composed of coarse wool. It is estimated that the total stock of unsold wool in the Argentine is between 85,000 tons and 100,000 tons, and, in order to improve the position, certain classes of wool have been exempted from the export tax. The exports for the 1918-19 season amounted to 283,066 bales, as compared with 288,051 bales in 1917-18, and the total from October 1, 1919, to August 12, 1920, was 281,320 bales.

Exports of butter during 1919 amounted to 15,250 tons, compared with 14,894 tons in 1918. For the half-year to June 30, 1920, the quantity was 10,133 tons, as against 13,706 tons during the same period last year. The diminution is explained by the maintenance by the British Government of its control of butter imports. Exports of quebracho reached 172,600 tons for 1919, as against 124,700 for 1918.

Owing to protracted strikes, the output of the Government-owned oil wells at Comodoro Rivadavia was somewhat reduced, the total for 1919 being 188,000 cubic metres, as compared with 196,000 cubic metres in the preceding year. An interesting development of the industry is the recent announcement of the acquisition by the Buenos Aires and Pacific, Southern, and Western Railways of a 20 years' usufruct of the oil-bearing properties of the Compania Argentina de Comodoro Rivadavia. The railway companies, which will exploit the wells under Government control, thus hope to solve the serious problem of fuel supplies.

MANAGER'S REPORT FROM BUENOS AIRES.

We have just received the following cable from our manager at Buenos Aires :—"As a result of excellent rains this month, what

threatened to become a very critical state of affairs has been ameliorated. All cereal crops are now in promising shape, although, owing to the earlier drought, linseed and oats will show an important shrinkage—say, anything up to 30 per cent. No official statistics are published as to the area sown, but the general calculations are that it is more or less the same as last year. Cattle camps are rapidly improving, and the market for fat stock is good. The wool market is paralysed. It is calculated that there are 80,000 tons on hand, principally coarse wools, apart from the new clip coming forward. The share market is quiet, with stocks marked down pretty low. The money market shows signs of tightening, and is likely to continue so till the coming crops have been marketed. The market in general reflects the unsatisfactory labour, political, and financial situation in Europe, and is marking time meanwhile. The Stock Exchange Committee are not in favour of the project presented by the deputies to export gold, which project is in suspense owing to the Legislative Chamber being in recess and not yet convened to a special session. The labour situation is still causing anxiety, although there is calm at present."

CONDITIONS IN CHILE.

Business conditions generally in Chile have been satisfactory, and the progress towards a normal state following the re-establishment of peace has been more rapid than was to be anticipated. The increase in shipping facilities has allowed of the resumption of nitrate exports on a considerable scale, and has also facilitated the general overseas trade of the country, and the trading community has been actively employed in supplying the demand for many articles which were practically unobtainable during the war period. Labour troubles were again in evidence during the year, but, owing to the fact that they have been met by a judicious blend of firmness and conciliation, the resultant disorganisation of trade was comparatively slight. The strike of the maritime workers and the coalminers had an adverse effect upon transport, both shipping and the railways suffering from an unusual shortage of fuel.

The most serious obstacle to Chile's development at the present time lies in the condition of the railways. Owing to the practical cessation of imports of rolling stock during the war period the lines have degenerated into a regrettable state of disrepair, and they are also greatly lacking in the matter of equipment. It is satisfactory to note, however, that this matter is receiving the attention of the Government, and a Bill was recently introduced to Congress authorising the raising of a loan of some 200,000,000 pesos gold for the rehabilitation of the railway services. When obtained it is proposed to apply this money in the purchase of rolling stock and in the construction of warehouses and other necessary works, in addition to which electric traction is to be introduced on certain parts of the system.

The Government has also shown a tendency to take a financial interest in maritime transport, a proposal having been mooted for the formation of a national steamship line, in which the Government and private capital would be interested in the proportions of 55 per cent. and 45 per cent., but the scheme has yet to take definite shape.

TRADE AND THE EXCHANGES.

As already mentioned, the supply of shipping has been somewhat increased during the year, but although this is so, the overseas trade position is less favourable than in the preceding years. The imports for 1919 were valued at 401,324,195 gold dollars of 18d, as compared with $436,074,065 gold for 1918, but there was a marked falling-off in the exports, the total being only $316,977,143, as compared with $763,622,512 in the preceding year. There was thus a balance of trade against Chile to the amount of $84,437,052 gold, whereas in 1918 Chile claimed an export surplus of $327,548,447. During the war period the country's products were in abnormal demand abroad, and shipments of nitrate, meat, wool, and metals were greatly increased in quantity. Prices were also exceptionally favourable to the country, and, as a result, the value of Chile's exports in the five years 1914-18 exceeded that of her imports by no less than $1,200,000,000 gold. The moderate reaction in imports which has since occurred has not greatly affected business conditions in the country, although trade has been on more normal lines, for the over-importation in previous years had led to the creation of huge stocks, which are now in course of distribution.

Exchange has been subject to its customary fluctuation, the lowest rate quoted during the year under review being 9 13/16d on July 30, 1919, and the highest about 16⅛d. This latter was on February 5, 1920, from which date, with slight reaction, the quotation fell to 13 1/16d on June 30th this year. Early in July there was a further fall, due in no small measure to the Bolivian Revolution, and the deportation of the ex-President, Sr. José Gutierrez Guerra, who had always been considered most friendly towards Chile. The lowest figure touched since then was 10½d on July 22nd.

NITRATE INDUSTRY.

The hopes I expressed at the last meeting of an early return of normal prosperity to the nitrate industry have been to a certain extent realised. Under the combination now in force, and which commenced its life on January 10, 1919, large sales have been made at improving prices. Up to June, 1920, about 37,500,000 quintals of nitrate were sold at an average price of 10s 4d per quintal, and, from July 1st of the current year to April next, a market has already been found for over 34,000,000 quintals at an average price of 16s 4d per quintal, which figure shows a great improvement on that for the previous year. It must not be assumed, however, that the whole of this difference will accrue to the producers, as the costs of production have materially advanced, and are still increasing. To quote one instance, I might mention that oil, which is generally used as fuel on the Pampas, has risen from 70s per ton to 40 dollars American gold, which at to-day's exchange equals about 230s.

The trade, however, is undoubtedly on a much sounder basis. The monthly shipments this year have shown a very great improvement, and the stocks of nitrate on the coast have been reduced from 37,664,000 quintals in October last to 28,671,258 quintals at the end of September. Adequate tonnage is now obtainable at round about 105s, as compared with 240s at this date last year, and from the Continent the reports as to the coming season's consumption are encouraging. The demand in the United States is not quite so active as was anticipated, but this is probably attributable to local money stringency. The prices for other fertilisers remain high, and the all-round advantages of nitrate of soda are perhaps more than ever realised. Before leaving this subject, it might be advisable to point out that, in the opinion of those most conversant with the trade, care should be exercised that the price of nitrate of soda is kept to a level that will not hinder its full employment.

COPPER, MEAT, WOOL, AND CEREALS.

Although the exportation of copper has increased for the year ended June 30th as compared with the same period last year, the outlook for the industry is not at all satisfactory. Owing to the high working expenses, the rise in the price of coal, freights, &c., and the present low price of the metal, it would appear impossible for the majority of Chilean producers to work at a profit, and several mines and smelters have either closed down or are in process of doing so. A speedy reduction of importance in the cost of coal or labour appears to be out of the question, and the actual situation and immediate prospects of this section of Chilean industry cannot be regarded with satisfaction. Figures of exportation are as follows :—

July to December, 1918	45,874 tons	
January to June, 1919	24,634 tons	70,508 tons
July to December, 1919	20,016 tons	
January to June, 1920	58,952 tons	78,968 tons

The meat and wool produced in the Magellan territory found buyers at good prices, but the continuance of the prosperity of that district is dependent to a very large extent upon the future course of the market in those commodities, on which point it is unsafe to make any prediction. In Central Chile harvests have been quite good, but a large portion of the crops has undoubtedly been lost through lack of transport, considerable quantities having, during the coal strike, been left rotting in sidings owing to inability to move them.

PRESIDENTIAL ELECTION : CHILE AND PERU.

Politically, the year has been a somewhat eventual one in Chile. In the first place, the Presidential elections have attracted unusual interest owing to the extremely even character of the voting for the rival candidates. By the votes of the Electoral College Señor Alessandri was declared successful, 179 votes being cast in his favour, as compared with 174 for Señor Borgono, but this has since been challenged on technical grounds. A Tribunal of Honour was established to consider the rival claims, and eventually the decision was given in favour of Señor Alessandri, who is to be inducted into office on December 23rd.

The long-standing dispute between Chile and Peru in regard to the ownership of the two Provinces of Arica and Tacna also came to a head during the year, and for some time strained relations existed between the two countries. In Chile a partial mobilisation of the Army was ordered, and the frontier forces were increased, in addition to which the Chilean Navy was strengthened by the repurchase of certain vessels which were under construction in this country on Chilean account in 1914, and were ceded to us during the war with Germany. From Peru somewhat similar activities were reported, but it is probable that in both cases the measures were due to a natural precaution rather than to any warlike intention, and it can be quite confidently hoped that the dispute will be amicably settled in a way which will not only remove

the present tension, but will definitely end a situation which has tended to embitter the relations of the two Republics for many years past.

URUGUAY.

In Uruguay business conditions have continued active, especially on the import side, traders during the year having been engaged in meeting the demand for manufactured articles, the import of which was greatly curtailed during the war period by the lack of freight. There was keen competition between the chief manufacturing countries, which were seeking to re-establish pre-war connections in Uruguay, and, as a result, not only has the country been well supplied with all classes of manufactured goods, but in certain cases there has been an excess. The position of the export trade has been less satisfactory, however. The lack of demand for Uruguayan products in the European and North American markets has led to a heavy reduction in the export figures, and, as a result, prices of local products have depreciated considerably. In most cases, however, business firms have established large reserves in the prosperous times experienced during the war, which enable them to meet the situation with comparative equanimity; but where this conservative policy has not been followed the change in conditions has brought difficulties to light. In the case of the important freezing companies, business during the last six months has been on a greatly restricted scale, and present shipments are largely from stocks accumulated last year against Allied Government requirements, which came to an end some time ago.

TRADE AND EXCHANGES.

The official figures of Uruguayan trade for the year 1919 show that the imports were valued at 75,445,070 pesos gold and the exports at 147,289,957 pesos, there being thus a balance of trade in favour of Uruguay of 71,844,387 pesos, as compared with 46,739,600 pesos in 1918 and 31,848,000 pesos in the previous year. As mentioned above, however, the position has changed considerably during the last few months, and the figures for both May and June last showed an excess of imports over exports, which to some extent explains the recent fall in the exchange value of the Uruguayan dollar.

In February last sterling exchange touched the high level of 76d, but just before the end of June it had fallen back to 56d, and has since been as low as 54¾d. The present quotation is about 57d. The discount on sterling, therefore, has been very much reduced, but the United States dollar now commands a premium in Uruguay of about 20 per cent. as compared with that of a year ago. The fluctuations in the rates have been somewhat violent during the year, this being due in part to the importation of sugar from time to time from the Argentine, payment for which was arranged by the Banco de la Republica and some of the private banks by means of gold shipments.

THE MORATORIUM.

An unpleasant incident during the year was the suspension of a local bank in Uruguay. In point of deposits this bank ranked second only to the Banco de la Republica, and the moratorium of six months which has been granted has caused difficulties to a large number of business firms, not only on account of their present inability to withdraw funds deposited with the bank, but also owing to the curtailment of their credits there and the calling in of overdrafts. Our bank, as well as other institutions operating in Uruguay, has given all possible assistance to merchants in helping them to meet the situation, but, in view of the very large transactions of the bank in question, financial embarrassments amongst the trading community have necessarily followed. I am glad to say, however, that the report of the committee appointed to supervise the local bank's operations is favourable, and the general feeling is that, given time, the suspended institution will be restored to a position of financial soundness.

There was a further considerable increase in the land under cultivation, the area under cereals in 1919 being 747,200 hectares, as compared with 648,370 hectares in the previous year, and 583,900 hectares in 1917. In the livestock trade, the number of animals killed during the past 12 months was 1,745,098, as compared with 1,412,888 and 1,351,698 respectively in the two years preceding. Weather conditions on the whole have been favourable to agriculture, and the latest cables report that heavy rains have fallen all over the country. The crop prospects, therefore, are good, and, given the maintenance of European demands for Uruguayan products, the outlook seems to be favourable for the agricultural and livestock industries of the country.

PERU.

The prosperity which Peru has enjoyed during the last few years still attends it. In 1919 the value of the country's exports exceeded that of her imports by over £P14,000,000, the figures showing an increase of about 35 per cent. as compared with those of the previous 12 months. The official returns for the first half of 1920 are not yet available, but with the prices ruling for cotton and sugar, a further expansion is assured, and it is estimated that the figures will be nearly double those for the corresponding period of last year. The total exports of cotton for 1919 were nearly twice as large as those of the previous year, the value being £P6,938,008, and the sugar production, which realised £P8,310,770, showed an equal expansion. Copper exports were slightly lower, at 39,470 metric tons, but new smelters are being laid down at considerable cost, which should lead to a larger output in the future. As a result of the phenomenally high prices that have been obtainable for its produce, the country has been able to apply itself to internal developments, with the result that new roads have been made, railways extended, mills and machinery erected, and a large amount of fresh land brought under cultivation. Whilst, therefore, it is true that during the last two or three months the abnormally high prices have received a certain set-back, this internal development tends to make the country more self-supporting, and reduces considerably the number of articles that it has hitherto been necessary to import. This, added to the fact that the world-shortage of many Peruvian products—cotton, sugar, guano, petroleum, &c.—must of necessity keep prices to a profitable level for some time, suggests the maintenance of commercial prosperity for a considerable period.

The rate of exchange has remained in favour of Peru, as is natural in view of the enormous excess of exports, and the sterling rate closed at the end of June this year at 18 per cent. discount. It is now about 25 per cent. discount. In consequence of this, there is a tendency on the part of producers to leave the proceeds of their crops in foreign currencies, which results in an excess of credit with a shortage of circulation. The total issue of notes in Peru is slightly less than £P7,000,000, guaranteed by gold deposits to the extent of 95 per cent., and although the existing issue is now increased by £P1,000,000, it is doubtful whether this will be sufficient for the requirements of a country the size of Peru, and especially taking into consideration also the high prices of all commodities. The cost of living is extremely high, and the values of property and real estate have reached extraordinary limits; nevertheless, so rich is the country in natural products still to be fully developed, that the possibilities may be regarded as very great. Next year Peru attains its centenary, and it may be hoped that the celebrations which will then take place will mark the commencement of a further period of prosperity for the country.

BOLIVIA.

Bolivia has recently been subject to a revolution—happily bloodless—which occurred in July last, but I am happy to say that so far the effect on trade has not been very considerable. The Banco de la Nacion Boliviana, in which institution, as you know, our interests are centred, has not been affected by the political disturbances, and continues to make satisfactory progress.

MEXICO: FAVOURABLE PROSPECTS.

I referred briefly a year ago to the opening of a branch in the City of Mexico, our purpose, as I then stated, being to obtain a footing in that country, so that when political and financial conditions were restored to a more normal basis, we might be able to enter upon ordinary banking business with reasonable expectations of success. I am glad to say that this step has been justified by events, and Mexico, which for some years has been practically in a state of civil war, is showing very decided signs of recovery. The political troubles in the country date from February of 1913, and Mexico has suffered very greatly through the absence of normal development, the destruction and depreciation of property, and the accretion of heavy arrears of interest on the external debt. Since the Carranza *régime* was ended, however, political conditions have been much more settled, and the business outlook to-day seems distinctly favourable. Mexico is a country of enormous potentialities. It has vast natural resources, the due development of which is mainly dependent upon peaceful conditions in the country, and, given greater political tranquility, Mexico's rehabilitation should be rapid.

For this reason the greatest importance attached to the Presidential elections which have recently taken place, and with General Obregon in charge of the country's affairs, there seems every reason for confidence in the future. After so prolonged a period of unsettlement, the path towards recovery must necessarily be a difficult one, but considerable progress has already been made in this direction. As a result of the political amnesty, a period has been put to the insurgent raids which have devastated Mexico for so long past, and as a consequence, transport in the country is improving apace. Until recently the train service, meagre enough in the hours of daylight, was entirely suspended during the night, owing to the frequent robberies, but facilities have been considerably increased, and travelling is now reported to be safe.

As to business conditions, our branch manager reports that greater stability exists in commercial circles. No difficulty is experienced in collecting bills, applications for extensions of time are rare, and in many cases clients have anticipated payment. The one great need of the country is the provision of substantial credits abroad, and negotiations to this end have been proceeding in New York, but so far, apparently, without great success. If the conditions I have outlined prove lasting, however, and if the country is able to come to some satisfactory arrangement with her existing foreign creditors, this obstacle should not be insuperable, and I hope that a year hence it may be possible to report a real degree of prosperity in this country, for so long the sport of conflicting political interests.

BANK'S FOREIGN BUSINESS.

Our Chilean and Argentine branches naturally remain the chief basis of our business abroad, and we are pleased to say that they still give us eminently good results. Our branches outside the South American Continent continue to give us every satisfaction, carrying out the operations arising from our business in South America and in London, and also gradually building up a supplementary business, which has already attained considerable importance.

In Spain trading has been difficult, largely owing to the unsettled labour conditions in the country. Notwithstanding this, however, the business of the bank has continued to be satisfactory, and our six branches there have been actively employed throughout the twelve months, and have shown good results. A law has been passed imposing additional and heavy taxation on foreign banks trading in that country, which may involve a rearrangement of the conditions under which we work there, but we trust that something may be done in order that such a step may not be necessary.

In Paris the growth of our business has necessitated the acquisition of new premises. The fluctuations in exchange have militated against general business, but recent official returns have shown that both imports and exports are expanding, and that the national revenue is increasing.

In New York, also, the business of the bank continues to grow, full advantage having been taken by our agency there of the tremendous expansion in the trade of the United States with South America, which has been so marked a characteristic of recent years.

The success which has attended our Manchester agency, established in March, 1918, has encouraged us to open a branch in Bradford, in order to attend adequately to the requirements of our customers in Yorkshire, who consist chiefly of the importers of wool from the Argentine. Although the Bradford branch has been open only about six months, its utility has already been amply proved.

THE BRITISH BANK OF SOUTH AMERICA DEAL.

It has been our desire for some time past to extend the sphere of our operations in South America to Brazil, and the opportunity came for us to attain that end by the purchase of the shares of the Bank of South America, Limited—an operation which was approved by our shareholders at a meeting held on March 2nd last for that purpose, when we entered in detail into the reasons for the operation, and I therefore do not need to refer to them further at this moment. Out of 100,000 shares in the British Bank of £20 each, with £10 paid up thereon, the holders of 99,238 have accepted our offer to buy their shares, so that we hold practically the whole of the capital of that institution. A certain proportion of the shareholders of that bank accepted the cash offer which we made as an alternative to the offer of our shares, but arrangements had been made for reselling such shares to a syndicate formed for that purpose, and we have therefore accomplished the business without any actual outlay of cash beyond the expenses involved therein, which are referred to in our report, and which we now propose to write off out of income.

The effect of this purchase of the British Bank shares is that our paid-up share capital is raised from £3,000,000 to £4,364,520, and we have treated the operation on the basis of an issue of our shares at the price of £10 for each £5 paid, thereby adding to our reserve fund the sum of £1,364,000. This involves the inclusion in our assets of the shares of the British Bank at the price of £2,728,000, and I may add for your satisfaction that the value of those assets in our opinion considerably exceeds that sum.

CONTROLLING INTEREST IN BANCO A. EDWARDS Y CIA.

Since June 30th last, when our accounts were made up, we have effected another operation of great importance. We were approached by the chief partner in the Banco A. Edwards y Cia, with a view to our purchasing a controlling interest in that bank, the shares in which were held entirely by his family and close friends—indeed, there were only 14 shareholders. After due deliberation and examination of the books of the company, an arrangement was concluded whereby we purchased 60 per cent. of the capital at the price of 190 per cent. The Banco Edwards was established in the year 1852, and remained a private banking house until the beginning of 1914, when it was converted into a private limited company under the Chilean law. From their balance-sheet at June 30th last we gather the following figures, calculating the paper dollars at 12d and the gold dollars at 18d each:—Deposits, £2,600,914; capital, £500,000; reserve fund, £137,500; profit and loss, £59,451. And, on the other side, among other assets, cash in hand £780,736, and advances £2,116,622. The profits for the six months were £57,571, the dividend distributed being at the rate of 14 per cent. per annum, which absorbed two-thirds of the profits. The bank has branches in Valparaiso and Santiago, and as a national institution stands, it may be confidently stated, among the foremost of the Chilean banks. These facts demonstrate the importance of the connection, and we hope that this fusion will be regarded by our Chilean friends as one more proof of our desire to assist to the utmost of our power in the development of their national industries.

The Commercial Bank of Spanish America, Limited, has so increased its business that it has been deemed desirable that its issued capital should be raised from £261,417 to £500,000, and we have subscribed for the 238,583 additional shares at par.

NEW BRANCHES.

We have established a branch in Lima, Peru, which was opened for business on January 2nd last, and I am happy to say that even at the outset it has achieved results which have exceeded our anticipations.

You may be aware that previously we not only held an interest in, but also gave, as and when required, facilities to the Banco del Peru y Londres. In opening our new branch, we have been particularly anxious not to in any way lessen the friendly and cordial relationship which has existed between us and that bank, and we have received from the president and leading officials assurances that they appreciate to the utmost our reason for having established our own branch there, and desire equally with ourselves to remain on the most friendly terms, working together whenever the occasion presents itself.

BANK'S PREMISES.

The developments of our business which have taken place during the last few years have naturally necessitated very considerable expenditure in the enlargement of our existing offices and the acquisition of new premises. This has proved a very difficult subject, bearing in mind the greatly increased cost of land and buildings, and you find in the present balance-sheet an increase of £208,000 in the item of premises, whilst next year the increase will be even greater. I make no apology on this point, however, for experience has taught us, more especially in connection with our London office and our Buenos Ayres branch, that expenditure in this direction, although large, if undertaken with due deliberation, and more particularly if the offices are in an excellent position and of an ample type, is a great factor in assisting our managers in their efforts to develop the business and increase the profits.

We are making an addition to our head office in Old Broad street, and we have also secured premises in the rear, which will hereafter, we hope, be incorporated into the building, and give us, so far as we can foresee, as much accommodation as we are ever likely to require. We have bought buildings in the best part of Paris at the corner of Rue Scribe and Rue des Mathurins, which answer the same description. In Valparaiso we are rebuilding on the site of our former premises an edifice which will include a number of offices for letting purposes, and in Santiago we have purchased a corner site of ample dimensions in the very heart of the city. We have secured in Bradford a very central site, and are building thereon premises suitable for our purpose, and in which we shall also have some offices to let.

BALANCE-SHEET FIGURES.

You will like me to refer to the figures in our balance-sheet, and I will do so very briefly. Speaking generally, the figures show an increase, which, while it may in part prove only transient, can, I think, be regarded as extremely satisfactory. The confidence of our clients is evidenced in an increase of current and deposit accounts from £42,000,000 to over £58,000,000. The business done for our merchant friends in the form of credits totals £5,400,000, as compared with £3,000,000 last year, whilst the bills received for collection total £7,800,000, as against £3,400,000. The capital account, owing to the issue of additional shares last year for cash, and also for new shares in exchange for those of the British Bank, now stands at £4,364,520, and the reserve fund has been increased from £1,750,000 by (*a*) the premium of £4 per share on 150,000 new shares—£600,000, and (*b*) premium on shares issued to the British Bank shareholders of £5 on 272,904 shares, thereby giving a total of £3,714,000. With the addition which we now propose out of our year's profits, the reserve will amount to no less than £3,850,000. On the other side of the account we find that the cash now approaches to £28,000,000, bills receivable £20,000,000, and securities £7,000,000, making a total of £54,000,000, or over 70 per cent. of the total of our liabilities to the public.

"STRENGTH AND A LIQUID POSITION."

These are days in which we regard strength and a liquid position as being of even more than usually paramount importance, and I am sure that you will agree with us that this factor must be considered in preference to that of an increase in our earning power. I do not suggest by this that the increase in our earning power is not entirely satisfactory. I think you will regard it as such, the amount being nearly double what it was last year, notwithstanding the very heavy, but inevitable, increase in expenses, and the fact that we have not had the use of the increased capital for the whole year. I would, however, repeat what has been said on many former occasions—that I sincerely trust you will not regard any future balance-sheet as unsatisfactory if we are unable to maintain the earnings at this high level, because, now that peace is re-established, many more banks have been attracted to South America, and competition is becoming very keen. On the other hand, we shall have next year the advantage of receiving a full year's dividend on our holding of shares in the British Bank, whereas on the present occasion we have merely taken into credit an interim dividend of 5 per cent., the net amount of which on our holding of shares was £33,000.

BANK'S PROGRESS.

To enable you to judge of the progress of our business in recent years, a comparative statement is attached to the balance-sheet, and I trust that you feel quite satisfied with the growth of our business as evidenced therein. We have also sent you a statement showing the combined figures of this bank, the British Bank of South America, Limited, and the Commercial Bank of Spanish America, Limited, in order that you may be able to gauge without difficulty the importance of our present ramifications. You will observe therefrom that the total assets of the three banks amount to 130 million pounds, of which 62 million pounds is in the form of cash and bills receivable; on the other hand, the balance of deposit and current accounts is over 80 million pounds.

I will not refer to the highly appreciated services of our staff, as that matter will be dealt with in a subsequent resolution to be proposed by our vice-chairman, Sir Robert Harvey.

I now have the pleasure to move the following resolution :—"That the report and balance-sheet as distributed be adopted, and that final dividends of 9s per share, less income-tax, on 722,904 old shares and 7s 2½d per share, less income-tax, on 150,000 new shares, be and are hereby declared, both payable on the 27th inst."

The Vice-Chairman (Sir Robert Harvey) : I have great pleasure, ladies and gentlemen, in seconding the proposal of our chairman.

The Chairman : Has any shareholder any remarks to make? Apparently none, and I will therefore put the resolution to the meeting.

The resolution was then carried unanimously.

Baron Emile B. d'Erlanger : I beg to move the re-election as a director of this bank of Mr Alfred George Gumpert. Mr Gumpert has been a resident in the Argentine for many years, and a partner of one of the most active and respected firms there. I have known him myself and his firm for many years, having had the privilege and honour of being in many transactions closely associated with that firm. His re-election, I am sure, will commend itself to all the shareholders, and I have great pleasure in moving the resolution.

Mr Charles E. Gunther : I have much pleasure in seconding that.

The motion was unanimously approved.

Mr H. W. Patrick : Gentlemen, it is my pleasure to propose, "That Mr William Herbert Hollis, one of the retiring directors, be and is hereby re-elected." I think I need say very little about the qualifications of Mr Hollis, because they are well-known to you all. As managing director of the British Bank of South America, he has undoubtedly gained very considerable experience, and I am sure he will be a great help to us on the board of the Anglo-South American Bank. I propose that he be re-elected.

Mr Thomas Woodsend : I have much pleasure in seconding the resolution.

The resolution was carried unanimously.

Mr Edward Bunge : I beg to move, "That Sir Clarendon Golding Hyde, one of the retiring directors, be and hereby is re-elected."

Mr A. de Lantsheere : I beg to second that.

The resolution was passed unanimously.

The Chairman : We have now to re-elect the auditors, and perhaps some gentleman will kindly move a resolution on that matter.

Mr T. A. Leigh : Ladies and gentlemen, I have been asked to move the following resolution : "That Messrs Price, Waterhouse and Co. be and are hereby reappointed auditors for the year ending June 30, 1921, at a fee of £750." I do not consider that is a large amount, in view of the great turnover of this bank. The name of Price, Waterhouse and Co. is well known to us, and I am sure we could not have our accounts in better hands. While on my feet I should just like to say how satisfied I am with the work of the directors, and I should like to express my warm thanks to them for the way in which they have conducted the affairs of this bank for many years past. They have our utmost confidence, I am sure.

A Shareholder : I beg to second that.

The resolution was unanimously passed.

TRIBUTE TO STAFF.

The Vice-Chairman (Sir Robert Harvey) : Ladies and gentlemen, I wish to pay a special tribute to the aid your board has received from the staff at home and abroad. Indeed, it is in a great measure

due to the loyal and ample efforts that the bank has attained its present position. Now that travelling across the ocean has again become easy, our officers abroad are able to resume the furlough arrangements which were practically stopped for five years, and this conduces not only to the enjoyment and comfort of the individuals, but to the best working of the bank by enabling the resumption of personal discussion on many points of common interest. The facility for travel by earth, sea, and air has enabled one of our general managers, Mr Kiek, to take a trip to South America, which he has never before visited, and thereby to add experience of that continent to his already wide knowledge of European banking. Ladies and gentlemen, it is invidious to particularise, and I can only say, as I do with sincerity, that we are most deeply indebted to our general managers, managers, and all our officials and employees at home and abroad for their loyalty and devotion, which I feel is not excelled, and seldom equalled, in any other institution. I have, therefore, special pleasure in proposing a very hearty vote of thanks to the staff for their services during the past year, and when it has, as I am sure will be the case, been carried by acclamation, I will ask Mr Wells, one of our general managers, and Mr Nation, our inspector in Chile, to both of whom we are greatly indebted, to respond to this vote.

The motion was seconded by Sir Clarendon Hyde, and supported by Mr E. E. Barclay.

The vote was unanimously accorded.

MR WELLS'S REPLY.

Mr W. E. Wells (one of the general managers of the bank) said: Mr Chairman, ladies and gentlemen, it gives me the greatest pleasure to respond, on behalf of all at head office and abroad, to the very kind remarks the vice-chairman has just made regarding the services rendered by the members of the staff of the Anglo-South American Bank. Also, it is my desire to endeavour to express the appreciation which will be felt by every one at this public recognition of their efforts. Loyalty to the bank has always been the watchword of our institution; and I can assure you, sir, that in South America, we always felt it an honour to be in the service; we gratefully realised the acknowledgment given to faithful work, as well as the generous treatment accorded. Here at head office I find the same spirit prevailing. The inspiring influence which emanates from yourself and your colleagues on the board acts as a direct incentive to every one, from highest to lowest. It is an influence which makes each one feel that he is indeed a live factor in the organisation, possessing a personal interest in the progress and success of the bank. In these matters I speak with experience, for I am one who has grown up with the bank; I have spent a considerable number of years in the foreign service, and passed through the various stages. I cannot but feel that my appointment last year as one of the general managers in London must serve as a still further incentive, proving as it does that the way to the higher positions is open to all. It is with a very keen sense of all we owe to the direction of the bank that I tender, on behalf of the staff, their hearty appreciation of your kind words, which, believe me, sir, will afford much gratification to my colleagues, both here and abroad.

Mr Howard Nation (inspector of Chilean branches): Ladies and gentlemen, as a shareholder, and also a member of the bank's staff abroad, it is a double privilege for me to attend this meeting, and I will ask our chairman to allow me to add a few words to those of my friend Mr Wells, in reply to the kind vote of thanks to the staff which you have just passed. To those of us whose duties keep us at a distance from the homeland it is cheering to know of the real interest taken in us by you, and I feel sure you will be gratified to hear that the bank is famous abroad as well as in London for generous treatment of its staff. It is everywhere remarked that the shareholders of this bank, through our directors, seek to anticipate the needs of their employees, and thus you put into a material form the sentiment expressed in the annual vote of thanks. I would like to say that this attitude on your part is responded to by the staff abroad, for whom especially I speak, by whole-hearted and enthusiastic service. It is no uncommon thing to hear even the juniors speak with evident pride of "*our* bank," and it would be hard to find an institution where the work is more conscientiously and more willingly done. In sailing back to Chile to-morrow, I shall take with me very warm recollections of this meeting, and shall convey to my colleagues your very kind vote of thanks, for which I sincerely thank you on their behalf.

VOTES OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr J. Welch: Ladies and gentlemen, the figures of the balance-sheet which we have been considering this afternoon must, I am sure, have brought great satisfaction to all concerned, and the tabulated comparative statements, supplemented as they have been by interesting details and figures in the chairman's speech, reflect the greatest credit on the administration of this bank. It has been, I think you will agree with me, no light task to steer so great a financial bark as the Anglo-South American Bank has now become through the perilous waters of recent times, and that this has been achieved so successfully demonstrates most clearly that we have had a most skilful skipper at the helm, who, with his colleagues, must have responded with might and main to those exigencies with which they have been daily faced. It is therefore with the greatest pleasure that I rise to propose a vote of thanks on behalf of this meeting to the directors for their services during the past year, and a special vote of thanks to the chairman for so ably presiding over our proceedings to-day.

Mr Waters: I have pleasure in seconding the vote of thanks to the chairman and directors.

The vote was passed with acclamation.

The Chairman: Ladies and gentlemen, on behalf of my colleagues and myself, I thank you very sincerely for the acclamation with which you have received the resolution proposed in such felicitous, though rather flattering, terms by my friend, Mr Welch. It is very cheering to the directors to meet with encouragement in that form of resolution rather than with criticism, which at times they feel they might be subjected to even in most prosperous days. We thank you most sincerely.

The proceedings then terminated.

COLTNESS IRON COMPANY, LIMITED.

SATISFACTORY YEAR—INCREASED PROFIT.

The annual general meeting was held on Thursday, 14th instant, within the registered office of the company, 138 West George street, Glasgow.

Mr Robert Russell, the chairman of the company, who occupied the chair, said that the report before them showed that the past year has been a satisfactory one.

THE PROFIT.

The gross profit for the year, after making provision for liabilities under the Finance and Coal Mines Acts, amounts to £248,032, as against £182,102 in the previous year. After writing off £49,309 for redemption and depreciation and placing a further sum of £3,500 to the suspense account for depreciation of the value of the special reserve fund investments, there remains a net profit for the year of £195,222, as against £136,667 in 1919.

REPAIRS OF FURNACES AND AMMONIA WORKS.

Owing to the continuous working of the furnaces and ammonia works during the war, he said it was impossible to get the necessary repairs executed, and eventually work had to be stopped completely for a time to get these done, which cost £26,326, and to meet this expenditure they had set aside £20,000 to the credit of the relining, &c., reserve fund, instead of the customary £3,000, to £5,000.

After deducting this £20,000 and adding the sum brought forward from the previous year of £14,789, there is a balance left of £190,012.

DIVIDEND.

Interim dividends have already been paid on the first and second preference shares, and on the ordinary shares amounting to £28,625, leaving a balance of £161,387, which the directors recommended should be dealt with as follows:—

(1) In payment of dividends on the first and second preference shares for the second six months of the year, £12,875.

(2) In payment of a further dividend of 3 per cent. and a bonus of 4 per cent. on the ordinary shares, absorbing £36,750, thus making a total distribution of 10 per cent. on the ordinary shares for the year.

(3) Increasing the "ordinary reserve fund" by £95,000, and leaving a balance of £16,762 16s 4d to be carried forward.

The increasing of the ordinary reserve fund by the sum of £95,000 was necessary owing to the ever-increasing cost of labour and material to enable development work to be carried on in the various departments of the business which were so long delayed owing to the war.

BLAST FURNACE DEPARTMENT.

With regard to the blast furnace department, which includes, besides pig-iron, the by-products of sulphate of ammonia, tar, oils, and Portland cement, the prices realised for all of these products were considerably better than in the previous year, which was a very poor one. He regretted to say that the production of the furnaces is still very adversely affected owing to the want of hard coal.

COLLIERIES.

As to the collieries, the production over all has been about 12 per cent. greater this year than in 1919, but the number of men employed has been about 22 per cent. more. The output per annum per person employed in 1919 was 263 tons, whereas in 1920 it was only 243 tons, this being accounted for by the fewer working hours per shift, which came into force in July, 1919. He mentioned here that in the year 1914 the output of the company's pits per annum per person employed was 316 tons, so that the decrease in output

per annum per person employed between pre-war and now is 73 tons, or 23 per cent., and further, that if the number of persons they now employ were each producing as much coal as they did in 1914, the output per annum would be greater than it is now by about 240,000 tons.

KINGSHILL COLLIERY, FOUNDRIES, AND ALQUIFE MINES.

With regard to the new colliery at Kingshill, the output there is now up to about 8,000 tons per month, but until houses for the workers are provided, there was no prospect of any further increase.

With regard to the foundries, notwithstanding a large expenditure during the past year in extending the steel foundry, the production has not increased, owing to the scarcity of skilled labour.

As to the Alquife Mines, owing to the continued failure of the railway company to transport ore in sufficient quantities from the mines to the loading pier at Almeria, the tonnage shipped has been only 55 per cent. of the shipments in 1919, and the financial results have, therefore, suffered.

WARWICKSHIRE COALFIELD.

With regard to the Warwickshire coalfield, loss of time, due to strikes and various other minor causes, has much delayed development work during the past year. There is a great scarcity of houses here, too, and in consequence there is a shortage of skilled labour. The output now is between 6,000 and 7,000 tons per month, but, with an adequate supply of labour and material, it will gradually increase.

THANKS TO HEADS OF DEPARTMENTS.

The Chairman said he could not close his remarks without referring to the splendid services of every one of the heads of the various departments, who spare no pains or time in furthering the best interests of the company, and whose duties are very difficult in these days of so much labour unrest, and considered that the shareholders were greatly indebted to them for the excellent results of the year.

The directors' report and balance-sheet as at July 31st last were adopted, and the retiring directors, Sir Henry H. Houldsworth, Baronet, and Mr Henry F. Gordon, were re-elected.

The auditors, Messrs Kerr, MacLeod, and Macfarlan, were reappointed, and the usual vote of thanks terminated the proceedings.

HARRISONS AND CROSFIELD, LIMITED.

SATISFACTORY RESULTS—INCREASED PROFITS.

MR HEATH CLARK ON THE POSITION OF THE RUBBER AND TEA INDUSTRY.

WORLD FINANCIAL AND TRADE CONDITIONS.

The twelfth ordinary general meeting of Harrisons and Crosfield, Limited, was held, on the 21st instant, in the Council Room of the Rubber Growers' Association, 38 Eastcheap, London, Mr Charles Heath Clark presiding.

The secretary (Mr E. C. Cleveland-Stevens) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—At the request of my colleagues I am occupying my old position in the chair to-day, owing to the enforced absence through illness of Mr Croll, who became our chairman shortly after the conclusion of the Armistice. The great and incessant strain of the past half-dozen years has necessitated his taking a somewhat prolonged rest; but you will be glad to know that he is making satisfactory progress towards recovery. We are hoping before long to welcome him back to business and enjoy once more the advantage of his great ability and industry in connection with the affairs of the company.

It is a great pleasure to me to be in the position to congratulate you to-day upon what I feel sure you will regard as the very satisfactory result of the year's working, for, notwithstanding many difficulties arising out of the disturbed conditions prevailing, our total net earnings amount to £249,203 15s 4d, as against £200,571 8s 8d a year ago.

It may be of interest to you to note some of the changes that have occurred in the balance-sheet during the year under review.

INCREASE OF CAPITAL AND LIABILITIES.

The share capital has been increased under three headings. Firstly, we issued 19,000 6 per cent. cumulative preference shares in payment for some property we acquired; secondly, as you will remember, we issued 400,000 preferred ordinary shares in December last at a premium of 6s 6d per share; and, thirdly, we have during the year allotted 20,610 deferred ordinary shares. These last-mentioned shares have been allotted and paid for, in accordance with the articles of association, out of the profits accruing to the holders of the deferred ordinary and management shares—an arrangement which ensures a proportion of our earnings being retained to strengthen the capital position of the company.

A year ago the general reserve fund was brought up to a total of £315,000. We have now added to it £111,078, being the net amount of the premium on the last issue of preferred ordinary shares, and we propose adding £13,922 out of the year's profits, thus bringing the reserve up to £440,000, equivalent to about 24 per cent. of the share capital.

The mortgages on freehold property have been reduced by £23,000, and we anticipate making a further reduction of a similar amount during the present month.

The amount of money deposited with the company shows an increase of £215,000, and the total due to sundry creditors is about £140,000 more than a year ago; but, on the other hand, our bank overdrafts have been reduced by over £100,000.

PROPERTY AND ASSETS.

Freehold and leasehold property stands in the balance-sheet at nearly £400,000 more than it did last year. Reference was made then to the building of new warehouses and factories in Colombo. These are now nearly completed, and are partly occupied. They are probably the finest buildings of the sort in Ceylon, and will enable us to undertake additional business, which our previous accommodation did not permit. We have during the past year availed ourselves of several favourable opportunities of acquiring land, partly with a view to the erection of buildings necessary for the further expansion of the business. This expenditure involves a lock-up of capital, from which no revenue has yet been derived.

We have also had to spend considerable sums on the erection of bungalows for our staff in the East. The housing problem for Europeans appears to be as acute there as it is at home, and at some of our branches the only means of providing the necessary accommodation has been to build for ourselves.

There is no difference worth commenting on in the plant, machinery, and furniture items in the balance-sheet.

In our stocks there is an increase of about £50,000, which is not surprising considering the general advance in values and the rise in the exchange value of the rupee as compared with that of a few years ago.

Loans to companies show a reduction of about £170,000, but the bills recoverable amount to £88,000 more, and sundry debtors to £311,000 more than a year ago. The total of book debts is, in fact, higher than it has ever been before—a fact that is accounted for by increased business and higher prices.

The investments stand at about £220,000 more than in June, 1919. Our investments are valued at cost price or under, and it is very satisfactory that, notwithstanding the present "slump" in the prices of tea and rubber, the total market value of our invesments to-day is largely in excess of the figure appearing in the balanec-sheet.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, our net earnings for the year under review amount, as I have already stated, to £249,203 15s 4d, to which there has been added the balance of £36,147 11s 4d brought forward from last year, making the total amount of distributable profit £285,351 6s 8d. Out of this amount we have already paid the entire dividends for the year on the cumulative preference and preferred ordinary shares, amounting respectively to £37,230 and £80,000. We have also paid the fixed dividend on the deferred ordinary and management shares, amounting to £19,637 12s 8d, and have divided a further sum of £51,412 18s between the holders of those two classes of shares. The balance of profit now remaining is £97,070 16s. Out of this we propose to transfer £13,922 to the general reserve, as already mentioned, and to allocate £11,000 to the payment of the annual bonus to the staff, and from the balance then remaining we propose to distribute £34,275 5s 4d among the holders of deferred ordinary and management shares, leaving to be carried forward the sum of £37,873 10s 8d

BOARD OF DIRECTORS.

During the year the board of directors has been further strengthened by the addition of Mr H. O. Peake, who entered the service of the company in 1908, and for some years acted as our secretary.

Subsequently Mr Peake spent some years in Australia in the interests of the company, and, now that he has been able to return to London, we are very glad to have the added strength which his presence on the board gives us. We shall ask you later on to confirm his appointment. During the past year three members of the board, Mr Welch, Mr Macfadyen, and Mr MacColl have paid visits to our Eastern branches, and we are very much indebted to them for the services they have rendered the business in this connection.

TRIBUTE TO STAFF.

I also wish to mention again this year the loyal support which we have received from the members of our staff, both here and abroad. It has been once more in many respects a difficult and strenuous year, and without their wholehearted co-operation the results of our efforts could not have been of the same satisfactory nature.

POSITION OF THE RUBBER INDUSTRY.

You will now probably expect me to make a few remarks upon the present position of the rubber and tea industries in which this company is so largely interested.

Since our last meeting the position of rubber has undergone a great change. At that time the demand was strong and the price was rising; to-day the demand is weak and the price low, in London lower than ever before, while considerable stocks are accumulating in this country, in the East, and probably in America. This position naturally prompts the inquiry whether the actual consumption of rubber has declined during the present year. It is not possible to get reliable figures with regard to the actual consumption of rubber goods, but such evidence as is available points, I think, to an increase rather than to any decrease.

The cause of the present situation is not that consumption has declined, but that the increase in the production of rubber is at present greater than the increase in consumption, with the result that, at the end of this year, there is likely to be an accumulation of from 35,000 to 40,000 tons over the stock necessary for the working of the industry, with the possible tendency for this surplus to increase rather than diminish during 1921.

The position is aggravated and rendered more critical by financial stringency, both here and in America, making it very difficult for those who might wish to do so to carry more stock than is absolutely necessary for the actual requirements of their business.

Such a position was certainly not anticipated at the beginning of the year, when the large manufacturers were expecting a greatly increased demand, and were even apprehensive as to the sufficiency of the supply of raw rubber with which to meet it.

The causes which have prevented the materialisation of a great increase in the demand vary in different countries. Directly or indirectly, they all arise as a result of the war and from the economic disturbances accompanying the transition period through which we are passing. These causes have been well summarised in the recent circular of the Rubber Growers' Association, and there is, therefore, no need for me to refer to them at greater length here.

The financial conditions in the United States should become easier as the transport situation improves and the strain which accompanies the financing of the harvest relaxes. The adverse European exchanges, being the result of inflated currency and adverse trade balances, will probably take a longer period before reaching anything approaching normal conditions.

Under present conditions the French manufacturer buying rubber on the London market to-day has to pay more than twice as many francs per pound, the Italian has to pay from three to four times as many lire, and the German more than 12 times as many marks as he would do if his exchange were normal. Neither France nor Italy will take as much as last year, while Russia, which the year before the war took from 10,000 to 15,000 tons, and Austria, which took 3,000 tons, are still entirely out of the market. Germany before the war took over 16,000 tons, but this year it is estimated she may take about half of that amount.

Little real improvement in the economic conditions of most of these countries can be looked for until their expenditure is reduced to correspond with their revenue and the continuous inflation of currency stopped. Their political and social conditions must be stabilised and their production largely increased, for which purpose credits must be provided as a necessary condition to the restoration of their export trade.

PROSPECTS.

I fear that no great expansion in the demand for rubber is to be looked for immediately. Meanwhile the price of rubber has fallen to a figure at which many estates can only produce at a loss, and which is probably little, if at all, above the average cost to the whole plantation industry. If this situation is allowed to develop further without interference it will be likely seriously to impair the productive efficiency of the industry for the future. This is being increasingly recognised by those connected with the plantation industry, and a favourable response to the proposals of the Rubber Growers' Association for the necessary restriction of output of both British and Dutch plantations, whether controlled in Europe or in the East, now appears to be assured.

THE TEA INDUSTRY.

The position in regard to tea is of a character somewhat similar to that of rubber, with the possible exception that the need for some drastic action appears to be even more necessary.

The marked rise in prices in the late summer of 1919 continued until the early part of November, by which time common Indian tea was selling in London public sale at 1s 6¼d, but a reaction then set in as a result of abnormally heavy quantities coming from the East owing to the provision of increased shipping facilities. This resulted in the market here being flooded, and prices began a decline which has continued practically ever since.

At the end of September, 1920, the stock shown by the Board of Trade returns to have been in bond in the United Kingdom was 220¾ million pounds, against 99¾ million pounds at the corresponding date in 1913 and 143 million pounds in 1919. The decline in prices in London public sale has been extremely marked, the average price of all Indian tea having declined from 1s 9⅞d early in November, 1919, to 10½d at the close of September, 1920, while over the same period the price of common Indian tea declined from 1s 6½d to 4¼d. As against these selling prices, the probable average cost of Ceylon and Indian tea delivered in London is to-day not less than 1s 2d per pound. The prices at which lower grades are selling to-day are insufficient to cover even the out-of-pocket expenses incurred in shipping, landing and selling.

Again, we are faced with a position in which, if the future producing capacity of the tea industry is to be preserved, some united action on the part of those interested has become absolutely essential.

It appears likely that proposals may be agreed to generally by which Indian and Ceylon producers will join together in reducing the output to the extent of approximately 20 per cent., and it is to be hoped that this will prove successful, and cause prices to be maintained on a level which will, at any rate, cover the cost of production.

If Russia and other Continental countries were in a position to resume their pre-war consumption of tea, no surplus stocks would exist. This makes it the more important to take such steps as seem possible to preserve to-day the means of producing that which the world may again urgently need in the near future. It is satisfactory to note that in those countries where supplies have continued to be available consumption shows a very satisfactory tendency to increase. It is a reasonable assumption that the consumption of tea in this country has increased over 25 per cent. since 1913, and in India, where the consumption was estimated in 1913 at 20 million pounds, it is now estimated to have reached 50 million pounds per annum. When it is remembered that Russia alone in 1913 took no less than 191 million pounds of tea, I am convinced that we can safely regard the present unsatisfactory conditions as resulting entirely from the disorganisation of international trade caused by the war, which conditions are destined to change into an era of prosperity whenever the full resumption of trading becomes possible.

RESTRICTION OF OUTPUT.

As regards the restriction of output of both rubber and tea, to which I have already referred, it cannot be too clearly understood that this is a temporary measure, and one not taken with a view of increasing profits, but in order that the industries in question may be saved from the continuance of losses, which threaten to cripple permanently, and possibly in many cases ruin, the productive possibilities of the future. Rightly understood, the action proposed is intended to preserve and make it possible to increase the production of the future, and is not inconsistent, therefore, with the generally admitted theory that the way to economical recovery throughout the world lies in increased production.

NEED FOR RESUMPTION OF INTERNATIONAL TRADE.

The position which has to be met does not arise through the needs of the world having been fully supplied, but is part of the general financial situation in which we find ourselves placed to-day, when, for lack of exchange, credits and other financial facilities, one-half of the world is unable to buy what the other half desires to sell.

The great volume of international trade which has been built up so largely during the past half-century was dependent upon general conditions of peace and goodwill, and these conditions, upon which it rested, have been suddenly changed and largely destroyed by the disastrous war through which we have passed.

National interdependence remains, but the means of giving effect to this trading relationship between the countries of the world are at present lacking, and we are faced by the urgent need for mutual co-operation and the provision of credits necessary for international trading, as a preliminary to any real recovery from the wastage of the war.

In the interests of the populations of the world generally it is surely the most urgent duty of our own and other Governments to join in taking every measure calculated to promote the full resumption of international trade, and to secure the re-establishment of those conditions of peace and goodwill which are the necessary foundation of all sound finance and prosperous industry.

THE RESOLUTION.

I have now very much pleasure in proposing: "That the balance-sheet made up as at June 30, 1920, and the reports of the directors and auditors be adopted," and I will ask Mr Miller if he will be kind enough to second that. If there are any questions which I can answer, I shall be very pleased to do so.

Mr H. Eric Miller: Ladies and Gentlemen,—It gives me much pleasure to second the resolution just moved by Mr Clark. There is only one point to which I would refer, and that is that this business possesses an asset—I consider it to be its greatest asset—which does not figure in the balance-sheet, and that is the spirit of loyal co-operation which permeates the whole business in the head office and throughout the branches and the affiliated companies. We are living in very difficult times, and you can imagine what a relief it is to the directors to know that the difficulties which have to be faced will be faced in that spirit by everybody who is helping this business on. I am sure you may congratulate yourselves that that is the case. We shall do all that lies in our power that it may continue.

POSITION OF PREFERENCE SHAREHOLDERS.

Mr Mark Johnson said he would like to ask the directors to reconsider the disbursement of the available balance. He noticed that the staff were to receive £50,000 in bonuses for the year. On the other hand, the original preference shareholders were receiving not more than about 6 per cent. on their money. He hoped the directors would see their way to do something to enhance the value of these shares on the market.

The Chairman, in reply, said that Mr Johnson had put to the meeting something which was not peculiar to the position of the stock of this company, but what might be said to be pretty universal at the present time; that was to say, if they were forced to realise their investments to-day they would be faced with a large capital loss. The question as to the position of the preference shareholders might have to come before the board of directors at some future time—in fact, it had been considered before—but nothing could be done in that respect without the consent of the other classes of shareholders in the company, because it would affect their interests. The position of the preference shareholders had been somewhat improved a year or two ago, but they must realise that they were only in the same position as people who held Government stock or Trustee securities of any kind. It was obvious that those investments would not be again worth par until the price of money was easier. The Chairman further said that the total of the staff bonuses which they had paid amounted altogether to a very large sum, but with the exception of the £11,000 to which he had referred those bonuses were awarded because of the increased cost of living. In other words, they represented part of the necessary extra remuneration to the members of the very large staff scattered throughout the world. It had always been the policy of the board of directors to treat the staff liberally and well. In reply to Mr G. A. Christian, the Chairman said that the increase in investments represented fresh money. No account was taken in the balance-sheet of any enhancement in the value of the investments, which were taken at cost price or under. The acceptances apearing in the balance-sheet might be assumed to be good to the full amount.

PROSPECTS FOR CURRENT YEAR.

In reply to Mr W. L. Woodhams, the Chairman said the directors would be very glad to indicate if they could what the profits for the coming year were likely to be, but in the present state of uncertainty he was afraid the most he could say was that he had not the slightest suspicion that the profits of the business were likely to fall in such manner as to jeopardise in any way the interests of the holders of the cumulative preference or the preferred ordinary shares. He might incidentally point out that that was one advantage accruing from the way in which the capital was arranged—namely, that the directors entirely, and the staff to some extent, were paid by results. It was they who would be shot at if they had a worse year this year than they had last. He did not think there was any cause for uneasiness on the part of any of the shareholders. The investments were not by any means all in the tea and rubber industries, but they were mainly so, and from that point of view, considering the periods through which they passed, they had cause for the greatest thankfulness that the money was so invested, because to-day their investments showed a large appreciation over their cost.

The motion for the adoption of the report and accounts was carried unanimously.

The Chairman next moved: "That the following dividends be declared and paid forthwith—namely, a final dividend on 177,646 deferred ordinary shares, amounting to £17,137 12s 8d, and a final dividend on 500,000 management shares, amounting to the same amount."

Mr G. S. Townend seconded the motion, which was unanimously agreed to.

RE-ELECTION OF DIRECTORS.

Mr H. J. Welch then proposed the re-election of the retiring directors, Messrs Charles Heath Clark, G. S. Townend, and H. C. Peake. In doing so, he said that, with regard to Mr Heath Clark, he found it very difficult adequately to express the great debt which shareholders and directors owed to him for his past and present services to the company. His long and extensive experience was placed unsparingly and unselfishly at the disposal of the company, and lately he had put all of them under deeper obligation to him, because he had accepted the position of acting chairman during the enforced and regrettable absence of Mr Croll. Mr Clark, wherever he was known, was given a very deep and real respect, a respect that was paid to him not only for his unusual abilities, but also for his sterling character. With regard to Mr Townend, he was the director in charge of their tea department, which he directed with conspicuous ability and with very satisfactory pecuniary results to the company. Mr Peake was the latest addition to the board, and the chairman had dealt with his past valuable services rendered to the company both in London and Australia.

Mr H. P. Church seconded the resolution, and it was carried unanimously.

The Chairman said that he wished to thank the shareholders for their confidence in him, and to assure them that he could say the same of both his colleagues. Had things been other than they were, he had intended retiring from the board altogether at that meeting, but owing to the fact that matters were not easy at the moment, and especially the fact that their chairman, Mr Croll, was away, and would be away for a little longer yet, he felt that he did not wish to do other than comply with the desire of his colleagues that he should continue to serve the company to the best of his ability, at all events until Mr Croll was able to take his place again.

On the proposition of Mr Woodhams, seconded by Mr Johnson, the auditors, Messrs Price, Waterhouse and Co., were reappointed.

Mr J. B. Crosfield proposed a vote of thanks to the chairman.

This was seconded by Mr H. M. Knight, and carried unanimously.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

The adjourned annual general meeting of shareholders convened for Thursday, September 2, 1920, was held in the Board Room, General Mining Buildings, Johannesburg, on Thursday, September 16, 1920. Mr Arthur French presided.

The Chairman, in moving the adoption of the report and accounts, said:—The report and accounts before you reflect in a general way the operations of the corporation for the past financial year, but I think I am justified in saying that the actual results are not so unsatisfactory as a cursory glance through the accounts might at first indicate. Although the net profit for the year shown by the profit and loss account is only £5,116, it will be observed that this is arrived at after writing off £20,568 in respect of loss on mining ventures, representing the book value of some 500 claims on the Western Rand, which we have held for many years, but which, owing to the closing down of producing mines in the neighbourhood, we decided to abandon. Moreover, as will be seen on reference to the directors' report, the depreciation on our shares and investments, on the basis of market quotations at the date of the balance-sheet, reflects a decrease of £40,096 in comparison with the position at the close of the previous year. In other words, we were really in a better position to the extent of £65,780 at December 31st last than at the end of the preceding year.

Continuing the review of the accounts, I will make the usual analytic comparison of the balance-sheet with that for the previous year. Deposits at £34,333 reflect an increase of £13,188, representing further funds placed on deposit with us by a company in which we hold the whole of the share capital. Creditors for stock bought (since paid for) show an increase of £6,044, and sundry creditors an increased liability of £17,415, which has been liquidated since the close of the year. House property reserve account is decreased from £70 000 to £55,425 by the loss of £14,575 on properties realised during the year; these properties were purchased many years ago, when the cost of ground and building was exceptionally high. Appropriation account is increased by £5,116, the net profit for the past year, and now forms an unappropriated credit balance of £79,788. Dealing with the credit side of the account, stocks and shares in our own

companies show a small increase of £4,905, representing purchases (on balance) during the year. Our holdings in shares in other companies also reflect an increase of £42,406, in respect of investments in certain mining companies here and abroad. We have also added to the slight extent of £2,447 to our debenture holdings. Mining properties, claim holdings, and house property account reflects a decrease of £46,114, which is made up almost entirely of the book value of the claims on the West Rand now abandoned, and of the house property sold—to both of which items I have already referred. Advances against security show a decrease of £14,176. The largest change is in respect of the next item in the balance-sheet, sundry debtors, which exhibits an increase of £153,401; this for the most part is represented by our loans to the Roodepoort United during the year, to enable that company to make very substantial repayments on account of its liability to the bank, and by further advances to the Aurora West, both of which we hope eventually to recover. The only other item calling for attention is cash at bank, &c., which at £46,319 shows a diminution of £116,542; this, of course, is accounted for by the loans to which I have just referred. The details of the profit and loss account call for little comment, as, with the exception of the loss of £20,568 on mining ventures, already mentioned, there is no change of importance as compared with the previous year.

In referring to the labour situation, he said: I only want to deal shortly with the fact, as shown by the actual returns from the mines, that a decided improvement in efficiency has taken place during the last few months since the retrenchment policy was brought into effect. To this increased efficiency, coupled with a better spirit of co-operation, is due largely the somewhat remarkable conversion of the previous appreciable monthly working losses into working profits, which, although not as substantial as could be desired, are, at any rate, encouraging. Now, the point I want to make is that the reduction in the number of our white employees and the better efficiency given by those still at work has been responsible for the continuance of operations on three of our producing mines. In other words, the closer co-operation and improved efficiency now in evidence have saved throwing out of employment some hundreds of our white employees. Surely these instances form the strongest argument in favour of the men putting forth honest efforts in their work—if not for the sake of their employers, still for the benefit of themselves, their dependents and their fellow-workers?

We have continued to suffer from a shortage of native labour during the past year, and the scarcity is even more pronounced at the present moment. It is, I think, becoming increasingly evident that the native labour supply available in the Union is wholly inadequate to meet the demand. Apart from the mining industry, other industries which existed prior to the war have expanded in recent years, and new industries are constantly springing up, with the result that the pinch is being felt by all of us, not even excluding the farmers.

The motion adopting the report and accounts was seconded by Mr S. Benning and carried unanimously, and the usual formal business concluded the proceedings.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

INCREASED PROFITS.

The fortieth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 21st instant, at Winchester House, London, Lord Ribblesdale presiding.

The Chairman, in moving the adoption of the report, said that the result of the year's business was, on the whole, satisfactory. The general railway earnings and the coal earnings showed an increase which followed on a greater output. These, put together, were higher than the company had had in any preceding year, but, unfortunately, there was also a higher total expenditure. During the year under review the cost of all necessary stores had steadily advanced. He desired to correct a mistake that had been made by certain newspapers, and to state that the Government had decided not to buy the company's line in 1921, and their next opportunity of doing so would not occur again until 1931. In the collieries the outturn had shown an improvement on the low level of 1918-19. In the current year there was a further advance. In view of the very low stocks at the beginning of the year the manager did not push sales, so that both the quantity sold and the income from sales showed a slight decrease on the previous year's figures. The whole of these declines had been more than compensated for by the increase in the profit on exchange. In an exhaustive report on the company's collieries, Mr Harris stated that the whole of the mines were in good condition, and that the only difficulty was with regard to labour.

Dealing with the balance-sheet, he said that they had sold, with great regret, some of their holding in the Assam Oil Company. Their company, with a progressive policy and expanding interests in various directions, was necessarily in frequent need of fresh capital, but the market conditions were such that the board came to the conclusion that the better policy was to get along as best they could and wait for better times. To meet requirements they sold the Assam Oil shares. The question of the company's finance was occupying the board's consideration, and they hoped, in due course, to decide upon a policy which would be in the best interests of the shareholders. The result of the year's business was that there was a profit of £110,000 to divide, as compared with £106,000 last year. The board had met the dividends on the preference shares and the debenture interest, and had paid an interim dividend of 2 per cent. on the "B" stock. They now recommended a dividend of 3 per cent., making 5 per cent. for the year.

Mr George Turner, M.E., seconded the resolution, which was unanimously adopted.

HOVIS, LIMITED.

INCREASE OF CAPITAL APPROVED.

An extraordinary general meeting of Hovis, Limited, was held, on the 20th inst., at Caxton Hall, London, to consider a resolution to increase the capital to £550,000 by the creation of 250,000 additional ordinary shares. Mr J. Browne-Martin presided.

The Chairman, in moving the resolution, said that it was proposed to offer to the shareholders, as soon as possible, 100,000 ordinary shares at par. These shares would be offered in the first instance in proportion to two ordinary shares to every three ordinary shares held, but some of the ordinary shareholders might not be enabled to take advantage of the opportunity of applying for the shares. In this case the preference shareholders, debenture-holders, customers, and the public would be considered. The chief reason for the increase of capital was because the purchase of the shares of Marriage, Neave and Co., Limited, was completed on Tuesday. The directors were confident that the new purchase would materially add to the profits of the company when the control by the Ministry of Food was past. The remuneration attaching to the new property provided a fair return on the company's outlay and a reasonable margin for reserve. In the event of the ordinary shareholders not taking all they were entitled to, the directors and their friends were applying for 50,000 shares, which showed their confidence in the matter. The remuneration which the Hovis Company already obtained from the Ministry of Food, and that which would be obtained in respect of the purchase of Marriage, Neave and Co.'s shares, would permit of the maintenance of the dividend on the ordinary shares at the rate which was paid for the year ended March 31st last and the placing of £20,000 annually to reserve, or to be otherwise applied. The present remuneration allowed by the Government was neither adequate nor equitable. At a general meeting of British and Irish millers held about a month ago an adjustment of remuneration was foreshadowed.

On March 31, 1919, which was the last date at which the company's accounts were settled with the Ministry of Food, the company's reserves stood at £100,000, and by the present time that amount would be augmented. The directors felt that they were justified in considering the capitalisation of certain of the company's reserves, to be distributed among the shareholders when the control by the Food Controller was suspended, and it was anticipated that this would take place next year. It was expected that prices would shortly fall, and then they would expect to be "on their feet" again, when the directors had very little doubt that the company would show a good measure of prosperity.

The Managing Director (Mr T. C. Fitton) seconded the resolution, which was unanimously adopted.

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank)

Capital and Reserves about Fmk.238,000,000.

EVERY DESCRIPTION OF BANKING AND EXCHANGE BUSINESS TRANSACTED.

Telegraphic Address: Kansallispankki Helsingfors.

HOLYROOD RUBBER, LIMITED.

INCREASE OF CAPITAL APPROVED.

The annual general meeting of the shareholders of Holyrood Rubber, Limited, was held, on the 18th instant, at the registered offices, 7 Martin's lane, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Among the liabilities you will notice that sundry creditors stand at a considerable figure, due to the inclusion of the amount payable for the Bukit Rhona and Tulloch estates—a liability that has since been discharged. On the other side, the assets have been increased by the acquisition of these properties, and you will observe that a reduction of £2,000 was obtained from the original purchase price. At the book cost of £43,000 there is no doubt whatever that the company has made an excellent investment, which will appreciate steadily in value as the trees mature. We have also added to our assets an up-to-date and fully equipped factory at a cost of £4,000, which is considerably less than would be required to build and equip such a factory to day.

In December last the financial position of the company was carefully considered by the board. I do not think any of us then anticipated that we should so soon experience such a serious fall in the price of the commodity; on the contrary, it was the general feeling that prices were more likely to move upwards than in the opposite direction. The recommendations of the Rubber Growers' Association are the result of a thorough examination of the position from all aspects, and represent the considered opinions of those in a position to weigh up the merits and demerits of the various schemes propounded. I am confident that, if heartily supported, they will in due course have an appreciable effect on the rubber position.

Having regard to all the factors, it is impossible to avoid a further increase of capital. The proportion, as you will observe, is one new share in respect of each four shares at present held, and in fixing the price of issue at £2, which is considerably below the market price of the company's shares even at the low valuations ruling to-day, the directors hope all shareholders will appreciate the advantage of exercising their rights if they can possibly do so.

Mr Cecil de Winton seconded the motion, which was unanimously adopted.

An extraordinary general meeting was afterwards held, at which a resolution was unanimously passed increasing the capital of the company from £60,000 to £75,000 by the creation of 15,000 additional shares of £1 each, ranking in all respects *pari passu* with those already existing.

† Rates lowered ½% on Jan. 2, 19 8, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5½ on April 15, 1920.
‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 19 9, and 5½% on April 15, 1920.
* Changed from 4⅜% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½% and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold	32,069	Total declared value of exports registered in the week	5,175,104

Messrs Samuel Montagu and Co. write as follows on October 21st:—"Gold: The Bank of England gold reserve against its note issue is £121,678,085, an increase of £6,680 as compared with last week. It is reported from New York that $16,050,000 in gold has been received in that city from London, and that $10,000,000 in currency (gold or silver not stated) has been shipped to Cuba. A fair amount of gold came into the market this week, and was taken for New York, with the exception of a small amount for India. The following figures present the gold imports and exports by the United States of America during the year 1919, expressed in dollars:—

	Imports.	Exports.
Contained in domestic ore and base bullion	..	20,719
Contained in foreign ore and base bullion	16,744,430	..
Domestic bullion refined	..	122,055,164
Foreign bullion refined	33,183,373	..
United States coin	11,244,897	245,496,208
Foreign coin	15,361,346	613,157
Totals	76,534,046	368,185,248

Silver: The market has not been robust, and prices pursued their downward course until 50½d was reached on the 19th instant. Supplies for cash and forward delivery were equally obtainable on that day, and on the day before, so that the premium for immediate delivery disappeared, but it was re-established yesterday. Some reaction, temporary at any rate, was likely to set in after so pronounced a descent. The cash price had fallen almost continuously from 59½d, at which it was fixed on September 25th. A powerful lever was the partial collapse of the Indian exchange, which incidentally added exports from that country to the already rather super-abundant supplies. Hence, as soon as a degree of steadiness in that exchange became apparent, the silver market picked up heart, bears covered, and some legitimate demand—held in abeyance whilst the outlook seemed so heavy—showed itself. As a result, prices for the respective deliveries rose 2¾d and 2⅝d from the lowest reached during the week. The real elements, however, that rendered the silver position unsteady have not been removed. The partial failure of the monsoon throws its shadow over the Indian exchange, and no real outlet for silver is in sight, except China, which is still lamenting the lack of export business. Had the Consortium decided to assist China with loans, the outlook might have been improved. The fall in silver has taken place, notwithstanding the marked weakness of the United States exchange, owing to the fear of the coal strike and its actual occurrence. The following figures present the silver imports and exports by the United States of America during the year 1919, expressed in dollars:—

	Imports.	Exports.
Contained in domestic ore and base bullion	..	6,693
Contained in foreign ore and base bullion	74,073,332	1,252
Domestic bullion refined	..	186,533,723
Foreign bullion refined	8,382,030	23,644,997
United States coin	1,057,135	21,224,827
Foreign coin	5,897,521	7,609,559
	89,410,018	239,021,051

It may not be generally known that the quality of the Siamese silver coinage has been reduced to 500 fine. The figures relating to the constitution of the Indian paper currency reserve on October 15th last record a revaluation of the gold and sterling holdings in the reserve at the new statutory ratio of Rs 10=£1. This revaluation was made in pursuance of the provisions of the Indian Paper Currency Amendment Act, 1920, which came into effect on the 1st instant. The deficiency revealed by revaluation has been covered by an increase in the securities (Government of India) held in the reserve. As a consequence, the proportion of the metallic reserve—to the total note circulation—which stood as high as 59.7 per cent. on September 30th, is now calculated at only 51.7 per cent. We have yet to learn what has become of the very large profits made by the Government gold sales, which have now come to an end, and (so we are informed) are not likely to be renewed. We understand that the Government has no intention of recommencing the sale of reverse councils in order to stem the recent remarkable fall in the sterling value of the rupee.

No rupees were coined during the week ending 15th instant. The stock in Shanghai on the 18th instant consisted of about 36,400,000 ounces in sycee, 26,500,000 dollars, and 1,210 bars of silver, as compared with about 36,200,000 ounces in sycee, 23,000,000 dollars, and 650 bars of silver on the 9th instant. The Shanghai exchange is quoted at 5s 3d per tael."

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and corresponding periods in previous years are as below:—

MOUNT MORGAN.—Cable: "For four weeks ended October 17th —Treated 8,913 tons Mount Morgan ore, 1,036 tons Many Peaks ore, 5,697 tons concentrates, an 25 tons of purchased ore and secondary products; produced 540 tons blister copper, containing 532 tons copper and 7.695 ozs gold, including 15 tons copper and 8 ozs gold from Many Peaks; also 6 tons of copper and 1 oz gold from purchased ore and secondary products. Concentrator treated 16,236 tons ore for a production of 6,102 tons of concentrates, containing 306 tons copper and 4,283 ozs gold. In addition have matte on hand containing 24 tons copper and 362 ozs gold."

Reports and Notices.

GOVERNMENT STOCKS, &c.

NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the October instalment of the debt service in accordance with the arrangement of May 25, 1912.

BANKS.

NORTH OF SCOTLAND AND TOWN AND COUNTY BANK.—The report for the year ended September 30, 1920, states that the profits, after meeting all bad and doubtful debts and making provision for writing down investments (taking at cost National War Bonds and Exchequer Bonds, which are payable at par or at a premium within four years and all other securities at the prices ruling at September 30th), amount to £152,645, to which falls to be added the balance brought forward, £88,460, together £241 105. The directors have appropriated this as follows: dividend at the rate of 16 per cent. per annum, paid, less tax, £36,512; to pay a dividend at the rate of 16 per cent. per annum on November 5th next, £36 512; income-tax on dividends, £31,296; in reduction of heritable property, £5,000; bank buildings, £5 000; to officers' superannuation fund, £5,000; to depreciation on investments, £50 000; leaving to be carried to next account, £71,785. The profits have been affected by the new corporation tax, the increase in salaries paid to staff, and depreciation which has taken place in the value of practically all securities of a general character.

SWISS BANKING ASSOCIATION.—This institution has taken over the Banca Svizzera Americana in Locarno and Lugano, thus extending its sphere of activity to the Canton of Tessin. This means that the bank will now be represented in the Southern part of Switzerland, close to the Italian frontier. The Union de Banques Suisses (Swiss Banking Association) has a paid-up capital of 70,000,000f, and reserves amounting to 15,000,000f.

TEA AND RUBBER.

SINGAPORE UNITED RUBBER.—The report for the year ended June 30, 1920, states that the output of dry rubber was 525,133 lbs, as compared with 461,693 lbs previous year; 138,857 lbs have been sold in London at an average gross price of 2s 1.55d per pound and 259.651 lbs in Singapore at an average gross price of 2s 0.11d per lb. The net price realised of 1s 11.30d per lb compares with 1s 6 99d per lb last year. The output for the first two months of the current year was 120,000 lbs. Expenditure upon development amounted to £1,233, and that upon buildings and machinery to £354. All general expenditure, both in Singapore and in London, has been charged against revenue. The revenue was £48,803, and the revenue expenditure £38 398, leaving a profit of £10,404 to which must be added £24,514 brought forward, giving a total of £34 918. After allowing for income-tax recovered, amounting to £3 411, and providing for income tax payable for the year, there will remain £31,673, which the directors have decided to carry forward, subject to corporation profits tax.

MISCELLANEOUS.

BURBERRYS.—The report for the period ended March 31, 1920, states that the profits (subject to excess profits duty and corporation tax) amount to £378.227. The proportion of profits attributable to the period from April 4, 1919, to January 12, 1920, the date of the contract for sale, amounts to £295 913 and has been allocated as under:—Amount due to vendors £25,000, amount carried to special reserve account (subject to excess profits duty and corporation tax) £270,913, leaving £82.314, from which has been deducted the fixed

dividend on the preference shares at the rate of 7½ per cent. per annum for the period to March 31, 1920, leaving available £70,935. The directors recommend a participating dividend (less tax) at the rate of 2½ per cent. per annum on the preference shares for the period to March 31, 1920, making 10 per cent. per annum for the period, a dividend (less tax) at the rate of 10 per cent. per annum on the ordinary shares for the period to March 31, 1920, leaving to be carried forward £47,656.

RONEO.—The report for the year ended June 30, 1920, states that the net profits amount to £101,020. The amount brought forward was £20,907, from which has to be deducted £19,442 for excess profits duty, leaving £1,465, thus making a total to credit of revenue account at June 30, 1920, of £102,486. The directors recommend a dividend of 15 per cent., making 25 per cent. for the year, on the ordinary shares, carrying forward £34,769. Expenditure on freehold land and buildings, plant, machinery, &c., at Romford has amounted during the year to £122,745. The trading for the year has derived no benefit from this expenditure, but on the contrary has suffered from the disorganisation which it has entailed. The working capital as represented by debtors and stock-in-trade also shows an increase of £170,677, making a total outlay on capital account of £293,022. This has been provided by the calls and premiums on 34,024 shares offered to the shareholders in January last, by the utilisation of profits, and by the temporary loans from the bankers. The time has now come for this expenditure to be provided for by a further issue of shares, and a resolution will be submitted creating 125,000 additional ordinary shares, which will in due course be offered to shareholders.

STEEL COMPANY OF SCOTLAND.—The report for the year ended July 15, 1920, states that the total amount of debenture stock now redeemed is £114,880. The net profit, after providing for all charges and setting aside £15,200 for depreciation of collieries, dwelling-houses and land, and also after making provision for excess profits duty and income-tax, amounts to £246,020. After adding £41 526 brought forward, there is available £287,546. It is considered necessary to provide £60,000 for the depreciation of steel works plant, and £35,000 has been placed to the reserve fund. The directors propose a dividend at the rate of 15 per cent. per annum, less tax, payable October 29th, leaving £140,046 to be carried forward.

MINES.

LENA GOLDFIELDS.—The report for the year ended September 30' 1919, states that no accounts have been received from Russia during the year. The directors were approached with a proposal to purchase 45,000 shares of Altai Mines. Of the 20,000,000 roubles forming part of the purchase money 18,450,000 were in hand from the sale of the 41,000 Lenskoie shares, These 41,000 shares figured in the balance-sheet at a cost of £872,616. This amount, plus £250,000 paid in sterling, gives the cost of 45,000 Altai shares namely, £1,122,616. The 41,000 Lenskoie shares disposed of for Rs.18,500,000 represented only 18.64 per cent. of the Lenskoie property, while the Altai shares, which replace them in the balance-sheet, represent 45 per cent. of the Altai property. A loss on exchange of £496.091 is arrived at by book entries made to adjust the sterling values shown in previous balance-sheets (calculated partly at Rs.9 52 and partly at Rs.38) to Rs.170 to the £1, the latest ascertained nominal rate obtainable. The directors have decided, under advice, not to write off this loss against the reserve account. The net result of the profit and loss account for the year is a credit of £55,000. This includes the balance brought forward, less differences in exchange. The balance is not carried forward, but written off the loss on exchange for the year.

THE CORN TRADE.

Mark Lane, Friday Evening.

Good progress has been made with seeding operations under favourable weather conditions, but in the late districts farmers were busy getting in the remainder of cereal crops, a number of fields being still uncut. Fairly liberal supplies of native wheat are on offer at the principal distributing centres, but quality proved variable, and prices range from 92s to 95s per quarter of 504 lbs, or 1s extra delivered up. Imported descriptions were advanced by 17s 6d to 25s per quarter, and No 1 red winter quoted at 121s, No. 2 ditto 119s, Manchurian 121s, ex ship per 492 lbs. Crops in Argentina and Australia, which are next to be harvested, promise well, having derived much benefit by recent rains. The demand for flour has proved quiet at the advanced prices, but there is rather more inquiry for offals at the old rates. English G.R. flour rules at 86s per qr ex mill. Imported descriptions were freed from control as regards prices, which mark an advance for the best grades, but common sorts reduced. Manitoba standard straights quoted 93s, Australian ditto 88s 9d, first spring and hard winter clears 86s 3d, and Chinese 81s 9d, per 280 lbs, ex store. Owing to the slow consumptive demand, pressure to sell Argentine descriptions, and liberal shipments from that country, values of maize tended in a downward direction. Plate ex ship quoted 65s, and ditto landed 68s per 480 lbs. On c.i.f. terms, Plate cargoes, October shipment, sold at 65s to 64s; Dan-Gal-Fox-Bessarabian, October loading, 66s 6d 480 lbs; ditto, October 5th bill of lading, 68s 6d; and early November at 67s, both per 492 lbs. Parcels of Plate quiet, irregular and easier. September-October sold down to 59s 6d; October-November, 58s 9d; November-December, 59s, per 480 lbs. Oats dull and values weak, especially imported descriptions. English new whites range from 62s to 66s; grey winter, 58s to 60s; and black ditto, 56s to 58s, per 336 lbs. Of imported Canadian quoted 61s, and Norwegian 64s to 65s. In the forward market prices marked a decline, especially for new crop Plate, which sold down to 43s, January-February, and parcels of Canadian No. 2, October-November, done at 50s 6d per 320 lbs. Barley ruled steady, but business on a limited scale. English malting ranges from 80s up to 115s, according to quality; grinding ditto, 78s to 82s per 448 lbs. Californian, 90s to 98s ex ship per 448 lbs. No. 4 Canada Western 70s; American feed (44 lbs), 68s; Plate, 70s; Australian, 97s to 100s; Morocco, 78s to 80s landed; and South Russian, 67s ex ship per 400 lbs. Forward positions met with quiet support. A sailer California, on sample, loading, sold, about 90s per 448 lbs; Dan-Bess-Kustendji, end October loading, 64s 6d; November 15th, 64s 6d per 400 lbs. Parcel trade dull. Australian Chevalier new, January-February, sold, 92s 6d per 448 lbs. No. 4 Canada Western, November-December, 62s 6d per 400 lbs. Beans quieter. English springs, 100s to 102s 6d. New winter, 82s to 85s per 532 lbs. China horse beans, £18 5s per ton. Peas slow of sale, and tendency easier. English maples, 95s to 105s; Dunns, 82s 6d to 85s per 504 lbs. Japanese old, 28s; new, 31s to 32s per cwt. Oatmeal quiet, unaltered. Only moderate charters were effected for grain during the week, but at steady rates. From the River Plate 95s was paid for a steamer up-river loading to U.K.-Continent, October 20th-November 20th, for maize, with 10s per ton, less option, down river. American quiet, and largely nominal to U.K., present requirements being mostly covered by liners, while rates ruled easier to Continent and Mediterranean ports. India easier, and 80s paid on dead weight basis to U.K. Australia firmer for new season's wheat, and some 30,000 tons Japanese vessels were reported booked at 150s per ton, January-March, to U.K., with options, while several sailers were fixed at 120s. Dalny wheat quotes 110s Mediterranean and 115s U.K.-Continent. Danube steady, and tonnage taken at 65s U.K., 67s 6d Hamburg.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—The strike quickly brought to a standstill a great portion of Sheffield industry, and it is calculated that by the end of the present week some 80,000 persons will be unemployed. Works having the space have larger stocks of fuel than usual, but the majority of them possess no facilities for storing. Several of these were unable to start this week. The blast furnaces in the vicinity have had to damp down owing to the failure of supplies of coke. Practically all the coke ovens are idle. The greater part of the establishment of Steel, Peech, and Tozer, the largest steel works in the district, are standing. The railway locomotive depots in and about Sheffield have very considerable reserves of steam coal. The employers as a body have given their men a formal week's notice to cease work in order to safeguard themselves, and intend to engage them from day to day. This will enable them to cease operations in the event of fuel running short without being liable to any legal obligations to their men. Suppliers of all kinds of materials used in iron and steel making have been flooded with instructions to suspend deliveries until further notice. In the house coal section the position generally gives no cause for immediate anxiety. The public appear to look on the strike as likely to be of short duration, and are not showing any panicky feeling.

Our Glasgow correspondent (writing on Thursday) says:—As a consequence of the coal strike trade here has been practically paralysed; by the end of the week it promises to be so actually, when it is calculated that well-nigh half a million or so of hands will be idle. The dislocation is more particularly seen in the steel and iron branches, some of which laid off on Monday, and since there has been a gradual closing down proceeding, as they cannot get along in any fashion without plentiful supplies of fuel. All the blast iron furnaces are either damped down or put out, the latter measure indicating that, come the end of the strike when it may, several furnaces will not be relit, probably because extensive repairs are designed. The melting and running of steel furnaces and mills will cease immediately, and no deliveries to speak of will be effected. Still, there are a good few shipyards, engineering shops, and foundries which will manage to pull along effectively for some weeks—four to five. In these connections, managements have succeeded in gathering together fair tonnage in plates and sections—no small portion in landings from the United States and Belgium. But, after all, it is felt that these arrangements will have little effect in relieving the industrial situation or in staving off the acute depression that must follow on a prolongation of the existing trouble. It can be understood that neither sellers nor buyers, producers nor consumers, have this week been entering into new contracts, though some enterprising consumers are prepared to lay down stocks conditionally on holders lowering quotations, but so far such proposals have not been entertained. Some lots of Scotch brands have been sold for export in the past few days at from 310s to 320s a ton, and more business could be put through if it were assured, which it is not, that the vessels would be "bunkered" and get away with reasonable despatch. Belgium is a seller of liberal quantities of steel and iron bars, of plates and steel sections, and that at fully 40s a ton under the terms named by Lanarkshire makers. A moderate trade is passing, but there is not much chance of developments, as purchasers cannot use up the material. All coals in depots, at railway sidings, and pit-heads in the West have been placed in the hands of an expert committee, who see to the distribution inland (domestic), to Ireland, and to the coast towns. The gas and electricity works are said to be well covered with supplies.

Our Middlesbro' correspondent's report, dated October 21st, is as follows:—Pig-iron: Owing to coal strike, the blast furnaces here are either damped down or on slack blast, and business in pig-iron is suspended. Prices continue nominally as last week, viz., 225s for No. 3 Cleveland G.M.B. and 260s for mixed numbers East Coast hematite, both for home consumption. Manufactured iron and steel: Steel works and rolling mills are entirely idle. Deliveries, however, will continue for a short period from stock, as shipyards and engineering works will continue so long as they can get steel. Steel ship plates, £24 10s, home; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25, net. Iron ore: Business has stopped and deliveries to works are entirely suspended. Nominally the price of best rubio is 52s. Sellers over the first half.

THE COTTON TRADE.

MANCHESTER, October 21.

Traders in all quarters of the market have been affected this week by the coal strike. Strange to say, the tone in some quarters has been slightly better. It is recognised that as factories close down owing to the shortage of fuel production of yarn and cloth will be very seriously decreased, and this development may result in the downward movement of prices being checked, with a possibility of higher values in due course. An increased inquiry has come through in piece goods for India, and a few more sales have been arranged, chiefly for Calcutta, in light bleaching descriptions. Only odd transactions have been put through for China. Buyers for the minor outlets have not been active, but now and again cheap stock lots are picked up. Home trade demand remains slow. American yarns for home use have been in slightly improved request, but the turnover has not been much better. Egyptian spinnings remain dull. Only sorting up lines have been reported in shipping counts.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says :—From one end of the wool textile industry to the other business is practically at a standstill. A few small orders are being put through to cover immediate requirements, but there is no market in the real meaning of the word, and quotations are merely nominal. Neither sellers nor buyers appear to have any idea of market values, and when holders of stock are forced to sell they have to take almost any price. The most extraordinary thing is that tops are being sold at prices so much below the cost of producing them from wool bought in London, and in face of the acute depression in the consuming centres, exceptionally good prices are being paid in Australia for superior merinos. It is a fact that wool cannot be bought to-day to make these cheap tops, and firms who quote low prices for forward delivery are simply indulging in a gamble. Yarn quotations are irregular, and there is very little new business, while in the piece trade there is almost complete stagnation. The decision of the authorities to postpone indefinitely the Colonial wool sales, which should have opened in London next Monday, is generally regarded as a wise move, especially as buyers can still obtain supplies privately from the Government if they so desire.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The suspension of the Liverpool sale came as a surprise to the trade, but when the full facts are considered the move was a wise one. At the sale of South American wool last Friday week the prices offered were so low that in all probability the same thing would have happened last Thursday, and trade being what it is and the outlook overshadowed by all that is involved in the miners' strike, the Government decided to abandon the sale fixed for that day. No one will be the least surprised if the next series of London sales, which are due to begin on Monday, fare similarly, for until the coal strike is settled there cannot be much by way of existing needs to be supplied, and so long as anyone wanting wool could apply to the selling brokers all possible wants could easily be supplied, either in London or Bradford. A good deal could be said for the abandonment of the next series of sales, and so give the trade a real good breathing space. Even apart from the coal strike, the textile industry is in a condition which the oldest living members of the trade have never known. The writer well remembers the depressing times of 1895 and thereabouts, when mills were very slack and trade exceedingy bad, but even then there were mills which were running full time and unemployment was not as bad as is the case to-day. Probably there is not a mill in the West Riding that is selling one-third of its output, and when present orders are executed there will be a big quantity of standing machinery unless there is a vast alteration. Practically the whole of the wool combers in Bradford are already affected. Short time is being run by every firm, there are many looms standing, spinners being distinctly on the slack side, although mostly running to execute old orders, while many mills are now standing Saturdays and Mondays. Manufacturers find it impossible to induce wholesale piece buyers to purchase anything, big stocks exist, and the fact that the highest priced contracts have yet to be delivered does not help to improve the position.

Surprise is being expressed in influential circles that no combined effort is being made to open trade with the Continent, for it is being recognised more than ever that not until foreign markets can be tapped and credits established is there any likelihood of a trade improvement. The question of credits is too complicated for the average trader to understand fully, and while it is more or less a question of exchange of commodities, many feel that the Board of Trade or some other Government Department might to advantage look at the question in conjunction with the trade departments of Continental Governments, and see what can be done with a view to stabilising exchanges and creating more favourable trading conditions. Travellers who have seen their pre-war customers candidly assert that they are all in great need of raw materials and partly and fully manufactured goods. They would gladly buy, but for the unfavourable rates of exchange. On the face of it, it seems ridiculous that buyers are wanting large quantities of the very commodities which are plentiful in this country, while the essential facilities for the transfer of the goods are lacking.

Australian sales appear to be going fairly well, and better than the majority expected. Of course, no weight of wool is yet being offered; but the fact that Melbourne prices this week are fully on a par with those of Sydney, shows that there are still buying orders in Australia, and prices are certainly above Bradford.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Various causes have contributed to a period of abnormal reaction in the market in the past few days. At the time of writing, however, there seems to be a much steadier tone, though until the coal crisis is overcome it cannot be said that the outlook is improving. Linseed, on spot, declined heavily owing to pressure on the part of holders, and while for shipment has been weak, the decline on the week is only about £1 per ton, with buyers in the market at the reduced figures. Linseed oil, which had been falling since the beginning of the month, entirely collapsed, and by Monday this week spot oil, ex mill at Hull, had fallen to £63 per ton, the lowest touched since the removal of control, eighteen months ago. The market on Tuesday recovered somewhat, and closed £1 dearer on spot, with £61 quoted for January-April delivery. Demand for some little time has been very moderate, home consumers' requirements being small, and Dutch linseed oil, with an equivalent ex mill value of about 72s, competing on the Continent strongly with English offerings.

Cottonseed is slightly cheaper on the week, but the oil product has, in the absence of demand, slumped to the extent of £7 to £10 per ton. Some trade for soap-making oil, for November-December delivery, is reported. Practically all vegetable oils are suffering loss of value, owing to the prevailing depression and the disinclination of consumers to enter into fresh commitments. Comparatively small as have been the receipts of oil-bearing materials in the past three months or so, there has been over-production of oils, and, as things at present stand, no inducement is offered to crushers to keep the mills going beyond an absolute minimum. Oil millers are now under a week's notice, after which they will be engaged by the day, in order to spread what employment may be found possible over the greatest number.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The disastrous effects of the coal strike were immediately felt in Bermondsey leather trade circles, and all reports tell the same tale—stagnation in every direction. The present state of affairs is all the more unfortunate in view of the fact that things were beginning to look up just a trifle since the Shoe and Leather Fair, as from recent conversations I gathered that quite an appreciable amount of leather of one sort or another had changed hands lately. Now, however, the outlook is as black as ever it was, and it is reported that some of the yards in the North have already further reduced their input of hides.

The above conditions have resulted in a very poor demand for sole leather, and what small parcels have changed hands this week have been cheap grade bends for immediate requirements in connection with the production of the £1 boot. Bellies and shoulders are very much neglected, and I understand that some of the tanneries have large quantities of these goods waiting for buyers to come along. A fair amount of inquiry is experienced from abroad for rough dressing leather, but I have yet to hear of any actual business having transpired, as the present rates of exchange are a barrier to anything in that direction. The home trade for this class of stuff is practically non-existent.

In regard to upper leathers a few inquiries have been received during the week for the cheaper grades of full chrome sides for use in connection with an anticipated order from abroad for boots, but it seems that the price at which the order will be placed will not permit of shoe manufacturers using the quality leather the buyers ask for. Other classes of upper leather are only in limited demand, and mainly for the cheaper qualities.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

Shoe manufacturers find their position increasingly difficult, and it is expected that in the event of the coal strike being prolonged the ranks of the unemployed shoe operatives will be further swollen by the closing down of the factories.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 22.

Quiet trading conditions ensued during the week, as manufacturers were not inclined to augment their stocks of raw material pending further developments connected with the coal strike. In some directions for manufactured articles, however, buyers interested themselves more freely, due to fears of the supply of same being interfered with through the cause previously mentioned. Meantime export requirements remain on a small scale, as financial considerations still weigh.

SUGAR.—As regards free parcels there was more inquiry, especially for white descriptions, and market ruled very steady. Transactions include American granulated at 110s to 111s; white Mauritius, 110s to 109s; crystallised West India, 99s to 102s; muscovado, 75s to 85s per cwt. American syrup steady, and useful dark sold to a fair extent at 35s per cwt, duty paid. Liquid glucose, 52s. Honey quietly steady.

COFFEE.—Market keeps very quiet on balance, with only retail quantities changing hands from time to time on export account, while home-trade buyers merely pick out a few attractive parcels. Prices on the week show little or no alteration. The chief feature in auction this week proved a steady demand for Nairobi. Good bold sold, 102s 6d, and peas 113s 6d. Future delivery market dull, but rates steady.

COCOA.—Market very idle, and general position purely nominal.

TEA.—During the week 43 600 packages Indian and 34.500 packages Ceylon were offered, and while fine qualities met with fair attention at steady prices, common and also medium met a poor market at irregular and easy quotations.

RICE.—Market steady, but trade was reduced to a minimum this week. Bran flat, and Rangoon, to arrive, sellers, £82 per ton. Beans and peas quiet.

SPICE.—Pepper dull, and small sales, on spot, including fair black Singapore at 5¾d; ditto, October-December, 6⅛d; Lampong, spot, sold, 6¼d; Aleppy, 7d; Tellicherry, 7½d: white Singapore, 1s 2⅜d; Muntok ditto, 1s 3½d; ditto, October-December, 1s. Zanzibar cloves, spot, sold, 1s 7½d to 1s 7d. Pimento, sellers, 4d. Tapioca dull. Fair flake, spot, 2⅛d per lb; ditto, October-December, steamer, London, sold, 21s; fair Penang seed, spot, sold, 25s; ditto, October-December, sellers, 25s; small sago, October-December, 31s; sago flour, November-January, sold, 20s, 19s 6d; farina, spot, 29s; ditto, November-January, sold, 26s 6d to 26s 3d Desiccated coconut fine cut, spot, 83s; medium, 88s; coarse, 79s; half-and-half, October-December, sold, 76s. Ginger market quiet, but steady. Eastern nutmegs also West India met a fair inquiry.

JUTE.—An idle market resulted this week, business being restricted to a few lots on near continental account, and with the native holidays in force in India, a more or less nominal state of affairs prevailed. Native first marks assortment, actuals, new crop, October-November, Hamburg, sold, £49 to £50; subs, usual ports, quoted £46; Daisee, No 2, £46 for actuals, and lightning actuals, October-November, £37, with subs £35. Calcutta hessians and also twills inactive this week and nominal.

HEMP.—Manila a shade easier, and trade slow. J grade, October-December, sold, at £65 10s; K ditto quoted £56. New Zealand quiet. Points, October-December, quoted £55 10s, and fair, £53 10s. Italian idle.

SHELLAC.—Market rather irregular forward. Standard T.N., spot, 620s; December, 540s to 550s.

COPRA.—Market unsettled. F.M.S. Straits, November-January, London, moved up to £55 5s, and then relapsed to £54, since at £55. Ceylon, October-December, London, sold, at £54 10s to £56. Sales to the Continent were at proportionate figures. Palm kernels unsettled. October-December sold up to £36, then £35, since at £36 10s and £36.

MENTHOL.—Spot sold, 28s 6d; peppermint oil, 6s 4½d; aniseed, 4s; slab camphor, 6s; China crude, spot, at 3s 4½d, Japan wax, spot, sold, 112s 6d; and November-January, 109s.

EGG PRODUCTS very quiet, with rates nominally the same as before.

RUBBER.—Market remained generally quiet. Crepe, spot, sold, 1s 5⅜d, 1s 5⅓d; November-December, at 1s 6¼d, 1s 6d; January-March, 1s 7¼d to 1s 7⅜d; January-June, 1s 7⅜d to 1s 8¼d; sheet, spot, sold, 1s 3⅜d to 1s 3¼d; November-December, 1s 4¼d to 1s 4d; January-March, 1s 5¼d. Fine hard Para, spot, 1s 6d.

OILS. — Linseed firmer. Spot, net, naked, 72s; November Decemher, 67s 6d. Rape quiet. Crude, spot, 73s; refined 84s. Cotton quiet. Crude Egyptian, 62s; Bombay, 52s; refined edible, 85s. China wood quiet. Hankow, spot (barrels), 108s; and Hong Kong, spot, 106s. Palm kernel quiet. Crushed, spot, 80s; extracted, 79s. Coconut quieter. Ceylon, spot, sold, 91s; September-November, 89s; Cochin, ditto, 90s 6d. Soya quiet. Oriental, afloat, 66s; October-December, 64s paid; deodorised, 90s. Japan fish quiet. September-November (cases), 40s. Cod liver dull. English, spot, 44s. Groundnut quiet. English crushed, naked, spot, 82s; deodorised (barrels), 100s. Turpentine irregular. American, spot, 120s 6d; November-December, 121s; January-April, 123s. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum easier. American, spot, 2s 3¼d; and water white, 2s 4¼d per gallon.

OILSEEDS.—Linseed: market quiet. closing firm, Calcutta, afloat, £35 10s. September-October, £35; Bombay, September-October, £36.

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

Fine Crossbred....	3	0	4	0

Plate, afloat, Hull, £32; September-October, sold, £32 to £31 15s; January-February, new crop, £31 to £30 and £31. Rapeseed easier. Toria, September-October, Antwerp, £33; real bold Ferozepore, £32; brown Cawnpore, £29. Cottonseed firm, London. Egyptian, f.a.q., September-October, £18 10s to £19. Bombay, spot, Hull, £13; September-October, at £13. Gingelly quiet. Chinese, afloat, to Continent, sellers, £44 10s. Groundnuts quiet. Coromandel, October-November, £37.

METALS.—Tin: Selling pressure last Monday led to a declining market, cash relapsing to £238, and three months to £245; but the downward tendency was arrested, until the middle of the week, on good buying, while these positions improved to £250 and £256 respectively. At Thursday's session, the course of values was in a further upward direction on renewed support, cash being done at £250 to £250 10s, and three months' from £259 to £256, finally £257. Friday's movements were in a downward direction on fairly free selling, cash being registered at £248 5s to £248 10s, early November, £251 to £249; three months', £254 to £255, relapsing to £253 15s, and since rallying to £255. English ingots, £246 to £247. Copper: The standard market exhibited irregularity until Tuesday, a fairly large business being done, cash moving at £93 to £92 10s, and three months at £88 5s to £88 10s. By the middle of the week, three months changed hands at £88 10s to 88 15s. A quieter feeling prevailed at Thursday's session, cash being registered at £91 and three months £89 to £89 10s. At Friday's session there was less doing at an easier range. Standard, cash, sold at £90, and three months' at £88 15s to £89. Electros, £100 to £104; best selected £100 to £102; strong sheets, £157. Antimony: English, ordinary to best. £52 to £55. Aluminium: Home trade, £165; export, £185. Lead firmer, at £36 to £35 15s. Spelter dearer, at £39 to £40. Quicksilver reduced to £15 5s to £15 10s. Wire bars quoted at £103 to £104.

TALLOW.—Messrs Colchesters and Woolner write as follows on October 20th:—The tallow market was quiet during the week, and prices were mostly 3s lower to-day. The home demand is of small importance, but there is a fair demand for export. The shipments from Australasia in September amounted to 4,600 tons. At auction to-day 1,574 casks tallow were offered, and 470 were sold. Quotations are:—Australian mutton: Fine, 76s; good to fair, 69s to 66s; dull to dark, 62s to 58s; hard, 69s. Australian beef: Fine, 84s; good to fair, 70s to 66s; dull to dark, 60s 6d to 57s; sweet, 87s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 75s; and mixed, 43½, c.i.f., London, 72s. The market letter is lower, tallow 3s, stuff 3s. Town tallow, 60s per cwt. Rough fat per 8 lbs, 6½d to 1s 2½d; melted stuff, 46s per cwt. Quotations are:—Town: 58s net cash, naked, ex works. Country: Frail casks, 54s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 60s to 56s. Bone fat: White, none; pale, 57s; benzine, 51s; melted stuff, 52s, f.o.b.

THE MONEY MARKET.

MONEY was very plentiful in the early days of the week, but became rather more scarce as the end of the month approached. Stagnation ruled in the discount market, and the three months' rate hardened a little yesterday.

The Bank return showed increases of £51,000 in the stock of gold and £535,000 in the note circulation, and a consequent decrease of £484,000 in the Reserve. Other securities ran off to the extent of £7,818,000, but Government secuities rose by £2,898,000, so that there was a net decrease of nearly 5 millions in the securities. Deposits were thus 5½ millions lower, most of the decline being in Other. The circulation of currency notes declined by £32,000 to £355,872,000, which includes £3,075,900 for notes called in but not yet cancelled. The fiduciary issue is £305,540,000, or £15,060,000 below the maximum.

* * * *

The announcement that Sir H. Babington Smith is recommended for election on Wednesday next as a member of the Bank of England Court of Directors is interesting, and a further evidence of the Bank's policy of widening the sweep of its net in its selection of directors. Sir Henry will bring widely varied accomplishments and experiences to the service of the Court. In his University days a distinguished scholar, he has been a Treasury clerk, private secretary to (the then) Mr Goschen when Chancellor of the Exchequer, secretary to the British delegates at the Brussels Monetary Conference in 1892, British representative on the Council of Administration of the Ottoman Public Debt, member of a financial Mission to the United States in 1915, and has held other important posts in different parts of the world.

* * * *

The following table shows Public Income and Expenditure for the week ended October 23, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	27·649	Supply Services	15·335
,, Exchequer Bank Balances	·298	Interest on Debt.....	4·149
		Reduction of Debt.....	7·918
		Sundries	·545
	27·947		27·947

These operations reduced debt by a sum of £7,917,895, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 3·289	Bank of England Advances	— 3·250
Treasury Bonds	+ ·155	Public Departs. Advances	— 2·100
		American Loan	— 3·000
		Surrenders of Bonds, &c.....	— 1·564
		Depreciation Fund.....	— ·500
		National Savings Certificates	— ·325
		Other Debt	— ·126
		Sundries.....	— ·497
	+ 3·444		— 11·362

Sales of National Savings Certificates amounted to £700,000, but £600,000 went out in payment of Certificates maturing, and under Section 59 (4) of the Finance Act, 1920, £425,000, being proceeds of National Savings Certificates, was allocated for housing. The floating debt was reduced by £2,150,000. The American Loan absorbed a further £3,000,000, making a total to date of 58 millions ; this nearly completes the operation of repayment, which has been most successfully carried through.

* * * *

Although the main factors this week in the exchange market have again been the varying phases of the coal strike, there have been several other points of interest. The decision of the Government not to avail itself of its eventual rights under the Peace Treaty against post-war German property within British jurisdiction is an act of common sense which may prove of considerable importance to the London money market. Its first effects may almost certainly be traced in the sharp upward movement at the beginning of the week in the Amsterdam rate, which, although again somewhat below the highest point reached, stood on Friday morning at 11.39, as compared with 11.21 seven days ago. It is not clear whether the sharp rise in the mark is to be put down to this cause, or, as is more probable, to the gradual realisation of the difficulties of Germany's position, which was made still more clear by the speech of the Minister of Finance at the beginning of the week. On Friday the mark stood at 270, as compared with 243 a week ago. New York, on the whole, has shown more optimism with regard to a coal settlement than this country, and by the 27th the rate had very nearly reached 3.50 again. On the 28th, however, came a sharp reaction, so that on Friday the quotation was only 3.46¾, as compared with 3.44¾ seven days ago. When rates were at their lowest there was undoubtedly an increase in the purchases by New York of British Government short-term securities, but the amount of this buying has probably been somewhat exaggerated. The rise in the Madrid rate continued steadily until the 27th, when at 25.15 it stood at only 7 points below par. By Friday there had been a slight reaction, but at 24.97½ it was still well above last week's quotation. Switzerland has also moved in our favour, being at 22.0, some 19 centimes above last week's quotation. All the Scandinavian exchanges also show a very considerable movement in our favour, Stockholm, after being not far short of 18, standing on Friday at 17.89, as compared with 17.65 a week ago. There was a sharp jump in the Paris rate at the beginning of the week, the quotation at one time being up to 55. During the last two days, however, there has been a reaction, the rate on Friday morning at 54.00 being only about 70 centimes above that of seven days ago. Brussels, in the same way, after rising sharply has fallen away a little, but was still at 51.0 some 60 centimes over last week. The spread between the two currencies has again widened by about 10 centimes. There has been very little variation in the quotation for futures as compared with a week ago, New York being about 1½-2 cents for one month, 3-4 cents for two months, and 4½-5½ cents for three months above spot. Paris, at 27 to 32 centimes per month below spot, is unchanged, and Brussels, at 35 to 40 centimes, a little wider. After some slight improvement on bear covering, the silver market has again relapsed, and shows little promise of betterment. The rupee, after falling away, has improved again somewhat, but was yesterday still slightly weaker than seven days before. Hong Kong and Shanghai both also went in our favour, but have risen again by Friday to the same rate as a week ago.

EVENTS OF THE WEEK.

October 23rd.—Conference of miners' and N.U.R. executives. Threatened railway strike postponed.

October 24th.—Ministers and officials of Miners' Federation confer at Downing street.

October 25th.—Miners consider new proposals for strike settlement. Text of Emergency Powers Bill

published. Second reading carried. Death of Lord Mayor of Cork in Brixton Prison after 74 days' hunger strike. Death of King Alexander of Greece.

October 26th.—"Negotiations" between Ministers and miners' representatives reopened. Debate on Emergency Powers Bill.

October 27th.—Hitch in coal strike negotiations. Dublin office of Munster and Leinster Bank raided by military. Emergency Powers Bill read a third time. Agreement signed between French oil group and Anglo-Persian Oil Company.

October 28th.—Agreement reached in coal negotiations, which miners' leaders recommend miners to adopt in another ballot. Mr Chamberlain announces issue of new series of Treasury bonds. Emergency Powers Bill passed by House of Lords.

INTERNATIONAL DILEMMAS.

It is stated that opinion in France has been deeply stirred by an announcement in last week's *Board of Trade Journal* that the British Government has consented to vary the terms of the Treaty of Versailles. The point on which it did so was small, but important. Under paragraph 18 of Annex II. to Part VIII. of the Treaty, in case of voluntary default by Germany, the Allied Powers were entitled to take measures, including economic prohibitions and reprisals, and in general such measures as the respective Governments might determine. This, as an official explanation published in the *Times* of October 28th pointed out, "might conceivably include almost anything," and the practical effect of it naturally was that no German, in his senses, would leave any assets here or in any of the Allied countries, lest they should run the risk of seizure if his Government chose to make voluntary default in payments due to the country where he had a balance to his credit at a bank or any other kind of property. The question whether default is or is not voluntary involves metaphysical problems that may be argued until the crack of doom. There are, if our hazy memory on these points serves us right, learned philosophers, called Determinists, who maintain that everything that we do is the inevitable result of all that has gone before, and that Free Will is a delusion of the human imagination. On the other hand, it is possible to people, like Tristram Shandy's father, who delight in subtle paradoxes to argue that whatever we do we do because, under the circumstances, we prefer our present course of action to any other, and that the condemned criminal who walks to the gallows does so voluntarily. When Charles the Second robbed the London goldsmiths of money that he had borrowed from them, he, no doubt, felt quite sure that he could not help it, while they were equally convinced that his action was voluntary. Any German business man would thus be extremely reluctant to put any assets into a position where their detention might be maintained until the solution of problems of this engaging kind concerning the action of his Government. Even if there could be no doubt concerning the question of voluntary or involuntary default, the existence of the clause must have a strongly deterrent effect on trade between the groups that have lately been at war; and since it is "plain as way to parish church" that unless these State groups trade freely together neither of them can grow fully prosperous, and the victors' chance of being paid an indemnity must be impaired, it seems to have been a sensible act to show that certain of the possibilities involved by the clause need not be feared. Accordingly an announcement was inserted in the *Board of Trade Journal* of October 21st, to the effect that H.M. Government has informed the German Government that it does not intend to exercise its rights, under the clause in question, to seize the property of German nationals in this country in the case of voluntary default by Germany; and that this renunciation (which obviously only covers post-war property) applies to bank balances, goods in British bottoms, or goods sent to this country for sale. Perhaps the Government might have made the announcement through a channel more directly in touch with the general public. It is true that the people immediately concerned were traders, but a variation of the Treaty is a matter which is of public importance, and this method of announcement naturally stirred the bile of those warriors who found the four years' war too short for their fiery tastes, and want to put and keep a barrage, mostly composed of ink, between it and the return of real peace. These desperadoes, however, are comparatively few in number here, and their number dwindles daily. As to opinion in France, it is probable that there, also, in spite of the eagerness of some politicians and some organs of the Press to maintain a state of war, recognition is spreading of the facts of the case with regard to trade revival and the indemnity payment. France has suffered so cruelly in the war, that we have no right to criticise her attitude towards her late enemy, and her desire at all costs to secure herself against the aggression of a restored Germany. But the best opinion in that most sensible and logical country already, we believe and hope, sees that it is not possible to keep Germany permanently crushed, and that the best way to real security lies through real peace. It is also announced that the Federation of British Industries' attempt to secure the revision of the export credits scheme has been successful, to the extent that credit will now be granted up to the full cost price of the goods sold as against 80 per cent. under the revised scheme*; the Government, however, will retain recourse against the exporter for the last 20 per cent. It remains to be seen whether this modification will have much practical effect in galvanising the scheme into life. Mr Kellaway told an audience in his constituency on Wednesday that the announcement made on Monday of this extra 20 per cent. of credit had next day produced applications for over £1,000,000, and dilated on the markets that are waiting for our goods if only sellers can be financed during the period needed by the buyers. It is most true that this need for credit is urgent, and the Government's scheme may do more good than harm in meeting it, faulty as it is. The cost of production basis, that once looked so cautious and secure, has a different aspect now that prices have fallen, and the success of the scheme may oblige the Government to finance exports out of Ways and Means advances. So we are back at the old dilemma between restriction of trade and increase of inflation. And the poor capitalist—the man who goes without things and hands over his buying power to somebody else instead of clamouring for somebody to create money for him—is the only one who could really save the situation by saving money. But he is so frightened by clever theorists who tell him that a levy on capital will do him good, and Labour leaders who want to reform him out of existence, and guildsmen who curtly dismiss him as a thief, that he does not see much use in saving nowadays. It is really extremely shortsighted to terrify this useful person out of existence before an alternative has been provided, but this is what a number of clever people are doing.

Even the settlement of pre-war debts produces difficulty and grievance that seem to be quite unnecessary. British accepting houses and other creditors of German nationals are much exercised, and with a good deal of justice, by the loss of interest involved by official delay in the settlement of German debts. Interest due to these creditors ceases on the date of admission of debt by the German clearing office, but they are still liable for interest at the rate of 9 per cent. on credits given to them under

the "cold storage" arrangement, and of 7 per cent. in the case of creditors whose debts were not represented by bills, until they get their money and can pay off these credits. Owing to the system of making monthly payments to these creditors a very long delay, averaging nearly two months, is involved between admission of debt by the German clearing office and payment by the British. And in the meantime the British Government gets interest not only from the unfortunate British creditors, but also from German funds held by it here and profitably employed in the money market. Seeing that it also charges no less than 2½ per cent. for collecting these debts, the creditors reasonably contend that it might either employ a sufficient staff to do the business promptly, or forgo interest from them after the date of admission of the debt.

A PROVISIONAL COAL SETTLEMENT.

After two weeks of suspended work in the coal mines of the country, there are distinct hopes that a settlement has been reached. We have passed through anxious days. Ever since Saturday last the Government and the principal leaders of the Miners' Federation have been in almost continuous session, exploring every avenue, and endeavouring to secure both an end to the present strike and the establishment of a wages system which will automatically in the future adjust wages in accordance with the true condition of the industry. The negotiations, which have been conducted in almost complete secrecy, have more than once come near to a collapse. But, thanks to the sound sense of the more moderate elements among the miners' leaders, and to the patient insistence of Mr Lloyd George, Mr Bonar Law, Sir Robert Horne, and Mr Bridgeman to leave nothing undone which could contribute towards peace, a provisional agreement has at last been reached between the Government on the one side and the miners' executive on the other.

The country is not yet out of the wood. The executive of the Miners' Federation, though it has large discretionary powers in negotiation, has no mandate to declare the strike at an end. Two ballots have already been held, and the members of the executive regard themselves as bound by those ballots until their mining constituents, in a third ballot, ratify the agreement which has been reached. This agreement will, therefore, be submitted to the men, but, unlike the datum-line proposal, it will be recommended to the miners for their acceptance by the executive. This decision of the executive to identify itself officially with the agreement must carry great weight with the men who will vote upon it. It is not an easy agreement to understand, and will need a great deal of personal explanation before the men can fully grasp all that it implies. There will, no doubt, be attempts made locally, especially in the storm centre of South Wales, to get the agreement rejected. But the miners as a body have shown conspicuous loyalty to their responsible executive, and we may really hope that the third ballot will bring the strike to an end.

The agreement provides both for the immediate settlement of the strike and for the future regulation of wages. We will take the immediate settlement first. The miners get their 2s per shift increase from the date of resuming work until January 3rd next. Then a system of revision comes into force by which the wages move up or down in accordance with the proceeds from export coal, which are, of course, the main source of profits in the coal industry. The starting-line for calculation is to be the weekly average receipts from export coal during the last September quarter, which was not a very good one. The miners do not get an assured increase in wages beyond January 3rd next unless they contribute towards earning it, but they have succeeded in obtaining for themselves—and incidentally for the coal-owners—that direct "inducement" to increase output which Mr Brace quite fairly laid down as essential if increased production were to be obtained by the efforts of all branches of the coal industry—the coal-owners, the managers, and the miners.

This part of the agreement is temporary, but will continue until a permanent system has been established for regulating wages. The Miners' Federation and the Association of Coal-owners "solemnly" pledge themselves to the common purpose of working cordially together to improve the output of coal and to set up machinery for regulating wages so as to get rid of the present anomalies, and to provide against the recurrence of difficulties. They undertake, both of them, to establish district committees and a National Committee, and to submit to the Government a scheme for the regulation of wages not later than March 31st next. Pending the preparation of this scheme, the temporary basis, to which we have already referred, will remain effective.

It will be seen that a long step forward has been achieved. If this agreement is accepted by the miners and loyally worked—we do not doubt the loyalty of working once acceptance has been obtained—we shall have co-operation between miners, coal-owners, and the Mines Department in place of the continual friction of the past two years. The fruits of this co-operation must be more coal and ultimately cheaper coal. The cost of the strike and of the increase in wages will be a small price to pay for this co-operation if it really be achieved. The agreement is complicated in detail, though simple in principle. It confers great benefits upon the miners, and still greater benefits upon the whole community. It may, we sincerely hope that it will, mark a turning-point in the relations between Capital and Labour, and be the first of many agreements in other industries between employers and employed to make common cause in the increased production of essential commodities. Out of the evil of a strike much permanent good may come. The Government and the miners' executive have done their part; it remains for the men in the coalfields of the country to do theirs. We hope that they will vote quickly for acceptance, so that the mines may become active again by the beginning of the week after next. The country, at the best, will have lost the fruits in coal of three weeks' work.

THE FINANCIAL MACHINERY OF HOME RULE.

(FROM A CORRESPONDENT.)

Whether or not Ireland should control her own Customs and income-tax, and what in general should be the degree of separation between the Treasuries of Ireland and of Great Britain, are political questions into which it is not proposed to enter here. But whether the machinery of financial administration which the Government of Ireland Bill proposes to set up is the best for purposes of the Bill, whether, indeed, it is any good at all for any purpose, are questions not, perhaps, incapable of being answered without any political bias.

The management of the financial relations of Great Britain and Ireland, according to the Bill, is to be in the hands of a Joint Exchequer Board, with two British members, one North Irish and one South Irish member, and an official chairman. Into the dubious constitutional position of such a Board it is not intended to enter, but to consider only, from a practical point of view, the nature of the tasks that the Board will be called upon to perform, and its ability to perform them.

The Board will have to fix the contribution to be made by Ireland to the Imperial Exchequer, and to fix the proportion of it to be contributed by North and South Ireland respectively. Its deliberations will thus be of a nature to provoke the most acrimonious controversy. Let anyone imagine the scene, with able and pertinacious representatives of Orange and Green Ireland, and of Whitehall, sitting round a table and deciding how the burden of Imperial expenditure is to be distributed between them! Anyone with experience of administrative wrangles of the sort knows well that under such conditions the best hope of enabling a Board to arrive at some sort of a decision, without mere deadlock—and it is not in any case a very good hope—is to narrow the field of possible controversy down as much as possible by giving to the Board a code of rules to guide it in its decisions. The rules should be fixed, simple, and so drafted as to decide beforehand and to remove from the arena of discussion all questions, at least, of general principle involved in those decisions. Is the Joint Exchequer Board to be provided with any code of the sort? It is not; and, lacking it, its members will be at large to range over whole provinces of embittered controversy. Consider the nature of the economic problems that the Board will have to solve in arriving at the amount and the

incidence of the Irish contribution. In the first place, it will have to decide year by year what is the amount of the liabilities for that year that is to be regarded as Imperial. The picture at once suggests itself of the Irish representatives on the Board girding themselves for the fray, when it comes to be decided, for instance, whether expenditure for some scientific inquiry at the Home Office is Imperial or British. The third schedule to the Bill attempts to specify the Imperial headings, but it does not profess even to make an exhaustive catalogue, and it leaves room for controversies acute enough of themselves to bring the Board to a deadlock.

In the second place, the Board will have to decide the proportionate contributions of Great Britain and of Ireland to the Imperial liabilities by reference to their "taxable capacities." The Bill throws this phrase out as if "taxable capacity" were a term of art, well understood as to its meaning, and easily ascertained as to its amount. In fact, of course, the phrase has about as much useful meaning in this connection as the blessed word Mesopotamia would have. What is taxable capacity? In estimating it, is allowance to be made for the minimum expenditure for subsistence, or for the cost of government, and for the different standard in these particulars in Great Britain, Ulster, and South Ireland respectively? Here is room enough for controversy. The phrase, in truth, has no fixed meaning, and it will be open to members of the Board to dispute about it *ad libitum*, nor is there any authority that can say which of them is in the right. Even if they succeed in agreeing on a meaning for the phrase, there is a still more difficult problem for them to solve in this connection. How is a numerical value to be given to the relative taxable capacities? It is impossible to evaluate taxable capacity by direct calculation; no adequate statistical information is available. It would need a perfect census of production, and we have not got any such census at all.

All the controversies involved in "taxable capacity" will have to be fought by the Board twice over; once as between Ireland and Great Britain, and once as between North Ireland and South. If the Board does succeed in avoiding deadlock on the question, it is humanly probable that it will do so only by bargains of an indirect sort. North or South will give Whitehall its support in an Ireland *versus* Great Britain dispute, in return for its support in a North *versus* South dispute. Such bargains do not conduce to mutual confidence and good feeling; but perhaps deadlock is the more probable result.

In the third place, in order to arrive at the amount to be paid to Ireland out of the reserved revenues, the Board will have to calculate the amount of those revenues "truly attributable" to North and South Ireland respectively. In order to do so, it must embark on a sea of almost metaphysical speculation, where it will encounter storms of inveterate and embittered controversy. The Treasury publishes annually a White Paper ("The Financial Relations Return"), which professes to calculate the proportion of revenue attributable to Ireland; but neither the theory on which the calculation is made nor the application of that theory is accepted by Irish publicists. One example of the controversies involved must suffice. Ireland's share of the yield of super-tax and the greater part of that of income-tax cannot, it is admitted, be ascertained directly. They are estimated "statistically," on the theory that they are proportionate to the free personalty on which estate duty is paid in Ireland. The theory may be the best possible, as a working assumption; but it is by no means so obviously or certainly true as to deprive the warring members of a Board of infinite opportunities for dissension.

Enough has been said to suggest that the task of the Joint Exchequer Board as it is set by the Bill will be an almost hopeless one. Complete deadlock is the most probable result, if the Board is left to roam at large over these fields of dispute. Some of the difficulties that it will have to face are inherent in the scheme of reservation of Irish revenues, and would only be avoided by a complete separation of the British and Irish Treasuries. Others can be avoided by drawing up a statutory code of fixed rules for the guidance of the Board. If the Bill is to work, it seems very desirable that that should be done before it passes into law.

TRADE OF BRITISH GUIANA AND BRITISH HONDURAS.

These colonies, whose soil and climate are adapted for the growth in great abundance of every kind of tropical produce, are awaiting the application of capital and expert direction to become of immensely increased value. British Guiana, after having been occupied by the Dutch for about 200 years, was ceded to the British Crown in 1814. It is the only territory on the mainland of South America possessed by Great Britain, and extends from the mouth of the Orinoco about 300 miles eastwards to Dutch Guiana, and stretches inland for more than 500 miles. It has an area (109,000 square miles) about equal to that of the British Isles, with a population of over 300,000, of whom only 20,000 are whites (mostly Portuguese immigrants), and over 100,000 coolies. Less than 100,000 acres are under cultivation, settlement being confined to the narrow but very productive coast line. The gold-fields scattered about the interior promise to be among the richest in the world. Coffee of excellent quality was for some time grown in the neighbourhood of the Berbice River, but its cultivation and that of cotton have almost given place to the growth of the sugar cane. The forests, which cover the interior, abound in woods of great value, suitable for house and ship building, and for the manufacture of household furniture. Rice is largely grown by the coolies. The climate is, of course, hot, but is not unhealthy.

British Honduras, or Belize, is the only British territory in Central America. Its area is 7,562 square miles (about the size of Wales), and its population under 50,000, of whom fewer than 1,000 are white. It is estimated that less than 100 square miles are cultivated. Throughout the interior are forests full of valuable timber, and in the northern area are grassy meadow lands suitable for pasturage. Mahogany, cedar, and logwood are the chief products, but bananas and cocoanuts are already exported, and both palms and the vanilla orchid grow luxuriantly, and are only awaiting development as a very profitable industry. The value of our imports from British Guiana rose from £648,300 in 1913 to £2,191,200 in 1919, whilst our imports from British Honduras rose from £155,000 to £214,000 in the same period.

That trade does not always follow the flag of the British Empire is strikingly shown in the case of Canada's trade with the United States, exceeding that done with the United Kingdom. Contiguity is of very great importance. It is exemplified also in the unimportant instance of British Honduras, whose imports rose in value from £252,500 in 1901 to £718,800 in 1912. In that year the value of the imports from the United Kingdom was £137,100; from the United States, £272,900; and from its great neighbour, Mexico, £226,100. Of its exports in 1913, valued at £642,600, some £488,000 went to the United States and £78,000 to the United Kingdom, Mexico taking products valued at £46,000. The value of the foreign trade of British Guiana is much greater, and is shown in the following table (see pages 278, 279 of [Cd. 9,051] 1918):—

British Guiana. Values in £0.0's.	Imports.		Average Annual Value.		Increase in Latter Period.	
	1904.	1913.	1904 to 1908.	1909 to 1913.	Actual.	Per-cent.

All foreign countries.....	457	171	402	304	— 98	24·4
United States	410	80	347	224	—123	35·4
Total exports	1,754	2,110	1,806	1,976	170	9·4

Owing to lessened imports from the United Kingdom during the years 1910-12 the actual increase in the average annual value from 1909 to 1913 rose by only £4,000 over that of the previous five years. But the value of imports from the United Kingdom in 1904-1913,

and for the average of the five years 1909 to 1913 is seen to have been more than half the value of the total imports by British Guiana. The percentage increase in the value of imports received from the British East Indies (47.5) is very high. The United States supplied the bulk of the imports from foreign countries. The value of the exports to the United Kingdom in 1913 (£1,015,000) much exceeded that of the average of the five years 1909-13. The value of the exports to the United States fell by more than one-third, whilst the exports to the neighbouring British West India islands rose very rapidly, the percentage increase being 156.

The great increase in the value of our imports is shown in the next table :—

Values in £'000's.	1913.	1914.	1915.	1916.	1917.	1918.	1919.
Sugar, unrefined	251	764	896	245	975	1,515	..
Rum	171	213	427	706	551	361	..
Gutta Percha	132	106	91	104	284	473	..
Wood and timber	55	24	24	18	5	20	..
Cattle food containing molasses	22	7	13	6	25	46	..
Total imports	648	1,138	1,469	1,110	1,857	2,454	2,191
Total exports of British produce	730	710	711	716	764	691	714
Total re-exports	108	92	91	74	52	19	22
Total trade	1,486	1,940	2,271	1,900	2,673	3,164	2,927

The exports of British produce and manufactures consisted mainly of cotton manufactured goods, manures, soap, apparel, hats, boots and shoes, machinery, and manufactures of iron and steel. Exports of cordage and twine and of medicines and drugs are increasing. The colony might well be developed by a wise system of immigration of East Indians, and its great resources would quickly raise it from its present low position in the rank of British oversea possessions. The same policy could be applied to a development of British Honduras, whose trade with the United Kingdom is shown in the following table :—

Values in £'000's.	1913.	1914.	1915.	1916.	1917.	1918.	1919.
Imports by U.K.	155	185	108	83	102	1	214
Exports of U.K. Produce, &c.	122	97	57	68	54	60	98
Re-exports	21	12	13	11	5	3	5
Total trade	298	294	178	162	161	64	317

Our imports from British Honduras consist almost entirely of mahogany and logwood, but with our rapidly growing mercantile marine we may hope that other tropical produce may very soon figure largely in our receipts from the colony.

Notwithstanding the great increase in values since 1913, the value of our exports of United Kingdom produce and manufactures to the British West India Islands and to British Guiana and British Honduras only amounted to £3,092,000 in 1919, and of our re-exports to £213,000. The rapid increase of our imports is shown in the following table :—

VALUES of our IMPORTS from the BRITISH WEST INDIA ISLANDS, BRITISH GUIANA, and BRITISH HONDURAS (see [Cmd. 366]).

Values in £'000's.	1913.	1914.	1915.	1916.	1917.	1918.	*1919.

Total imports	2,940	3,714	5,707	6,257	9,209	10,538	13,614
U.K. exports	3,420	3,326	2,774	3,085	3,018	2,538	3,092
Re-exports	547	511	525	438	207	81	213
Total trade with U.K.	6,907	7,551	9,006	9,780	12,434	13,157	16,919

The values for 1919 are taken from the December number of the Trade and Navigation Returns for last year.

The most noticeable feature of the table is seen in the great increase in the value of our imports from £2,940,000 in 1913 to £13,614,000 in 1919, an increase of £10,674,000, or 363 per cent. The value of the import of molasses rose from £12,000 in 1913 to £616,000 in 1918; of honey from £12,000 in 1913 to £483,000 in 1918; of spices from £28,000 to £420,000. The value of fuel oil rose in 1918 to nearly a million pounds. On the other hand, the fall in the value of our exports of produce and manufactures is due mainly to the war. Our re-exports showed a sharp rally last year. It is reasonable to expect that a considerable increase in the value of our exports and re-exports will be shown at the end of the current year.

Business Notes.

Cost of Living.—In contrast to the decline in the level of wholesale commodity prices as shown by our Index Number, the cost of living is shown by the *Labour Gazette* to have risen in September. Our official contemporary calculates that at September 1st the percentage increase in the cost of living on July, 1914, was 161 per cent., while on October 1st this figure had risen to 164 per cent. At the time of the Armistice the figure was between 120 and 125 per cent. The percentage increase in retail food prices is given as 170 per cent. for the United Kingdom as a whole on October 1st, as compared with 167 per cent. on September 1st.

Employment in September.—Employment, on the whole, showed a decline in September. The *Labour Gazette* reports that the percentage unemployed among the members of trade unions from which returns were obtained was 2.2 at the end of the month, as compared with 1.6 at the end of August, while the percentage unemployed among workpeople in all the industries covered by the Unemployment Insurance Act was 3.80 on October 1st, as compared with 2.88 on August 27th. Movements of the trade union percentage in recent years, with 1913 figures for comparison, are shown below :—

End of—	1913. %	1916. %	1917. %	1918. %	1919. %	1920. %
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	1·4
August	2·0	0·4	0·5	0·5	2·2	1·6
September	2·3	0.4	1·3	0·5	1·6	2·2
October	2·2	0·3	1·1	0·4	2·6	..
November	2·0	0·3	1·1	0·5	2·9	..
December	2·6	0·3	1·4	1·2	3·2	..

It is stated that in many of the principal industries, including coal-mining, building, and agriculture, employment continued good ; but in engineering and shipbuilding it was not so good as in the previous month, while in most sections of the textile trades and in the leather, boot and shoe, and ready-made clothing trades it was slack.

Railway Statistics.—The railway statistics for the four weeks ended August 15th issued by the Ministry of Transport give for the first time particulars of passenger traffic. During the month of July the railways in Great Britain conveyed 152,392,497 passengers (excluding season-ticket holders). Of this number 68.26 per cent. paid full fares, 27.18 per cent. were workmen, and the balance of 4.56 per cent. were carried at other reduced fares. The average receipt per passenger was 16.09d. The figures of freight traffic for the four weeks ended August 15th, which included Bank Holiday, show that the total freight conveyed was 2,919,211 tons, or 10.8 per cent. less than in the preceding four weeks. Compared with the four weeks ended June 20th, which included Whitsuntide, the tonnage showed a decrease of 1,557,599 tons, or 6.1 per cent. The decreases in the tonnages of the principal commodities conveyed, compared with the two previous periods, were as follows :—

	Four Weeks Ended July 18. Dec. Tons.	June 20. Dec. Tons.
Coal, coke, and patent fuel	2,109,000	1,002,000
Ironstone and iron ore	6,000	92,000
Iron and steel	283,000	206,000
Pig-iron	63,000	35,000
Roadstone	34,000	5,000
Bricks	26,000	4,000
Timber	25.000	3,000

The estimated receipts per ton-mile, excluding cost of collection and delivery, were as follows :—

	d
General merchandise	2·640
Coal, coke, and patent fuel	·938
Other minerals	1·147
Total freight	1·553

The wagon load, train load, and train-miles per engine hour each show a falling off compared with the preceding four weeks. With regard to rolling-stock, during the four weeks ended July 18th 36 steam locomotives were completed and put into traffic, against 12 condemned, and 2,459 merchandise and mineral wagons built or purchased were put into traffic, against 1,384 condemned, sold, &c.

Bankruptcy in 1919.—The annual report on bankruptcy by the Board of Trade (No. 187, price 9d) records an increase in 1919 of the number of insolvencies and the estimated losses to creditors. In 1919 the cases under the Bankruptcy and Deeds of Arrangements Acts in England and Wales were 910 against 826 in 1918, an increase of 84, estimated losses to creditors being just over £1,000,000 higher at £1,971,892. These figures, however, look very small if we look back to pre-war records. In 1910, for instance, the number of cases was 7,244, with an estimated loss to creditors of £9,544,427. The report includes a comparative table showing the cases for the last five years as divided among the principal trades and occupations, and these contain some striking comparisons. Insolvencies among bakers numbered 15 last year against 240 in 1915; among builders 11 against 192; among butchers 5 against 142; among farmers 33 against 132; among grocers 41 against 374; among tailors 13 against 146; among those classed as "miscellaneous and no occupation" 56 against 635. The accounts of Bankruptcy Administration, which up to 1908 showed a small surplus, have since shown a steadily growing deficit, which reached £63,879 for the year ended March 31, 1920. With a view to meeting the deficit the Lord Chancellor has sanctioned an increase in fees amounting to roughly 50 per cent. Also the report expresses the somewhat grim expectation of an increase in bankruptcy business: —"It is anticipated that the withdrawal of restrictions on creditors' rights and with trade falling into more normal conditions there will be a revival of bankruptcy business, and that the increase in the fees will render the Department again self-supporting."

Cotton Mill Hours.—Our Manchester correspondent writes :—It is understood that the cotton operatives of Lancashire are preparing to make an application for a further reduction of the working hours in the mills. In July last year a demand was made for a reduction from 55½ hours to 44 per week. After negotiations with the employers the application was revised to 46½ per week, but ultimately a settlement was reached on the basis of 48 hours per week. It was agreed that no further change should take place until after the end of 1920. No official announcement has yet been made as to the new claim, but it is reported that within the next few weeks the trade union leaders will ask the employers for a joint meeting, for the purpose of discussing a further reduction in working hours from the beginning of next year. It is also understood that the workpeople are about to make a definite claim for payment of wages during the annual summer holidays. An application of this kind was included in the demands of the Operative Spinners' Amalgamation last April, when the wages question was considered, but ultimately the request for payment for holidays was dropped for the time being.

The Mesopotamian Outlook.—A correspondent writes :—With the relief of Kufa and the submission of Kerbela and Nejef, the two great centres of Moslem fanaticism, the rising has begun to decline, leaving the way clear for Sir Percy Cox to begin his task. Apart from some assassinations or attempts at assassination, the insurgents seem to have fought fairly and to have treated their prisoners well. The rising, promoted originally by Arab Nationalists, thoroughly sincere, but purely urban, has been aided by an active religious agitation, by propagandists from Syria, and by powerful chiefs who stood to gain by the revival of the anarchy prevalent after the Turks withdrew. The treatment of Emir Feisul by the French encouraged the insurgents to hold out; and, as Dr Hogarth points out in the current *Quarterly Review*, the elaborate organisation set up in the country under the influence of the Government of India induced a belief that Great Britain would not fulfil her promise to grant self-government. The fulfilment was inevitably postponed owing to the delay in granting her the mandate under the Treaty of Peace. Its achievement will be difficult. The rural population has no notion of anything beyond tribal organisation. Before our occupation became effective every boatload of merchandise traversing a certain stretch of 20 miles of the Middle Euphrates paid seven separate tolls to the riparian sheikhs. The Arab officials who served the Turkish Government have mostly been re-engaged, but the dearth of trustworthy candidates for minor posts is such that some of the local taxes are farmed. Much has been done by our Administration in providing local dispensaries, in sanitation, and in promoting the construction of flood banks, which in the Middle Euphrates region have doubled the rice crop. The "excessive taxation" alleged in some quarters in England appears to be increased rent, due to augmented production, the Government, according to the law inherited from the Turks, being the ultimate landowner. Pessimists have asserted that irrigation washes desert salt into the land and ultimately spoils it; but the salt can be washed out again, even by the primitive methods now employed, and with scientific irrigation the danger should be overcome, and the cereal yield largely increased. The sheikhs are said to be eager for roads and railways, and the oil resources can be safeguarded by giving the inhabitants of the oil districts an interest in their protection. But the native State and the British forces which must secure it will probably have trouble with the Kurds in the north, and the Arabs resent the employment of Hindu troops. The military outlay for 1920-21 is officially estimated at £28,000,000. It can hardly be recoverable, however wealthy Mesopotamia may become.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL ... £1,837,966.

The Company undertakes the issues of Capital for Plantation Companies, and the financing of Estates and Produce.

1-4 Great Tower street, London, E.C.3.

Labour Troubles in Luxemburg.—The institution by Ministerial decree of works councils in the iron and steel industry in the Grand Duchy of Luxemburg has set up difficulties between the workmen, the employers, and the Government. The position is described from the employers' point of view in the Paris *Temps* of Sunday last. The war powers conferred on the Executive in 1915 have not yet been withdrawn, and in April of last year the Ministry then in office issued, after a very brief notice, a decree instituting councils of workmen in all undertakings employing more than 50 persons, and empowering them to deal with questions affecting the wages, conditions of labour, and welfare of the employees. In November, when certain undertakings were transferred from German ownership, the men demanded that the councils should deal with all extensive engagements or discharges of labour, and be entitled to impose a veto by a three-fourths majority; that they should take a share in controlling welfare work, and that they should receive annual reports on the financial position of the undertaking and the wage bill. The Ministry then did nothing, but last July its present successor, under continued pressure from the workmen, issued a new decree making further concessions to them, and in September offered to appoint a commission of experts and workmen to consider the nationalisation

of large undertakings, railways, and banking. The workmen have since pressed and amplified their claims. The present Government has an absolute majority in the Chamber, and represents the Catholic party, which is purely rural; and both it and its predecessors have repeatedly imposed restrictions on the management of the mines and ironworks, either by legislation or by decree. Further concessions, it is thought, may set up a demand for similar privileges among the miners and ironworkers of Belgium and France. The workmen's case remains to be stated; and the future developments should be interesting.

American Cotton Crop.—At the beginning of this week the Agricultural Bureau of the United States Government published a report on the amount of cotton ginned up to the 18th inst., the amount being given as 5,712,000 bales, against 4,929,000 bales at the same time last year, 6,811,000 bales in 1918, and 5,573,000 bales at the same period in 1917. The statement on the whole was about equal to expectations, and since the publication of the statistics there has not been any revision of crop estimates, the general idea being that the yield will be between 13,000,000 and 13,500,000 bales, against 12,218,000 bales in the season 1919-20. In the ginning returns a feature of interest is the increase for the State of Texas, the amount so far this season being 2,596,000 bales, as compared with only 999,191 bales at the same time in 1919.

Danish Loan in New York.—The terms of the Danish loan for $25,000,000, which is being issued in New York through a syndicate of American bankers, headed by the National City Company are:—The bonds bear interest at 8 per cent., are dated October 15, 1920, and fall due for repayment in 1945. Redemption is provided for by a sinking fund sufficient to retire $1,250,000 of the bonds annually, beginning on October 15, 1925. The sinking fund will be payable by annual instalments, beginning in April, 1926. All sums received up to April 15, 1935, will be applied to the purchase of bonds in the open market at a price of not exceeding 110 up to that date, and not exceeding 107½ thereafter. Funds which are not so applied to the purchase of bonds before August 15th in any year will be applied on October 15th following to the redemption of bonds by lots at 110 until October 15, 1935, and at 107½ thereafter. The whole issue will be redeemable on October 15, 1925, or on any interest date thereafter before maturity at 110 if called for redemption before October 15, 1935, and at 107½ if called for redemption after that date. The bonds will be issued at par.

Coal Output in New Zealand.—In an official cable dated October 22nd received by the High Commissioner for New Zealand, it is stated that the coal output per miner in New Zealand, which in 1917 was 715 tons, fell in 1918 to 703 tons, and for 1919 was only 648 tons. Employment in New Zealand is plentiful, wages high, and there is little poverty. The Agricultural Committee of the New Zealand House of Representatives has reported against granting a meat export licence to Armours, Australasia, as being a subsidiary company to Armours, America, whose operations are considered inimical to the interests of the producer and consumer alike. The New Zealand Government is strongly opposed to the Meat Trust in any form.

E. G. Wrigley and Company.—The first published balance-sheet of E. G. Wrigley and Co., Limited, has just been issued, and reveals an unfortunate state of affairs. In March, 1920, this company issued a particularly frank and satisfactory prospectus, and from the information given it was assumed that the company had reasonable prospects of success. Now, however, the directors state that "owing in the first instance to the moulders' strike, and subsequently to difficulties which arose in manufacturing, the anticipated output was not attained, and consequently the profit earned on the company's products was insufficient to carry the dead charges incurred with the object of obtaining the largely increased turnover which had failed to materialise, the result being that, after making due provision for ordinary and special depreciation and bad debts and deducting the amount brought forward, there is a balance to the debit of profit and loss of £67,021 6s 10d. An interim dividend up to December 31, 1919, amounting to £20,000 was paid, absorbing the general reserve fund shown on the last balance-sheet." The company owes £280,805 to Lloyds Bank, and the assets include £175,683 of investments, "taken at cost." But the company has a good business, and the arrangement made at the general meeting on October 26th that a small body of shareholders should confer with the directors should help to enlighten shareholders as to certain details concerning which information is needed, and at the same time strengthen the hands of the directors in carrying out any scheme of reorganisation which may be necessary.

American Banks' Figures.—In a table on page 660 of last week's Banking Number the figures for American banks with London offices were given at the rate of five dollars to the pound. A correspondent draws attention to the fact that at this rate "American banks do not compare on an equal basis with British institutions," and at the same time points out that the figure given as the cash of the Guaranty Trust Company does not include an item given in the balance-sheet on page 718 under the heading of "Exchanges for clearing-house" $81,676,791, which appears to have been included by the other companies in cash in hand and at bank. With this addition the cash of the Guaranty Trust Company should be £33,963,140, instead of £17,627,782, as given in the table on page 660.

Trade with Dutch East Indies.—An address will be delivered to members of the London Chamber of Commerce by Sir Walter Townley, K.C.M.G. (ex-British Minister at the Hague and Governor of the British Chamber of Commerce for the Netherlands East Indies), on Tuesday, November 2nd, at 2.30 p.m., on "The Opportunities for British Trade in the Dutch East Indies." Mr Stanley Machin, J.P., President of the London Chamber, will preside, and Mr. William N. Dunn (late H.B.M. Consul-General at Batavia) has intimated his intention of being present.

Oversea Correspondence.

UNITED STATES.—ANGLO-FRENCH LOAN REDEMPTION—MONEY RATES—BAD MARKET—NEW ISSUES—TRADE AND PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 15.

MUCH relief is felt in financial circles that to-day's unusually large banking transactions were consummated without strain in any quarter. These included the redemption of the $500,000,000 Anglo-French loan; the retirement of $170,633,000 Treasury certificates of indebtedness, of which some $94,000,000 had been sold in the New York district; the payment of interest, approximating $130,000,000, on the fourth Liberty loan; and the Government's offering of about $100,000,000 new 5¾ per cent. certificates of indebtedness. All of these transactions were put through with no commotion whatever in the money market; even call money rates, which advanced temporarily during the week to 10 per cent., dropped to-day to 6 per cent. The paying off of the Anglo-French loan—by far the largest foreign loan ever negotiated in the United States—marks an important epoch in international finance; as one authority observes, the event is "a striking commentary on the solvency of countries which, according to predictions made at the time the bonds were sold, and on various occasions subsequently, were facing certain bankruptcy." Details as to how this obligation was met are not yet available; but it is estimated in well-informed quarters that about $300,000,000 of the bonds had already been purchased by the British and French Governments in the open market, principally by Great Britain. Of the French share of the maturity, $100,000,000 was provided

ALL the functions of a commercial bank center on the facilitating of business operations. The Irving organization groups its functional activities and lodges responsibility for conducting each group in a distinctive department. Whether the department has to do with import and export transactions or with domestic affairs, the result is a highly specialized and responsive service for Irving correspondents and customers everywhere.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

for by the recent new French loan here. The exact amount of gold shipped by France to this side in connection with the payment has not been disclosed. It is understood that an arrangement was made whereby the Bank of France opened a gold credit on behalf of the Federal Reserve banks, in return for a credit of like amount provided in this country by the Federal Reserve institutions. Guesses as to the total amount of gold provided in this way, plus the gold actually shipped, range from $50,000,000 to $75,000,000. The balance was probably met by purchasing New York exchange and accumulating bank balances in this country. With these heavy transactions completed, there are no more of a similar nature that should cause any pronounced or sustained stringency in the money market during the remainder of the year. An issue amounting to about $102,000,000 of certificates of indebtedness will mature on November 15th, but is not expected to have much, if any, effect upon money rates. On December 15th, when the final instalment on income and excess profits taxes will be payable, there will mature about $700,000,000 Government tax certificates. It is quite likely, however, that a new issue will be brought out by the Government before then, and it is believed the proceeds from tax payments and from the sale of the new issue will be amply sufficient to meet the heavy disbursements on that date. The feeling in banking quarters is that money will gradually work easier from now on, although not much relaxation seems likely until crop-moving demands, now at their peak, are satisfied.

In the securities markets the outstanding feature is the continued activity and strength of bonds. Under a broad and vigorous investment demand practically all outstanding issues, particularly railroad, industrial, and public utility bonds, scored further advances this week, many reaching new high levels for the year. Government bonds, both foreign and domestic, have shared to some extent in the movement. It is confidently expected that demand will be increased by the reinvestment of funds released through the Anglo-French loan redemption. New financing continues on a large scale. This week's offerings included $50,000,000 Sears, Roebuck, and Co. one, two, and three-year 7 per cent. gold notes, priced to yield from 7.60 to 7.85 per cent., which was quickly and heavily over-subscribed; $25,000,000 Anaconda Copper Mining Company 7 per cent. gold bonds due January 1, 1929, which were offered to the public at 96¼, and interest to yield about 7⅝ per cent. There were also several municipal and public utility issues in relatively small amounts, though running well into the millions in the aggregate. An issue of $5,000,000 City of Christiania, Norway, 25-year 8 per cent. sinking fund gold bonds is being floated here at 99 and interest, and $6,000,000 City of Zurich, Switzerland, 25-year 8 per cent. bonds will be offered next week, probably at a price between 99 and par. It is reported that other Swiss and Scandinavian cities and at least two Dutch cities are seeking loans here.

Further reductions in merchandise prices have taken place, and the deflation process seems likely to continue for some time. Many wholesalers and manufacturers, however, claim that prices have been marked down low enough, and there is an increasing disposition to maintain present levels and oppose sacrifice sales. This feeling appears to be most marked among dealers in raw wool, in the apparel trades, and other lines where repeated price cuts failed to stimulate buying. While many industries are active on old orders, new buying is still restricted to urgent needs. In fact, trade and industry generally are now quieter than at any time since the outbreak of the war.

FRANCE.—BUDGET—RAILWAYS—FOREIGN TRADE—SOCIETE GENERALE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 26.

THE Budget for 1920 has now assumed its final form before being submitted to the Chamber, and was on Saturday submitted by the Finance Minister, M. François-Marsal, for approval by the Ministerial Council. The estimated expenditure, which amounted for the current year to 21,761 million francs, was increased, owing to the additional demands of various departments of the Government in respect of the coming twelve months, to 26,160 millions. This, after careful pruning, in which M. Millerand himself participated, has been reduced by over 4,000 millions, and now stands at 22,027 millions, or only slightly in excess of the last budgetary estimates. This will constitute the Ordinary Budget, for the Finance Minister found that, after all, it would be impossible to suppress the "Extraordinary Budget," as he had originally desired. This Extraordinary Budget for 1921 will comprise exceptional expenditure arising out of the war, and notably certain important items of civil expenditure, certain allocations and indemnities resulting from laws brought into force during the hostilities (such as allowances to refugees, allowances in respect of the high cost of living), the restoration of the railways to pre-war condition, the subsidy to the Alsace-Lorraine Budget, &c. The estimated expenditure included in this Extraordinary Budget amounts to a total of 5,499 million francs. Then there is the "Special Budget for expenditure recoverable from the amounts to be received from Germany," under the Peace Treaty, which includes estimated expenditure amounting to 16,575 million francs. The Finance Minister estimates that the equilibrium of the Ordinary Budget will be assured by the yield from taxation, and he announces that he does not intend to bring forward any proposals for new taxation in respect of 1921.

The most interesting feature of the new Budget, for many reasons, is perhaps the series of estimates submitted by the Minister of war, which is as follows :—

	Francs.
Ordinary Budget	3,299,324,000
Extraordinary Budget	2,597,986,000
Budget of Recoverable Expenditure	14,500,000
Expenses of Occupation	635,064,000
Budget for Powder and Saltpetre	133,326,000
Total	6,680,200,000

Expenditure in respect of Morocco figures in this Extraordinary Budget for 591,000,000f. The estimated expenditure for 1921 in respect of Syria, Poland, and South Russia is also included in that portion of the Budget estimates. The military estimates for 1920 amounted to a total of 5,150,815,000f, or about 1,530,000,000f less than the new estimates.

In view of the fact that the question of the nationalisation of the remainder of the French railways will form one of the principal subjects of discussion during the Parliamentary session that has now been fixed to begin on November 8th, the present situation of these undertakings is interesting. Figures published recently show that the current year's working will undoubtedly result in a further serious deficit on the whole of the French systems, and especially on the lines owned and operated by the State. The deficit on the various lines will amount, by the end of the year, it is estimated, to the following sums (in round figurs) :—

	Francs.
Etat	520,000,000
Nord	400,000,000
Orléans	400,000,000
P.L.M.	300,000.000
Est	280,000,000
Midi	170,000,000

or a total of well over 2,000 million francs. It is true that the increased tariffs, both for passengers and goods traffic, came into operation only in March, and that the period covered by these figures includes the two disastrous strikes of February and May last, but even without these factors the situation would have been extremely unsatisfactory.

The present extraordinarily defective condition of the national rolling stock, moreover, also contributes to a somewhat gloomy outlook. According to expert opinion on the occasion of the recent disastrous railway accident just outside Paris, the catastrophe was due to this cause, and it was predicted that such disasters are certain to be repeated in the near future. The State line, in this respect, is much worse off than the privately-owned systems, owing to excessive wear and tear during the war, while Nord is suffering from the fact that several of its most important construction and repair centres, such as those at Denain, Lille, and Douai, were literally removed piecemeal by the Germans during their occupation of the Northern Provinces. For this reason, and owing to the disturbance created by the introduction of the eight-hours' day and other causes, it is difficult to see how any substantial improvement on the working can be expected for some time. At present between 2,000 and 3,000 new passenger coaches are urgently required on the State lines alone, whereas the deliveries are being made at long intervals at the rate of only 15 or 20 at a time. It is generally believed that an effort will be made to place the lines on a better financial footing during the coming session by an attempt to secure authority for a further increase of rates for both passengers and goods. On the last occasion, however, in December, 1919, the majority of the Chamber intimated, through the medium of M. Briand, that the increased rates then demanded were authorised only on the express understanding that better methods would be introduced in the exploitation of the railways. Since then, for one reason and another, matters have grown worse rather than better, and it is becoming more evident every day that nothing short of complete reorganisation, both in methods and material, is likely to prove effective.

The French trade returns for the first nine months of the present year, which have just been published simultaneously with the opening of the lists for the new National Loan, afford striking evidence as to the manner

ESTABLISHED 1810

THE MECHANICS & METALS NATIONAL BANK

OF THE CITY OF NEW YORK

Capital (fully paid), Surplus and undivided Profits

$25,000,000

in which the country is recovering its commercial equilibrium. The figures show that the trade balance against France, which amounted to 17,853,000,000f for the first nine months of 1919, has been reduced during the corresponding period of the current year to 10,652,000,000f. The detailed figures are as follows :—

	First Nine Months, 1919.	First Nine Months, 1920.	Increase or Decrease.
Imports—			
Foodstuffs	7,413,563,000	6,727,751,000	— 685,812,000
Raw materials	9,542,226,000	12,618,645,000	+ 3,076,419,000
Manufactured goods	7,611,631,000	7,842,675,000	+ 231,044,000
Total	24,567,420,000	27,189,971,000	+ 2,621,651,000
Exports—			
Foodstuffs	709,085,000	1,529,501,000	+ 820,416,000
Raw materials	1,205,090,000	3,661,821,000	+ 2,456,731,000
Manufactured goods	4,790,042,000	11,366,389,000	+ 6,576,347,000
Postal parcels	..	..	..
Totals	6,704,217,000	16,557,711,000	+ 9,853,494,000

The significance of these figures may be gauged from the fact that in normal times French imports exceed exports by between 20 and 25 per cent., the deficit being compensated for by " exports to the interior " and by the revenue derived from French investments abroad. For 1913 the foreign trade of France showed an excess of imports over exports amounting to 22 per cent. This percentage increased during the war to 31 per cent. in 1914, 180 per cent. for 1915, 232 per cent. for 1916, 358 per cent. for 1917, and 372 per cent. for 1918. With the armistice, the adverse balance began to become smaller, and amounted for 1919 to 242 per cent. only. During the first six months of the current year this figure was swiftly brought down to 50 per cent., and now stands, as the figures given above will show, at 39 per cent., or only about 15 per cent. less favourable than pre-war level.

A few weeks ago I pointed out that the proposals of the Société Générale were to reduce their nominal capital of 500,000,000f to 250,000,000f, but there has been so great an extension of business here that, simultaneously with this operation being concluded, there will be a fresh issue of 250,000,000f in partly-paid-up shares, which will be reserved for existing shareholders. As a result, while the nominal capital of the bank will remain at 500,000,000f, the company will be provided with new resources that its progressive development require. The general meeting called for October 11th has been adjourned to November 15th.

The situation of the Bourse has been rather more favourable this week, and the fact that the fortnightly settlement took place without difficulty is further evidence as to the relative absence of speculation. Inevitably, the loan, which is now being widely advertised, is a predominant factor in the financial situation, and the fact that ordinary securities remain well supported is regarded as welcome evidence of stability. French Funds have remained firm, the 3 per cents. rising from 53.85 to 54.60, and the 5 per cents. from 86.22 to 86.45. Banks have shown a remarkable improvement, Banque de Paris advancing from 1,535

to 1.630, Union Parisienne from 1,110 to 1,148, and Crédit Mobilier from 485 to 515. Railways have, on the whole, been dull, but shipping descriptions were rather more in demand, Chargeurs Réunis, for instance, increasing from 1,130 to 1,220. Metallurgical shares, without having shown any great advance, were more firm, Aciéries de France being at 854, as against 845, Creusot at 3,190, as against 3,098, and Chantiers de la Loire at 1,500, as against 1,470; on the other hand, St Nazaire has dropped from 1,290 to 1,265, and Pompey from 940 to 898. Tintos are slightly stronger, and Boleo is up from 826 to 840.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—FINANCES—EXCHANGE AND BOURSE—STEEL PRICES—CREDIT.

(FROM OUR CORRESPONDENT.)

BERLIN, October 23.

THE Budget for 1920 (year ending March 31st next) as at last submitted to the Reichstag balances at ninety-two and a-half milliards of marks, more than half of which falls in the extraordinary Budget. The Budget requires loan operations amounting to 52.6 milliard marks, or, allowing for the authority already received by the Government to borrow, to 32.8 milliard marks. In detail the Budget roughly agrees with statements made in advance by the Minister of Finance, and already reported from here. Summed up the totals are:—Total revenue (including loans) and expenditure, each 92,470,881,872 marks; ordinary revenue, 39,891,562,738 marks; ordinary expenditure, 35,343,647,032 marks continuing, and 4,547,915,701 marks one-time outlay; extraordinary revenue, 52,579,319,139 marks; extraordinary expenditure, 52,579,319,139 marks. The largest item in the ordinary expenditure is service of the Federal Debt, 12,693,000,000 marks; after which comes the Finance Department with 10,569,000,000 marks, of which 9,405,000,000 marks is paid to the States and municipalities; pension fund, 3,968,000,000 marks, of which 3,726,000,000 marks is a result of the war, and national defence, 3,025,000,000 marks. The revenue from direct and indirect taxes is estimated at 27,820,000,000 marks. The income-tax in this category yields 12 milliards; company tax, 900 millions; dividends and income-tax, 1.3 milliards; emergency levy, 3.5 milliards; and land tax, 220 millions. The non-recurring war tax on increment of wealth yields 4½ milliards. The export duties yield 700 millions. Among non-continuing liabilities is 3 milliards for cheapening food products. The cost of executing the Peace Treaty in the extraordinary Budget is estimated at 41,440,000,000 marks. The maintenance of the Allied troops in the West cost 15 milliards, and the cost of compulsory deliveries of coal, dyes, machinery, ships, &c., and of payment to Prussia for Saar coal and railway material is put at 25 milliards. The administration of the Federal railways and posts and of the Federal printing office are excluded from the ordinary Budget. The estimates of revenue in the ordinary Budget are criticised in some newspapers as rather too optimistic. Otherwise the Budget, with its enormous totals, has provoked very little comment. The feeling about the State finances has long been apathetic and hopeless.

The Bourse again this week showed its perverted optimism. The total quotations of the loans and stocks which are usually quoted as typical reached a week ago 14,429 as against 9,557 on June 1st, when the mark exchange was nearly at its best of the year. During the week most stocks continued to rise. Although the sole motive of the Bourse boom is the currency devaluation, speculators inconsistently took the fairly favourable Reichsbank statement for the week ending October 15th as a bull factor. The statement shows the customary increasing pressure upon the Bank, but shows a still larger return of public money to the Bank, and a decline in the note and Kassenschein circulation of 151.2 million marks, the note circulation increasing by 50.3 million marks, while the Kassenschein circulation decreased by 201.5 million marks. The centre of bull speculative interest was again mining and metals, and this time it was based upon further annual reports showing largely increased profits; in part also upon further fusion rumours and upon stories of large foreign orders for German goods, some of which are reported to have come from England. The General Electricity Company, in which is now 25,000,000,000 marks of American capital has received large English orders. The heavy reduction of iron prices by the "Eisenwirtschaftsbund" had no visible effect in checking stock buyers to-day. The stocks of the Phœnix, Rhenish Steel Works, Laurahuette, Harpener, Buderus, and other iron and mining companies closed the week between 25 and 85 per cent. higher than they started. Foreigners bought industrials heavily. In the State loan market the chief feature is the continued rise of the 3 per cent. Reichsanleihe, which has been going up for some time past, and to-day sold at 65.40, well above the 57.50 of the 3½ per cent. Reichsanleihe. Before the war the 3 per cent. was a foreign favourite, and it has remained so; it is bought by foreigners when Germany money is cheap, and so it follows the line of the "exchange securities" proper by rising when the mark exchange falls, though the other State loans move on different lines, and as a rule within narrower limits. Speculation by native Germans is ever expanding, and the congestion is enormous, but the plan to continue closing the Stock Exchange on certain days of the week has been abandoned, and instead the Exchange is opened earlier in the day.

Business this week was dominated by expectancy as to the attitude of the "Eisenwirtschaftsbund" on the question of iron and steel prices. The "Eisenwirtschaftsbund" is the compulsory All-German syndicate for heavy iron and steel products, which was created in April last as a link in the "Plan Industry." Immediately after meeting for the first time, the Bund raised prices; but on June 1st, and again on August 1st, it reduced heavily both pig-iron and steel prices. The question of a third reduction has been under consideration for about six weeks past. Reduction has been sharply opposed by the smelting corporations, who urged that the new fall in mark exchange had sent up the prices to Germans of Swedish and Spanish ores; and, further, that wages and coke had got no cheaper. In fact, an addition of two marks per shift is to be added to coal-miners' wages; and on this ground the Westphalian Coal Syndicate is pressing for permission to

charge an additional 25 marks a ton. This request has so far been rejected. The "Eisenwirtschaftsbund" has now refused to cut the pig-iron prices further, so that they remain at the prices fixed on August 1st. So far, also, the prices of rails have not been changed; but the prices of all other important products of the syndicated companies have been pretty heavily reduced. The maximum prices reached in May this year, the present prices, and the new prices which come into force on November 1st, and will hold good till April 1, 1921, are as follows:—

	May.	August-October.	From November 1.
Ingots	2,650	2,140	1,770
Blooms	2,900	2,260	1,895
Billets	3,125	2,365	1,995
Slabs	3,200	3,410	2,040
Structure forms	3,620	2,740	2,340
Bar iron	3,650	2,840	2,440
Wire rods	4,150	3,160	2,720
Thick plates	4,700	3,595	3,090
Medium plates	5,535	4,060	3,360
Thin plates	5,625	4,195	3,525
Hoop iron	4,050	3,185	2,740

The Government has come to grips with the private banks in the matter of State organisation of industrial credit; and it seems that the banks are resolved to make trouble unless it gives way. Newspapers which support the Government's plan publish strange particulars of the way in which the great banks treat small customers who need credit. In general, the banks, having to meet greatly increased outlay, have raised their charges; and as they willingly put their capital only at the disposal of the big "Schwerindustrie" corporations with which they are allied, they make small borrowers pay very heavily. The banks have further taken to charging commissions for carrying accounts as such, for collecting of coupons, and for other services which they formerly did gratis. At present the rate for industrial credit, nominally 1 per cent. over the Reichsbank rate, or 7 per cent., is usually swollen by various commission charges to at least 10 per cent., and often more. A considerable number of small factories are at present closed because of inability during the trade stagnation of the summer to get enough capital to keep themselves producing for stock.

The gold premium on import duties was this week raised to 900 per cent.

ITALY.—INDUSTRIAL UNCERTAINTY—A POSSIBLE SOCIALIST SPLIT—YIELD OF TAXES.

(FROM OUR CORRESPONDENT.)

TURIN, October 22.

THE first effects of the occupation of works are making themselves felt. The Director-General of Combustibles—a new official, born during the war—has recently sent a notice to newspapers to the effect that a part of his coal stocks will be put at the disposal of industry. The notice was partly prompted by the British embargo following the miners' strike, but was also caused by the decline in the trade imports of coal. In the two weeks ending October 17th only 8,000 tons of coal were imported into Italy on account of industry; of the 350,000 tons which Italy used to import monthly from Great Britain over half was on account of trade, and half on Government account; during the month of October private traders will import only 30,000 tons. A feeling of uncertainty as to the future of industry is spreading among employers, and they dare not import raw materials from foreign countries when the exchange outlook is uncertain, and the exact purport of workers' control over industry is not known Signor Giolitti has, indeed, said to a foreign correspondent that "control" has not the same meaning in Italian as in the English language. Control is not predominance of workers over employers, but simply "verification" of the results of the balance-sheets, somewhat on the line of "auditing" the books and accounts at the end of the year. But the workers' leaders are not of the same mind, and aim much higher; they tend towards a true "control," as a first step of a proximate nationalisation of industry. Their position is, however, somewhat contradictory; for when Signor Agnelli tendered his resignation of the post of chairman and general manager of the Fiat works, and advanced proposals for the transformation of this gigantic enterprise into a working men's co-operative society, the men's leaders recoiled and took time to reply. They say they fear the men are unprepared for such a task; they fear not being able to obtain credit and preserve useful trade connections. But if they fear failure in a single case, what of nationalisation of the whole industry?

The social and political movement may be said to have as its pivot the future attitude of the Confederation of Labour and of the Socialist party. The evolutionist section of the Socialist party held its meetings at Reggio Emilia last week. They were strong in their determination not to sacrifice to Lenin's orders the old guard of the party; so that a split of Socialism into two or three sections—communist after the Moscow fashion, centrist, and moderate—may be foretold for the end of the year, when the Socialist party will have their annual session. The best men of the labour world, the leaders of the Labour Confederation, are reduced to impotence by the contradiction between the sane, businesslike, progressive line of action they would follow in the interest of the working classes, and the extravagant politics of continuous strikes and agitation to which they commit themselves from fear of the extremist denunciations in the party Press.

That industry may again be put on her legs is in the direct interest of the State, for the recovery of the newly imposed taxes. These new taxes are giving good results. The capital tax, of which the first instalment was due on October 18th—in Italy all direct taxes are paid in six instalments distributed evenly over the whole year—is giving 354 million lire a year on the provisional assessment. When the assessment becomes definitive, the product will reach 700 million, and perhaps 1,000 million lire a year for a period of 10-20 years, according as the wealth of the taxpayer is mainly composed of stocks and shares or of land and houses. But what of the taxes on industry—income-tax and excess profits tax, which Parliament decided should go to 100 per cent. of war profits—if industry is reduced to a standstill by labour troubles? War profits were mostly invested in new machinery and plants. Taxpayers cannot pay to the Exchequer taxes in kind, they must give money; and money will not be forthcoming if employers cannot set themselves calmly to work.

AUSTRIA.—THE RESULT OF THE ELECTIONS—FUEL SHORTAGE—LIQUIDATION OF THE AUSTRO-HUNGARIAN BANK—CAPITAL LEVY.

VIENNA, October 19.

THE election has produced a remarkable victory for the Christian Socialists (82 seats), while Democratic Socialists (66 seats) and All-Germans (26 seats) have lost heavily. Communists did not win a single seat in the new Parliament. The fact that the Christian Socialists are the strongest party of the new Assembly means much better relations with Hungary, since the Democratic Socialists, partly pressed by their radical Bolshevist wing, have never made a secret of their animosity against the new Hungarian Government. Friendly relations with Hungary are of great importance for Austrian industry, which has to win there a large market.

By means of the current crop and provisions bought by the Austrian Government in Jugoslavia and Roumania, Austria will be provided with foodstuffs till March, 1921. But there is a great lack of coal, which is a serious danger. Stoppage of production by shortage of coal would mean a great increase of the unemployed, a great danger of social unrest, and a loss of the only possibility for paying the foodstuff imports by means of industrial products. The whole industrial life and mobility of transport will be crippled as long as the principal industries are not enabled to work at least at two-thirds of the pre-war capacity, which would need at least 800,000 tons of coal. From all sources Austria is promised to get about 500,000 tons a month. Lately, it was not possible to get more than 300,000 tons a month! Austria is awaiting a reasonable solution of its coal question by the Reparation Commission. Any recovery of industry and production is quite impossible as long as a great part of it is not able to work for shortage of fuel. A bitter cold, which has set in during the past few days, promises a total devastation of the woods near Vienna by poor folk, as it was last winter.

The three liquidators of the Austro-Hungarian Bank—Mr Whitman, Mr Zeuceanu, and Mr Luxardo—have begun their work. It is clear this liquidation is a very difficult matter, which will want a good deal of time. Article 206 of the Peace Treaty in its present form is quite unworkable, and it will be interesting to see how the liquidators—perhaps by means of a very free interpretation—will solve these difficulties. Besides, it is a matter of greatest importance for all financial institutions how the shareholders of the bank will be treated. Article 206 does not contain certain stipulations about this question, and the definite decision will make a very interesting precedent. It is the first time that the fortune of a shareholding company will be regulated by a peace treaty, and this fact raises most interesting questions for statesmen and lawyers, merchants and bankers. The next few months will bring the payment of the first rate of the capital levy. The Ministry of Finance has made great preparations; special clearing and paying offices have been established. The great industrial and commercial bodies have also established special offices for the information of their members. The "Währungsschutz," a great body of more than 400,000 industrials, merchants, little capitalists, &c., has held some very interesting public lectures by financial experts about all practical questions referring to the capital levy. All political parties are united in recommending the quickest payment possible, which is hoped to bring at least a momentary help for the country's miserable financial situation.

POLAND. — PEACE — POLISH-ROUMANIAN TRADE AGREEMENT—FOREIGN TRADE—THE BANKING SYSTEM—EXCHANGE REGULATIONS.

(FROM OUR CORRESPONDENT.)

WARSAW, October 22.

AFTER nearly seven years, Poland is at last at peace. Many years will be necessary to heal the wounds; but some effects of the peace are visible even now, a few days after the signature of the Polish-Russian agreement at Riga. The lack of railway material was hitherto principally responsible for the slow recovery of industry and trade. The Ministry of War is putting now a part of the rolling-stock which has been used by the troops at the disposal of the civil authorities. This has enabled the Ministry of Food to conclude an agreement with Roumania, according to which this country will provide Poland with 3,000 wagons of corn monthly. This import should help to relieve the food scarcity.

Statistics of foreign trade published a few days ago show that during the second quarter of this year notable progress was achieved in comparison with the previous period, from November to January, for which figures are available. This is shown by the subjoined table :—

	November-January. Tons.	April-June. Tons.
Import	156,572	431,609
Exports	8,016	82,343
Relation of exports to imports	5%	20%

Imports and exports have increased, but the progress of exports has been larger proportionately. While in the period from November-January the exports amounted only to 5 per cent. of exports, the proportion has risen in the second quarter to 20 per cent. If we take into account the fact that from the imported 431,609 tons 193,921 tons came from Silesia (coal), which may, partly at least, in a near future form a part of Polish territory, we see that the outlook of Poland's foreign trade is not so bad as is generally imagined. Polish imports are mostly composed of raw materials and food products. Thanks to the strict prohibitions of the Ministry of Trade, the quantity of imported luxuries is steadily declining. In the second quarter of this year Poland imported 302,471 tons of raw materials, 86,739 tons of food products, 2,186 tons of half-manufactured and 40,078 tons of wholly manufactured goods. Among the wholly manufactured goods the most important were paper (4,825 tons), chemical products (6,999 tons), machines (1,644 tons), agricultural implements (2,854 tons), cotton goods (1,032 tons), glass (1,302 tons), &c.

The greatest part of the imported goods came from Germany—out of a total of 431,609 tons, 302,247 tons, or nearly three-fourths. There was also some increase of imports from England, which from 6,229 tons in the first period have risen to 8,378 tons in the second. The progress of exports to England was much more rapid; it advanced from 1,400 tons to 8,725 tons. This export progress was accomplished in a period when the struggle with the Bolsheviks reached its climax. After the conclusion of peace the revival should be much more rapid. The principal Polish industry, which before the war was furnishing the bulk of exports—the textile trade—was hitherto working principally for the army, and was not able to produce for foreign markets.

The political frontiers existing before the war between the three parts of Poland divided the Polish banking system into three different compartments. The banks of Congress Poland were under the influence of the Imperial Bank of Russia, those of Prussian Poland were intimately connected with the Reichsbank, while the Galician banks were firmly wedded to the Austro-Hungarian Bank. With the foundation of the new Polish State, the banks have been faced with the problem of adapting themselves to the new political conditions. The function of a central bank has been taken over by the Polish *Landesdarlehnskasse,* which was formed in April, 1917, by the Germans in Warsaw, with the purpose of financing their administration and of relieving the Reichsbank of the pressure which was exercised by the great demand of German marks for the needs of Polish circulation. Actually the *Landesdarlehnskasse,* known under the name of Polish National Bank, is giving financial aid to the Polish Government in putting paper money into circulation. As soon, however, as conditions became more normal this institution will change its character, and will issue notes only in accordance with the commercial requirements of the country. Warsaw banks are now opening branches in Posnania, Galicia, Danzig, &c., and banks which were formerly only in contact with the commercial world of Austrian and Prussian Poland are extending operations to Congress Poland. The great number of new branches is a characteristic feature in the development of Polish banks since 1918. In 1918 and 1919 46 new branches have been opened. The capital of the Polish joint-stock banks before the war was relatively small. In 1914 the eight banks of Congress Poland had a capital of 80.9 million roubles, those of Galicia of 79 million kronen, and the capital of five Polish banks in Prussian Poland amounted only to 19.9 million marks. Besides this, there existed in Posen a German institution—the Ostbank—with a capital of 31.5 million marks. This bank has passed now into Polish hands. This capital has proved to be quite insufficient for financing trade and industry. In 1919 and in the first weeks of 1920 the Polish banks have increased their capital by 300 million marks, which corresponds to 75 per cent. of the whole capital they possessed at the end of 1918. In the last months hardly a week elapses without a new issue of shares by one of the principal banks. But even this increased capital is not sufficient, in view of the economic problems which have to be solved. In consequence there is a tendency towards combination and concentration. Foreign banks take part in these combines. For instance, a syndicate of nine English banks, with the British Overseas Bank at its head, has subscribed a part of the capital of the Anglo-Polish Bank (*Economist,* March 6th, p. 558). The Warsaw Discount Bank has signed an agreement with the Oesterreichische Credit Anstalt in Vienna, taking over the branch of this bank

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

in Lwów (Lemberg). The Bank of Commerce and Industry works in intimate connection with French banks.

Recently two new great concerns have been formed. One is composed of two Warsaw banks (the Bank of Commerce and the Bank of Commerce and Industry) and of the principal Galician bank (Bank of Little Poland). The other concern includes the most important banks of Posnania. Each of these concerns has a capital surpassing half-a-million marks.

The strength of the Polish banks has been clearly demonstrated during the Bolshevist invasion. Though a banking moratorium has been proclaimed, only a few banks, even in the most critical days, took advantage of it. At the request of the banks, the moratorium does not apply any more to their liabilities. It is only in force as far as bills of exchange are concerned.

The Board of Exchange, which came into existence in the beginning of August (*Economist*, October 9th, p. 554), has rendered all working of foreign trade impossible. The afflux of foreign bills ceased completely, and the Polish National Bank was brought by the short-sighted policy of the Ministry of Finance to the verge of an abyss. This is clearly reflected by the movements of the "Credits in foreign banks." From 1,273 million marks on August 31st they dropped to 175 million marks on September 30th. This is the lowest figure ever reached in the accounts of the bank. Under such conditions, the Government felt the disastrous consequences of its financial policy, which deprived the country of the possibility of continuing all import. During the last few days the structure of the Board of Exchange has been modified, and the foreign exchanges are again quoted on the free market, and are not subject to official interference.

The last market quotations are not much higher than those which were established by the Board. On October 20th foreign bills were quoted as follows :—

London	994-992
New York	278
Berlin	418-417
Paris	18·75
Brussels	19·75
Vienna	79·75
Italy	11·25
Switzerland	45·50

DENMARK.—THE AMERICAN LOAN—THE FINANCIAL POSITION.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 22.

THE new Danish State loan of $25,000,000, which came rather as a surprise, was settled in Paris last week by M. Glückstadt, Director of the Copenhagen Landmarcksbank, subject to the confirmation of the Danish Rigsdag, which was a foregone conclusion, and has since been granted. The American group of banks was represented by the National City Bank of New York. Denmark has thus followed the example set by Switzerland, Norway, and Christiania, but the terms are slightly different. Interest is to be at the rate of 8 per cent., and although the Norwegian loan, $20,000,000, was nominally also at 8 per cent., the actual interest, owing to certain circumstances, is stated to be about 9 per cent. The interest, of course, is high, but no payments on account of the Danish loan have to be made during the first five years, and in the course of that period the high exchange for the $, which at present greatly favours borrowers, will, it is confidently hoped, become more normal.

The financial position of Denmark, which cannot be gauged by the present position of the Danish kr, was the subject of a survey by M. Hassing Jörgensen, Minister of Traffic of the Zahle Cabinet, before the Society of National Economy, and the impression it left was not discouraging. During the last six years the ordinary expenses of the State had been 995,000,000 kr, and the extraordinary 1,126,000,000 kr. Of this aggregate of more than 2,000,000,000 kr, "high prices expenditure" accounted for 400,000,000 kr. The revenue from indirect taxation during the six years amounted to an aggregate of some 750,000,000 kr, and direct taxation yielded 1,041,000,000 kr. The exchange tax yielded 14,000,000 kr in 1916, 13,000,000 kr in 1917, 31,000,000 kr in 1918, and 13,000,000 kr in 1919. For the current financial year it was estimated to yield 14,000,000 kr, and for the next financial year 2,000,000 kr —figures which tell their own tale. During the six years the State undertakings (railways, &c.) showed a deficit of 40,000,000 kr, to which really ought to be added a further sum of 60,000,000 kr in "high prices" additional wage aid.

The final outcome of the six years was a deficit of 171,000,000 kr. Deducting a sum of 87,000,000 kr received through the sale of Denmark's West Indian colonies, a final deficit of 84,000,000 kr remained. On the other hand, several transfers meant an increase in capital of 72,000,000 kr, so that the actual deficit was only about 12,000,000 kr. As the national debt had been swelled by 564,000,000 kr, the assets side must have increased by 552,000,000 kr. Of this sum the larger portion was to be found under the head "cash in hand," which had increased from 28,000,000 kr to 352,000,000 kr. Large sums had been placed in different State undertakings and funds. The high prices for coal might, and probably would, hamper and handicap the country's industry, and the large ships' contracts and extensive stocks would most likely result in some losses; but there was no reason to take a pessimistic view of the position, and Denmark had no foreign debts.

Letters to the Editor.

THE RIGHT TO WORK.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It seems strange, in a country supposed to be not unmindful of the cause of freedom, that there should be the least shadow of a question of a man's right to work, including in this, of course, the right to work as hard as he pleases; but during the last few years it has not been possible for the British public to shut its eyes to certain ugly features in trade unionism, and the feeling is hardening that these will have to be thoroughly extirpated if trade unionism is to endure in our social fabric. All those who have intimate knowledge—as the present writer claims to have from long practical experience—of shop conditions, know very well the tyranny and victimisation practised by unionists against non-unionists. Such things ought not to be. Doubtless the workers should be members of some organisation for purposes of negotiation with employers, but this most certainly should not necessarily involve compulsory membership of trades unions *as they are now constituted*. A man may smart under the grievance of feeling himself insufficiently paid, but even this grievance is less than that of the conscientious worker who is not allowed to do his best if he chooses, and it must be included among the more serious and legitimate causes of unrest. Such a man struggles gamely for a time against tremendous odds, requiring the very highest order of moral courage, then he gives in, follows the crowd and the line of least resistance: otherwise it is no exaggeration to say that his life is unendurable.

Of course, the unions pretend that they admit a man's right to work—it is one of their fundamentals—and it is precisely because they do this that they hold no man shall do too much and thus reduce the amount available for others. Everyone knows that the worker's greatest anxiety is the risk of unemployment. It is a terrible nightmare to many, and is not always adequately realised by those who have comfortable and permanent berths, under Government or elsewhere. And it was only natural at one time that the workers and their unions should look upon employment as a fixed quantity, and that the more work one man did the less there would be for others. They had no one to teach them otherwise, and even now the arguments used against this superficial and childish fallacy are not always very clear or convincing. Sometimes, of course, this slackening down for the sake of less fortunate mates has in it an element or appearance of altruism, but more often than not it is used to make a virtue of laziness. They did not realise the beneficent circle, as opposed to the vicious circle—more and harder

work, more and cheaper goods, higher real wages, more and cheaper capital, more employment.

But if the nightmare of unemployment can be removed, then the last excuse, the last plank, for ca' canny is also removed. Some form of insurance against this is a first essential, but the problem is a tremendously difficult one, for we have to avoid any sort of premium on laziness, thriftlessness and incompetency, and any sort of discouragement of energy, thrift, and skill.

But, in any case, even if the workers do not yet know any better, the trade union leaders should realise by now the utter absurdity of ca' canny and restricted output, even from the unemployment point of view, and all the many forms of tyranny based on this should be rigorously put down. In this connection the work of the National Free Labour Association deserves serious notice. This association was formed 28 years ago, and now has a membership of nearly a million workers. In an advance copy of its twenty-eighth annual report, just received, it is stated that the association, among its other activities, has instituted free labour exchanges where 100 to 350 applicants are dealt with daily. Over 400,000 competent non-union mechanics have been found employment, and £130,000 paid in railway fares. Six hundred and eighty "senseless" strikes have been defeated in 20 years. The legal department has attended to thousands of cases of assault, illegal picketing, coercion, &c. There are also education, information, and publicity departments, and two newspapers, the *Free Labour Gazette* and the *Free Labour Press*. In a preliminary notice of the twenty-second Free Labour Congress, which it is intended to hold this year, the following resolution will be put:

"That this Congress of free labour representatives calls upon Parliament, the Press, and the public to insist on equal rights for all, and special privileges to none, to come to the aid of the patriotic ex-service men and willing workers who respect and obey the law, protect them from the so-called 'peaceful' persuasion, tyranny, and dictation of the Bolsheviks, Socialists, shop stewards, agitators, and trouble makers, who seek to ruin the trade of the country, destroy their employers' business, and rob the workmen of their freedom; protect them in their legal and moral right to work in industrial peace under the British flag, for which they have fought and bled; see that they get compensation and just treatment, and do all things necessary and expedient for the strict observance of 'open shop' conditions in the factories and workshops of the country."

The aims of the association appear to be well worthy of consideration and support.—Yours, &c.,

W. G. Cass.

CURRENCY AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

Sir,—We see that Mr A. G. Boissevain is asking what we may mean by "inflation in prices." We simply mean that if the price of commodity stated in gold is greater than the quantity of gold it will actually exchange for, that price is inflated by the difference between its nominal value, which is, say, £1, or one-quarter ounce of gold approximately, and the gold it will actually purchase, which is, say, about one-twelfth ounce, or six-and-eightpence worth.

This illustrates what we mean, but it must not be supposed that we think the whole decrease in the purchasing power of the £1 note is due to inflation of price. The £1 note has only depreciated about one-third—that is, it will purchase about 13s 4d worth of gold. The remaining 6s 8d worth of lost purchasing power is probably due to the rise in the cost of producing commodity; increased labour in its production relatively to the labour in getting the gold. Such extra cost is due to the disorganisation of industry by war, extravagant Government organisation, and especially Government control, subsidies, and other industrial interference. This cost might be reduced by better management and cheaper production; but the inflation can only be reduced by a fall of prices, which means unemployment, unless some other way of reducing the inflated wage can be found.

Mr Boissevain's suggestion that a fall in the foreign exchange value of the £1 note would prevent unemployment does not seem to meet the case. It would, in fact, be a fall in the price of exported goods, and necessitate a fall of wages and unemployment—as it is doing at the moment—unless the consumer's price of imported goods is put up enough to balance the loss in exports. In the latter case the cost of living goes up, then wages go up again, and prices again *ad infinitum*.

There is no positive reason why this debasing of our currency should not go on until gold was £1,000 per ounce and the £1 note not worth a penny. But there are in practice psychical reasons in the misunderstanding and disorganisation of industry which force us back to the reality. Whatever absurd value the £1 note may fall to, the real sovereign is worth a quarter-ounce of gold, and the quarter-ounce of gold is worth one sovereign only. And any commodity that embodies the same amount of labour as the quarter-ounce of gold does is worth £1, and £1 only. The sham value encourages bad business, miscalculation, over-priced stocks, and, as we suggested in the *Economist* of August 7th, it allows the rising wages to trench upon the profits made, while they are still in the form of capital or security for credit. Such securities would in such case not be of the value they were supposed to be, and that would lead to want of confidence and restriction of credit.

That restriction in times of inflated trade means reduced production and unemployment; in fact, a submitting to the inevitable fall of prices. Whichever way we turn we seem faced by an inevitable reduction of wages, and the only real economic question is how to prevent the consequent unemployment and reduction of output. Grumbling at the manipulation of credit seems to lead us nowhere; for the existence of credit depends solely on abundant production.—Yours faithfully,

Albert and Percy Wallis.

Westacre, Kettering, October 25th, 1920.

BANK AMALGAMATIONS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In connection with your review of Dr W. M. Westerman's book, *De Concentratie in het Bankwezen*, in your number of the 23rd instant, I note that you remark what a pity it is that the circle of Dr Westerman's readers is limited to those acquainted with the language of the Netherlands.

In this connection will you perhaps permit me to say that Dr Westerman intends publishing next year an English translation of his book, which translation I am taking upon myself to do.

Further, with regard to the fact that you mention that an index is lacking, I have recommended Dr Westerman that he include an index in his English edition.—Believe me, dear Sir, your obedient servant,

A. J. Fransella.

8 Drapers gardens, Throgmorton avenue, London, E.C. 2, October 26th, 1920.

ANGLO-POLISH TRADE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Mr Chrzanowski, director of the Warsaw Agricultural Syndicate, published in the *Economist* of October 2nd some interesting data relating to the quantities of goods which have been ordered in England by this syndicate. These figures show that the commercial relations between England and Poland are more important than could be concluded from official data which were available when I wrote my letter in July (*Economist*, August 14th, p. 264). The trade returns published a few days ago for the second quarter of this year, reproduced in my letter of to-day, are a proof of the growing commercial interchange between England and Poland.

It seems that Mr Chrzanowski did not read my previous letters in the *Economist*, otherwise he would not have added "for the information of the *Economist* correspondent," a fact (the export of 6,000 tons of sugar to England) which was mentioned by me in my letter of May 10th (*Economist*, May 29th, p. 1205).—I am, Sir, yours truly,

Warsaw Correspondent of the "Economist."

Books and Publications.

BY SEA AND LAND.

"By Sea and Land: Some Naval Doings." By E. Hilton Young, M.P., Lieut.-Commander R.N.V.R. T. C. and E. C. Jack.

ONCE a member of the *Economist* staff, some time City Editor of the *Morning Post*, and one of the heroes of Zeebrugge fight, Hilton Young has many claims on our readers' attention. Without them his book is claim enough. It gives a wonderful account of wonderful experiences, on the "Iron Duke" at Scapa Flow, on the Serbian front with a naval mission, on the "Centaur," in Flanders with the naval guns, at Zeebrugge on the "Vindictive," at Archangel and in the Russian forests on an armoured train. The story is written with a most effective mixture of art and simplicity—just the right frankness, just the right reserve—and many a touch of humour, genially grim. For instance, in the Archangel chapter:—"Our orders were to get the 'Askold' ready. .....She had been in the hands of the Bolshevik mutineers for six months or so; it was a few weeks only since they had been expelled from her; and as a result of their peculiar ways of life the whole ship was in an indescribably filthy condition. The cabins crawled with bugs, and the crew had made use of the engine room hatches as latrines. We found their log on board, and the last entry in it was, 'Held general meeting to consider the question of work.' To judge by the state of the ship, the question must have been answered unanimously in the negative." The chapter on Zeebrugge is worthy of the subject, and more could not be said. It was most fortunate, for us and for posterity, that one of the actors in this mighty feat of arms was a master of the writer's craft, and set down what he saw and felt.

A PRIMER OF WEALTH.

"Wealth, its Production and Distribution." By A. W. Kirkaldy, Professor of Economics and Commerce in University College, Nottingham. Methuen.

THIS is a new volume of Messrs Methuen's series on economics, and is a brief, sensible and on the whole very clear exposition for the general reader of the chief problems of production and distribution. Professor Kirkaldy is, however, rather likely to confuse an uninstructed reader by defining labour on pp. 21 and 22 in a way that might be taken to mean manual labour, and only making it clear some pages later that he means to include the work of the organiser and manager.

BUDGETS AND BOSSES.

"The Budget and Responsible Government." By Frederick A. Cleveland and Arthur Eugene Buck. Introduction by ex-President Taft. (New York) The Macmillan Company. 1920. 17s net.

THE people of the United States are never able to view the finance of any given year as a whole. The revenue is raised by one Committee of Congress and appropriated by others; the Executive is bound to make statements and recommendations, but Congress need not attend to them. This system tends to waste; it also, according to this book, gives the party Bosses their opportunity. It is they who direct the Committee chairmen and "co-ordinate" their action in the interest of the party, and of its unseen exploiters. The remedy advocated is to require the President to present a Budget annually, and, with the members of his Cabinet, to explain and defend it before Congress, of course without the right to vote. Budgets have, in fact, been established in 44 States of the Union. In 24 States the Executive is responsible for them: in the rest they are produced either by systematising the numerous administrative commissions and (sometimes) by associating these with the Legislature, or by the Legislature alone. The book, founded on an official Report of a Commission presided over by Mr Cleveland in 1910, describes these arrangements with great wealth of detail, and pleads effectively for real popular control of public finance. To the general reader its interest lies mainly in the indication it gives of the growing tendency in the United States towards Parliamentary Government.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
November 11.	November 12.

SWITCHBACK markets have been the order of the week in the Stock Exchange. They started off from a high platform of bullishness, dipped abruptly on news of the hitch in the negotiations between Government, coal-owners, and miners, and recovered again to a smaller extent towards the end of the week. There has not been a great deal of business doing, and the air of cheerfulness on Monday and Tuesday came about to some extent as the result of professional operations. The latest developments are received in the market with a mixture of feelings. If the coal settlement is to be of such temporary character as to require reviewing at the end of three months, it is held that people will not be anxious to embark upon investment, or speculation either. On the other hand, the uncertainty may prevent expansion in trade and employment of funds which otherwise would go into business, thus diverting a greater stream of capital into Stock Exchange securities.

The Stock Exchange will be closed on Monday for the usual November 1st holiday.

Deduction of the "clean" £2 10s interest from War stock

on Tuesday last led to activity in the market, but to no particular net change in the quotation, allowing for the interest. Consols have been dull at 45 sellers, apparently by reason of the extra attention now being paid to Local Loans. The price of the new Local Loans is still about ⅜ discount. Corporation and county stocks have been rising, and the market for Home Railway prior-charge issues is better. Amongst Colonials, the recent fall of Queensland stocks has been arrested by a disclaimer stating that the cabled speech relating to confiscation, said to have been made by Mr Theodore, the Premier of the colony, was a garbled version of what he actually said. There has been, however, no quotable recovery after the fall.

Foreigners have come into brisk demand, with Chinese issues more especially to the fore. Investors are inquiring into the prospects of Argentine, Brazilian, Chilian, and other such issues, while Belgian Threes continue to advance. French bonds have been heavy, and the Japanese dollar stocks moved back in sympathy with the New York exchange.

Home Railway stocks enjoyed mild improvements, partly on the expectation of the coal strike concluding, partly on a modicum of investment buying attracted by the 9½ to 10 per cent. yields offered by the dividend-paying stocks. The market showed a fair amount of robustness, and there was a flicker of business to support the improvements. Undergrounds shared in the advance, and the Scottish stocks also hardened. A slight rally in Grand Trunk ordinary lifted the price to 5, and rather more attention than usual has been paid to the company's guaranteed stock. Canadian Pacifics and Americans moved downwards as a whole, owing to the course of exchange. Mexicans are still dormant, but Argentines have had one of their periodical sharp improvements, which left prices better without attracting any noticeable volume of business. Three of the big railway companies are prospecting for oil in the Argentine Republic, with a view to getting fuel cheaper than the coal which they have to import from other countries, and if the search is successful, the result might make a very substantial difference to expenses.

Rubber has gone lower than ever, and after a brief rally in most of the leading shares, a dull tone set in again. Some of the Dutch shares are better, owing to the satisfactory character of the Anglo-Dutch report. Financial troubles are reported from Holland, and these are said to have had an unfavourable effect upon the market for raw rubber. In addition, they are declared to be the cause of the sharp drop in Royal Dutch shares in the oil market. Other oil shares developed buoyancy at the beginning of the week, on the expectation that the labour difficulties were on the point of settlement, but the rise lacked staying power, and, later on, part of it was lost. Nevertheless, there has been plenty of business, and public interest shows no indication of waning. In other industrial sections, Shipping and Textile shares enjoyed substantial recoveries, while Tobacco, Catering, Stores, Wireless, and Insurance shares exhibit a more confident tone. Gas stocks advanced substantially. Iron, coal, steel, and armaments were lifted on support from the North and West of England, but Thursday's disappointment imposed a mild check upon the rise.

With the movements in American exchange, the price of gold has gone back from the recent highest, and South African mining shares are moving erratically. Half-a-dozen of the Consolidation Mines Selection group came into favour, though the other market leaders suffered from neglect, and a little French selling. Chartereds improved on the eve of the company's meeting, but went back on the colourless nature of the proceedings. Russo-Asiatics spurted in consequence of the expectation that trade will shortly be opened to some extent with Russia. Amongst Mexicans, the Esperanza market has been tame as compared with its feverish condition of the past two or three weeks. The latest cable induced caution. Improvement in the price of tin, the metal, led to advances in East Pool and some of the other Cornish shares, while West Africans began to stir a little after their long period of inactivity. Various shares connected with Burma have been in the ascendant, on the recovery in the rupee, this affecting Burma Corporations, Bawdwins, and Lake Views, as well as several of the oil shares. The Indian mining market is heavy, owing to the Nundydroog proposals for raising fresh capital. Columbian Mining are being supported again. Rio Tintos again lost ground. The mining markets as a whole are not over-taxed with business.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The list for this series closes to-day. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Second Series.—Mr Chamberlain announced in the House of Commons on October 28th that the Treasury has decided to place on issue a second series of Treasury bonds, beginning on Monday, November 1st. The conditions will be the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. Holders of Exchequer bonds maturing on December 1st will be given the privilege of using their bonds ex dividend as the equivalent of cash at par as on November 18th for the purpose of subscription to Treasury bonds, in addition to receiving a full six months' dividend on December 1st on their maturing Exchequer bonds.

National Paper and Pulp Company (1920), Limited.—Authorised capital £300,000, in £1 ordinary shares, of which 150,000 will be issued in part payment of purchase price, and 150,000 are now offered for subscription at par. Eight per cent. first mortgage debentures are also authorised for £200,000, and these are now offered at 98 per cent., redeemable at 103 in 1939. The company has been incorporated to acquire the Wycombe Marsh Paper Mills, the Loudwater Paper Mills, the King's Paper Mills, all situate at High Wycombe, and the warehouses and offices in London of the National Paper and Pulp Company, Limited. The vendor company was formed in 1917 to acquire the various businesses comprised in the above sale. Surplus assets are valued at £389,435, and nothing has been charged for goodwill. Profits are given as £27,415 for 19 months ended December 31, 1918, £36,098 for 12 months ended December 31, 1919, and £54,608 for six months ended June 30, 1920. These, however, are arrived at before charging excess profits duty and other expenditure. It is perhaps surprising to find that although the mills have been established for "about 60 years," profits are given over such a short period. The purchase price has been fixed at £375,000, of which £150,000 is to be taken in ordinary shares, and the balance in cash. The ordinary shares are speculative. The debentures will be secured by a trust deed, and will constitute a first specific charge on freehold land and buildings, and a floating charge on general assets. They are repayable in 1939, or before that date by the operation of a sinking fund, by annual drawings or purchase in the open market. These debentures are moderately well secured.

Copestake, Crampton, and Co., Limited.—Authorised capital £800,000, in ordinary shares of £1 each. This is an issue of 533,334 ordinary shares at par. There are no debentures issued. The company has been formed to acquire the business of Messrs Copestake, Crampton, and Co., warehousemen and lace manufacturers, founded in 1826, and carried on in London, Nottingham, and elsewhere. The purchase price has been fixed at £505,201, of which £238,535 is payable in cash and 266,666 £1 fully-paid shares. Surplus assets are valued at £505,201, but no charge is made for goodwill. Profits are shown from 1917. The property and plant is taken over at independent valuations, but these are presumably valued on the basis of to-day's abnormal costs. It should be noted that profits for four years only are given. Book debts at £852,410 are guaranteed by the vendors. The vendors are taking a big proportion of shares in part payment of purchase price, and to that extent the flotation is favourable, but, on the other hand, stock values are at the high peak of prices. The big profits of the past few years cannot be regarded as normal figures. The directors are men thoroughly experienced in the business, and the terms of their remuneration are not unreasonable. The prospectus is a clear statement of affairs, with the exception mentioned above, and the issue is a fair industrial risk.

Lennards Real Property Company, Limited.—Authorised capital £400,000, divided into 250,000 7½ per cent. cumulative preference shares of £1 each and 150,000 ordinary shares of £1 each. Issue of 250,000 cumulative preference shares at par. The company has been formed for the purpose of purchasing from Lennards, Limited, boot and shoe manufacturers and retailers, certain freehold properties, including its factory at Northampton and its headquarters at Bristol. These premises will be let by the company to Lennards, Limited, on a repairing lease, and the prospectus states "upon terms which will ensure to the company an annual income of £30,000." These properties have been valued at £447,325. The dividends on the preference shares are, in addition, guaranteed by Lennards, Limited. "No debentures or mortgages" can be issued without the consent of 75 per cent. of the preference shareholders, and Lennards, Limited, take the whole of the ordinary shares in part payment of the purchase price. These preference shares are well secured as regards both capital and dividends.

The Distillers Company, Limited.—Authorised capital £4,000,000, divided into shares of £10 each. This is an offer to shareholders at par of one new ordinary share for every five preference shares, and two new ordinary shares for every five ordinary shares held by shareholders. The company states that the exact number of new shares to be issued cannot be determined until it is seen how many shares are actually taken up. But as the £10 ordinary shares were quoted at 16 13/16, and even now are quoted at 12⅜ ex-rights, it is reasonable to assume that most shareholders will exercise their option. According to the balance-sheet for the year ended May 15, 1920, the ordinary shares are reasonably well covered by assets. If the 10 per cent. dividend, free of tax, can be maintained on the ordinary shares when all the new capital has been issued, the directors will deserve well of the shareholders.

The Solicitors' Law Stationery Society, Limited.—Authorised capital £70,000, divided into 70,000 shares of £1 each, of which 37,590 have been issued. This is an issue of 25,000 shares of £1 each at 30s per share. The Society was founded in 1888, with a view to supplying solicitors with stationery on co-operative principles. It has had a prosperous career, and, according to a tabular statement published in the prospectus, since 1910 fairly substantial dividends have been distributed. However, no statement of assets or liabilities appear in the prospectus. As 12 per cent. is the highest dividend paid since 1910, with the exception of the year 1919, when it suddenly rose to 20 per cent., free of tax, the shares appear to be somewhat overvalued at 30s per share. In the absence, however, of much necessary information which the prospectus denies us, we cannot form a conclusive opinion on the issue, which the ordinary investor is likely to leave for the consideration of members of the legal profession.

Ervedosa Tin Mines, Limited.—Authorised capital £150,000, divided into 100,000 preferred ordinary shares of £1 each, and 200,000 ordinary shares of 5s each. Holders of preferred ordinary shares are entitled to a fixed cumulative dividend of 7 per cent. per annum, and the balance of profit, after payment of such dividend, is divisible in equal proportion between ordinary and preferred ordinary shareholders. This is an issue of the whole capital at par, but the information is published to comply with Stock Exchange regulations, and the advertisement is not an invitation to subscribe for the shares. The company has been formed to acquire the assets in Ervedosa, Portugal, of the Société des Mines d'Etain d'Ervedosa of Paris. A favourable report is given by Mr Paull, of South Crofty, Limited, of Camborne, Cornwall. The purchase price is fixed at £101,250, of which £6,250 is payable in cash and the remainder by the issue of 60,000 preferred ordinary and 180,000 ordinary shares. The property was acquired by the vendor for the sum of £53,125, of which it was agreed £6,250 should be paid in cash. No past financial results are given, and the value of assets is not mentioned. It is apparent that the plant is not in good condition, and considerable sums have to be expended on road construction, &c. Conditions in Portugal and the sad lack of detailed information are points to be carefully noted by any investor who may consider a purchase of these shares when appearing on the market.

Explosives Trades, Limited.—The issue of £3,000,000 8 per cent. seven-year secured notes at 96½ per cent. of Explosives Trades, Limited, having been fully subscribed, the lists are now closed. Country applications received by first post this morning (Friday) will receive consideration.

COMPANY MEETINGS, &c.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

RECORD RECEIPTS—INCREASED DIVIDENDS.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 27th instant, at River Plate House, London, Mr A. E. Bowen, J.P. (the chairman), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said that the accounts showed extremely gratifying results in comparison with last year. The gross receipts for 1919-20 constituted another record, being an increase of over £2,200,000. Owing to those great receipts the working expenses, which amounted to £885,000 more than last year, showed a ratio decrease of 8.77 per cent. The net receipts showed the satisfactory increase of £1,322,000. That rate of progress was mainly brought about by their carrying the greater part of two cereal crops in one year. The total expenditure of the year was £6,600,973. Last year he had ventured to prophesy that within a short period the shareholders would be receiving dividends equal to those paid before the war. They were already back to that 7 per cent. dividend, and, unless the cereal crops were lost or badly damaged by climatic conditions, there was every possibility that they might continue to pay that moderate rate.

They had been favoured during the year, as a good part of the 1917-18 wheat crop was still uncarried, so that they had had to deal not only with that, but practically the whole of the 1919-20 crop. They had had a very slack time for the last few months, but the much-needed good rains had lately fallen, completely changing the outlook of the coming crop of cereals, so that the prospects of another good crop were fair. Owing to the continually-increasing costs they would have to be allowed to increase their tariffs. In that respect the travelling public and the users of the railway were still in a very favourable position in the Argentine in comparison with the public in England or the United States. In view of the terrible prices for coals, it was vital to them to obtain oil fuel, and with that end in view they had entered into a contract with two other railways to obtain control over an oil property for some years. He had little doubt that they would get an ample supply and that the venture would turn out to be good business. The latest cable from the other side showed that the prospects for the current year were quite good.

The report was adopted.

CENTRAL URUGUAY RAILWAY OF MONTE VIDEO, LIMITED.

HIGHER TARIFFS FOR NEXT YEAR.

The ordinary general meeting of the Central Uruguay Railway of Monte Video, Limited, was held, on the 26th instant, at River Plate House, London, Mr Frank Henderson (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross receipts of the main line showed an increase of £54,700 and of the combined system £100,000 as compared with the previous year. The outstanding feature had been the improvement in the passenger traffic. There had been an increase of 16 per cent. in the number of passengers carried and nearly 19 per cent. in the earnings. In ten years the passenger traffic had practically doubled both in volume and earnings. The goods traffic had also been satisfactory. During the year they had carried some 46,500 tons more than last year, and the earnings were up by £70,600. The cereal crop had been a poor one owing to adverse climatic conditions, and there had been a heavy falling off in the tonnage of forest products. Messrs Armour and Co., who had constructed a large chilled meat factory at St Anna, commenced forwarding meat in January last, and during the six months to June the railway had carried 7,500 tons of their products. At the moment operations had been temporarily suspended, but they expected to restart working next month on an extended scale. The quantity of building materials carried had increased, and there was an increasing demand for fencing wire and general merchandise. Passengers showed an increase of £80,000, parcels and luggage £14,400, and goods £70,600, against a decrease of £51,700 in animals.

As regarded working expenses, the percentage in the case of the main line was 75.93, as against 78.90, and in the combined system 65.82, compared with 68.03. The largest increase was under the heading of salaries and wages. Another item which had swelled the exependiture was the increased cost of materials, but the discontinuance of wood fuel for locomotive purposes had caused a considerable saving. He was afraid, however, that their coal bill would be somewhat higher during the current year. The traffic returns since July 1st showed a substantial falling off, and the board had been reluctantly compelled to take steps to increase the tariffs, so as to provide a revenue sufficient to cover the increasing expenses. The new tariffs would come into force as from January 1st next. A cablegram just received stated that the prospects were satisfactory.

The motion was unanimously adopted, and at subsequent general meetings of the Northern Extension and Eastern Extension Companies the report and accounts were adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

"BEST ACCOUNTS IN THE HISTORY OF THE COMPANY."

The thirty-first ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 26th instant, at River Plate House, London, Sir Henry Bell, Bart., presiding.

The Chairman, in moving the adoption of the report, said that the accounts were the best in the history of the company, but he feared to some extent the comparison they would make with succeeding years. Already during the current year traffics showed a very large reduction. This was due to the fact that they carried, during the year under review, a large portion of the 1919 wheat crop and all the 1920 crop, so now, until the next crop was ready for transit, they had little grain left to carry except the maize of this year's crop. Not only was there a good demand for all the grain Argentina could produce, but prices were very high. It would be noticed that working expenses had increased by £854,910, and that arose mainly from two causes—higher wages and dearer fuel. Wages had to be advanced because the cost of living in Argentina had advanced, as it had in every other country, and they had secured increased tariffs to cover the higher wages. They had hoped and expected that with the end of the war coal would became at least cheaper, if it did not return to its pre-war rate; but instead coal had become scarcer and dearer, and England had become almost a negligible source of supply so far as foreign countries, apart from the continent of Europe, were interested.

Under the circumstances, they had looked around for other fuel. A company which had oil wells on a property adjoining the Government oil fields at Comodoro Rivadavia had been approached, and a well-known oil engineer had visited the property and given a favourable report. An Argentine company, consisting of the Buenos Ayres Great Southern, the Buenos Ayres and Pacific, and their own company, had been formed to lease and work that property, and if they were successful in getting the quantity of oil they were told they might reasonably expect, they had solved the fuel question. Although there had been a general feeling of unrest, they had experienced only one strike during the year, and that was the boilermakers; but after being out eight weeks they returned to work on the old terms. The company's relations with the authorities were most cordial, and a cablegram had just been received from Buenos Ayres which was entirely favourable. It stated: "Recent rains have entirely altered for better prospects as regards 1921 crops.....Generally, the outlook for 1921 very satisfactory."

The report was unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED.

SATISFACTORY RESULTS—CURRENT YEAR'S PROSPECTS.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 28th instant, at River Plate House, London, Sir Joseph White Todd, Bart. (the chairman), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said that they had now 51,730 shareholders, of whom 44,137 held less than £1,000 each. That showed that railway capital was far from being in the hands of a syndicate of capitalists, but was spread over a vast number of small holders, who still believed in Argentina's credit, and were not only dependent on, but entitled to, a fair return on their investments. Therefore, the Argentine Government would, he was confident, appreciate the necessity, in the best interests of their own country, for a just and reasonable income being assured to the railways; otherwise, it would be difficult in the future to raise money in this country for railway purposes in Argentina.

With regard to the year's business, the full and lucid report of the president of the local committee, Dr Frias, and of Mr C. H. Pearson, left him little to say, except that the results eloquently justified the statement he had made a year ago, that they had turned the corner, and that he would be disappointed if they did not soon get back to their pre-war dividend. Under almost every head of tonnage handled there were increases, while the gross receipts established a record. In one word, gross receipts had increased by £2,844,000, while working expenses had only risen by £746,000, leaving an improved net profit of, roughly, £2,100,000 over last year.

Some shareholders might feel that the board could have recommended a higher dividend. They had considered the advisability of this in order to compensate in part for the inadequate distributions made during the war, but they thought it more prudent to strengthen the company's funds, and so contribute to the maintenance of dividends in the future. From the difference in exchange they had replaced in the general reserve the £300,000 drawn out last year to help pay the dividend of 2 per cent. Reviewing the year as a whole, they had evidence, as he had so often said, of the wonderful natural resources of the Argentine Republic; its possibilities were only limited by the extent of its population and its means of communication and transport. They were showing weekly results this year even better than last year, their traffic receipts yesterday being £208,000, against £187,000, or an aggregate increase at £3,356,000 for the 17 weeks ended 23rd inst. of £664,000.

The report was unanimously adopted, and the usual formal business transacted.

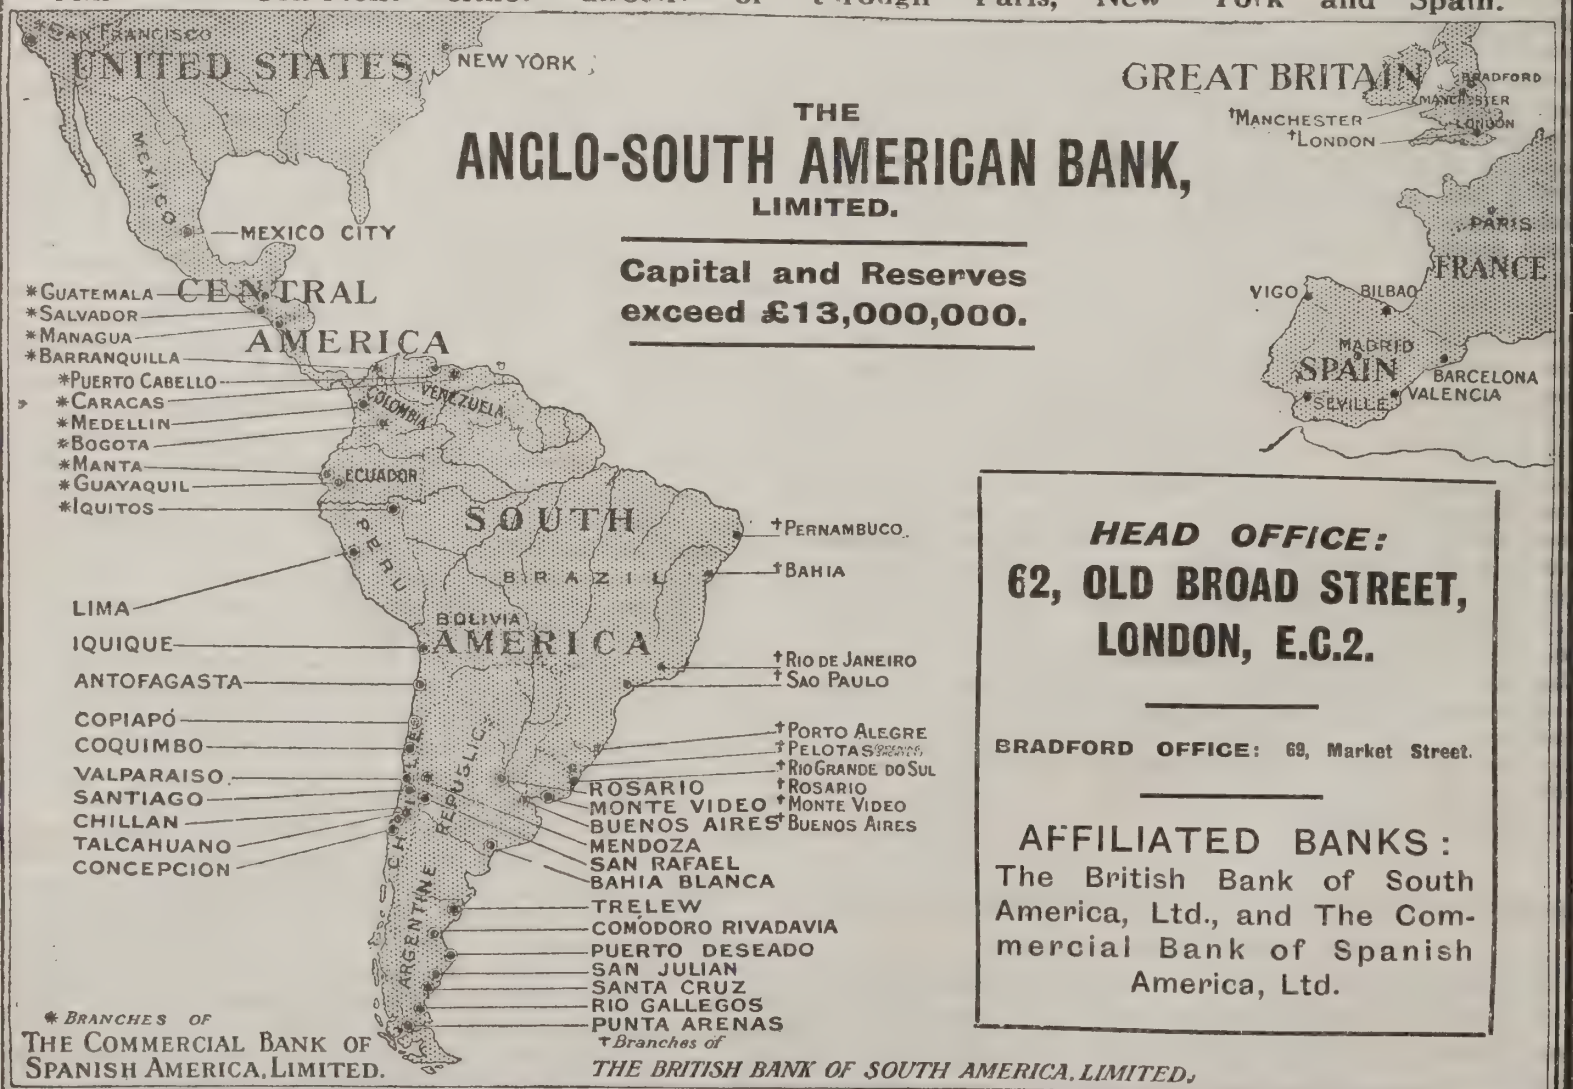
AFRICAN BANKING CORPORATION, LIMITED.

AMALGAMATION WITH STANDARD BANK OF SOUTH AFRICA APPROVED.

An extraordinary general meeting of the African Banking Corporation, Limited, was held on October 25th at Winchester House, Old Broad street, London, for the purpose of submitting the following resolutions :—

(1) That it is expedient to effect an amalgamation of this company with the Standard Bank of South Africa, Limited, and that with a view thereto this company be wound up voluntarily, and that John Chancellor Alleyne, Charles Lammond, Francis Shipton, and Bertram Lowndes be and they are hereby appointed liquidators for the purpose of such winding up, with power to act in all matters severally as well as jointly.

(2) That the conditional agreement submitted to this meeting be and the same is hereby approved, and that the liquidators be and they are hereby authorised pursuant to Section 192 of the Companies (Consolidation) Act, 1908, to adopt the said agreement and carry the same into effect, with such, if any, modifications as the said liquidators may think expedient.



The Right Hon. the Earl of Selborne, K.G. (the chairman), presided.

The Chairman, in moving the resolutions, said: Besides the nature of the agreement, I ask you to consider the present general situation of banking in South Africa. Owing to the abnormal financial situation that exists all over the world, and the difficulties of maintaining gold reserves and currencies, the banking situation in South Africa, as elsewhere, has not been free from anxiety in the past few years.

By a recent Act of the Union of South Africa a currency of legal tender in the shape of gold certificates has been established,

THE SOUTH AMERICAN BANKS.

This Map indicates the points at which the Anglo-South American Bank, Ltd., and its affiliated Institutions, The British Bank of South America, Ltd., and The Commercial Bank of Spanish America, Ltd., are established to assist trade with the South American Continent either directly or through Paris, New York and Spain.

THE
ANGLO-SOUTH AMERICAN BANK,
LIMITED.

Capital and Reserves exceed £13,000,000.

HEAD OFFICE:
62, OLD BROAD STREET, LONDON, E.C.2.

BRADFORD OFFICE: 69, Market Street.

AFFILIATED BANKS:
The British Bank of South America, Ltd., and The Commercial Bank of Spanish America, Ltd.

* *Branches of* THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

† *Branches of* *THE BRITISH BANK OF SOUTH AMERICA, LIMITED.*

and by the same Act a Central Reserve Bank has been constituted and will soon come into operation. This Reserve Bank will hold the gold reserves of the country, and have the sole right of issuing notes. I am not going into the merits or demerits of this Act, but I wish to point out that, taken by itself, it creates a new situation in South African banking, the full effects of which cannot yet be foreseen. Under these circumstances, whatever the difficulties of the future may prove to be, this amalgamation will enable us better to surmount them and to give our customers a continuance of the business facilities they are entitled to expect from us and to increase the banking resources to the public in that country where our chief work lies.

I and my colleagues advise the policy of amalgamation for the simple and definite reason that in the difficult times ahead of us all, economically and politically, the amalgamated bank will be in a better position to do its work, in the interests of both the shareholders and the public, than either bank would be separately, and this argument, of course, applies with even more strength in the case of the smaller bank, ours, than in the case of the larger bank, the Standard. I commend the amalgamation to you as wise and honourable to both banks alike. The question remains for us to-day whether the terms of amalgamation are fair to the shareholders and staff of the African Banking Corporation. I submit to you that they are fair.

You are asked to vote on what is a fair, simple business proposition on favourable and equitable terms to the shareholders of this bank. If the necessary resolutions are passed and confirmed, and the amalgamation goes through, the combined capital of the amalgamated bank will be £8,900,000, the reserve will be about £2,900,000, and the deposits and other accounts will be over £60,000,000.

The shareholders of this bank will get two shares in the Standard Bank for each three shares they hold in this bank, which at the date of the agreement would have given them a market value of about £24, with a prospective dividend of 16s 6d per share, instead of 10s per share which we had been paying. In addition, a return of 5s per share will be paid in cash, and a further 1s 9d will be paid in cash as an equivalent for the dividend which might have been expected to be paid up to June 30th last. From that date the shares rank for dividend *pari passu* with the shares of the Standard Bank, except that they will not participate in the interim dividend payable in October for the period up to June 30th.

These terms in themselves give good ground for satisfaction, and your directors, therefore, have pleasure in laying them before you and in recommending them for your acceptance. We anticipate from the union increased strength, business, and profits. I will ask Lord Midleton to second the resolutions which I have proposed.

The Earl of Midleton, K.P., seconded the resolutions, which were carried unanimously.

BRITISH SOUTH AFRICA COMPANY.

THE CLAIM AGAINST THE CROWN.

The twenty-fourth ordinary general meeting of the British South Africa Company was held, on the 28th inst., at the Cannon street Hotel, London, Mr Lyttelton Gell (the president) occupying the chair.

The President, in moving the adoption of the report and accounts, said that for the third year in succession he was forced to explain that the annual meeting had been delayed by the hope of arriving at one stage nearer to a definite conclusion as to the future relations, administrative and financial, between the Imperial Government and this company and the inhabitants of South and North Rhodesia. Two years ago they were waiting for the decision of the Judicial Committee of the Privy Council; last year they were waiting for the announcement of the Cave Commission, and to-day they were still waiting for its award. The delay was unfair, not only to the shareholders, but also to Rhodesian settlers, officials and traders, and to the great railway, mining and industrial companies of a country which, pending a settlement, had been prevented from taking the fullest advantages of its opportunities for development. The president proceeded to explain the position with regard to the investigation of the company's claim on account of the accumulated deficits on the administration of Southern Rhodesia, amounting to about £7,500,000, exclusive of interest, and stated that as far as the directors knew the Attorney-General's inquiries were still being prosecuted in Rhodesia. He (the president) believed that the company's difficulties were sympathetically realised by the Secretary of State and the officials of the Colonial Office, but he held that the Government departments might have acted more promptly. It rested with His Majesty's Government to satisfy themselves whether the local community was ripe for autonomy. Should his Majesty's Government, either now or at any yearly date, decide that Southern Rhodesia was fit for self-government, the company would cordially concur in their decision. What higher tribute could possibly be paid to the work of a corporation such as theirs than to pronounce that in 30 years it had brought a great territory from a state of primitive savagery to a condition in which it was fit to take its place among the self-governing dominions of the Crown? The President, after denying the allegations of the Aborigines Protection Society and other people that the natives had been deprived of all land and cattle, stated that the liability for the expenditure, amounting to over £1,900,000, for military operations against the King's enemies during the great war, was still in suspense. The directors were advised that no liability for this expenditure rested upon the company. Referring to the company's business and finance, the President said that a slight fall in the output of gold in 1919 as compared with 1918 was more than offset by the premium on gold, the effect of which, however, would only begin to appear in next year's accounts. There was an increase in value of over £200,000 in the production of minerals other than gold during 1919 as compared with 1918. The Rhodesia Railway system was rapidly recovering from the depression caused by the war and the influenza epidemic, the gross revenue for the year ended September 30th having increased from £937,603 in 1916 to £1,432,177 in 1920; but the working expenses had grown no less rapidly owing to the increased cost of materials and the additional remuneration of the staff and employees, so that the net earnings for 1919-20 stood at £544,397, as against £549,524 in 1916. From December 9th next, however, increased rates on fuel and on copper would bring in additional net revenue. The company's ranching undertaking consisted of two ranches—Rhodesdale, of about 1,000,000 acres, and Nuanetsi, of about 2,500,000 acres. Of these Rhodesdale was approaching the stage when it could be considered fully stocked. It carried to-day about 36,000 head, while the work of developing water and of fencing paddocks was being kept well abreast of the number of cattle on the ranch. Nuanetsi was at an earlier stage of development. It carried to-day about 51,000 head of cattle, but the carrying capacity of the ground being greater in this district than at Rhodesdale this number should be increased. There was every prospect that the undertaking would prove highly remunerative, in view of the great activity in the cattle trade of Rhodesia. All the company's estates, with the exception of Shangani, which was not yet sufficiently advanced for the receipts to equal the working expenses, showed a profit.

The cash position of the company was a strong one. Excluding the military expenditure incurred in the late war, the position was that for the year ended March 31, 1919, they had an excess of commercial revenue over expenditure of £229,489, as compared with £167,345 in the previous year. The company's resources in cash and first-class securities at March 31st last amounted to £1,785,000. In conclusion, the President said that when they were relieved of the administration and all further financial responsibilities on that head the great enterprises they were creating would be ripening and expanding, and the directors felt confident that a company drawing its revenues from widespread mineral formations, from ranches, irrigated lands, citrus plantations, the cultivation of wheat, cotton and maize of exceptional value would not fail to earn increasing dividends for its public-spirited and long-suffering shareholders.

Sir Henry Birchenough, Bart., K.C.M.G., seconded the motion, which was unanimously agreed to.

ERINOID, LIMITED.

RECORD PROFITS—ISSUE OF NEW CAPITAL PROPOSED.

The fifth annual general meeting of the shareholders of this company was held, on the 21st instant, at the Institute of Chartered Accountants, Moorgate place, London, Mr Andrew Binnie (the chairman) presiding.

The Chairman said: At our meeting in November of last year I ventured to predict that this would be a record year, and it has proved so both as regards sales and profits. The sales for the year have increased by 70 per cent. over the sales of last year, and during the few weeks which have elapsed since the accounts were closed the sales show a further increase of 30 per cent. This continuous increase is not surprising, having regard to the many uses to which our material can be put. I am frequently asked what Erinoid is used for. As a matter of fact, we can see it nowadays practically anywhere. Coming up to the City in the morning I often see Erinoid in the shape of buttons, umbrella-stick handles, buckles, hat pins, beads, and necklaces, and I have occasionally seen an industrious person knitting with knitting-needles made of Erinoid. There are also large quantities of cigar and cigarette tubes and pipe stems made of our material. In kinemas, as you may have noticed, pianos are worked very hard, and I am told that in those houses they prefer piano keys made of Erinoid because they stand the wear and tear better than any other material. I have by no means exhausted the uses to which Erinoid can be put, but I think the secret of our success is that we have a very uncommon material for which there is an uncommon demand for use in making every-day things.

THE ACCOUNTS.

Turning now to the accounts, a summary of the balance-sheets for 1916-1920 discloses some very remarkable figures. I might point out that the profits in 1916 were £8,000 for ten months, and in 1920 they are £64,000. The profits for 1920 are more than double those of last year, and £30,000 more than those of our previous best year, which was 1918. The figures of capital are still more remarkable. In 1916 the total assets of the company were £66,500, and the share capital £33,000, while in 1920 the total assets are £328,000—an increase of more than £250,000—and the share capital stands at £175,000, or an increase of only £142,000. We are carrying assets to the amount of £328,000 with a share capital of £175,000. Of the total assets the fixed capital amounts to £121,000, and the floating, the realisable assets, to £207,000, so you will see that the liabilities are covered two and a half times by the floating capital alone, without reckoning fixed capital or anything for goodwill.

There are other considerations affecting this question. We have now developed the factory at Stroud to the utmost, and we cannot under present conditions build down there. We have, therefore, bought a factory at Yate, not far from Bristol. That factory is a modern, up-to-date building, where we can lay out additional plant on ideal lines. It is well adapted for mass production of those lines for which there is a continual and a large demand.

COMPANY'S EXPORT TRADE.

I would remind you again that the use of Erinoid is not confined to Great Britain. We are doing a large export trade. In view of the high tariffs abroad it may no doubt be expedient sooner or later to manufacture abroad to some extent in order to get inside the tariff wall. We must remember that goods made abroad can be sold there under rather exceptional conditions. Tariffs prevent dumping, or any other form of unfair competition. I should perhaps make it quite clear that we have no intention of leaving this country; it is only a question of expediency. It may suit us to supply certain foreign markets by making abroad, but we shall continue to supply the whole of England and many other countries from here. I need hardly say we shall move prudently, and under the very best advice. We have reserved for taxation a sum of £26,000. To arrive at the reserve we have had to put our profits together in three different ways—one for income-tax, one for excess profits duty, and still another for corporation tax—each differing from each other, and each differing from the figures in the balance-sheet.

Coming back to the figures, the reserve account, excluding reserve for depreciation, will amount to £62,337 with the additions which we are making to it this year. As to the future, my feeling is we have a business which is quite unique in the application of science and mechanics to increased production by utilising a waste material. Our one immediate requirement is additional share capital. We propose to take steps to issue new capital immediately. Shareholders will be given the same opportunity as before to subscribe, and we are going to suggest the same premium as before—that is to say, 5s a share. I now beg to move :—"That the directors' report and accounts for the year ended August 31, 1920, as submitted, be received, adopted, and approved; that the available balance at profit and loss account, £21,403 3s 11d, be applied as follows—a dividend of 15 per cent., making 22½ per cent. for the year, less income-tax at 6s in the £, £18,375; carry forward to next account, £2,668 3s 11d."

Mr Walter G. Waldron seconded the resolution, which was carried unanimously.

BURBERRYS, LIMITED.

GOOD RESULTS OF YEAR'S TRADE.

The first ordinary general meeting of Burberrys, Limited, was held, on the 26th instant, at Prince's Restaurant, Jermyn street, London, Mr R. H. Prestwich (the chairman of the company) presiding.

The secretary (Mr Geoffrey Bostock, F.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said :—As you are aware, the company was formed in January last for the purpose of combining the old-established businesses of Burberrys, Nicolls, and S. and J. Prestwich. Under the contract of sale between Messrs Burberrys and the Limited Company, the purchase price was fixed at £1,050,000, payable as to £53,500 in cash, and as to the balance by the allotment of 250,000 preference shares and 746,500 ordinary shares of £1 each, fully paid, and such consideration has been paid and satisfied in full. By the terms of the purchase agreement the company was entitled to all the profits made since April 3, 1919, with the exception of the sum of £25,000 specially reserved to the vendors under the contract. As a result of the public subscription to the share capital in January last, the company issued 750,000 preference shares and 250,000 ordinary shares of £1 each, and these, with the shares allotted to the vendors before mentioned, and 3,500 ordinary shares taken up by the

Every Description of Banking Business.

directors for cash, represent the 1,000,000 preference and 1,000,000 ordinary shares shown in the balance-sheet in your hands.

PROFITS.

The result of the trading of all sections of the company's business has been satisfactory, and the profit earned amounts to £378,227. Owing to the fact that, under the contract of sale, profits earned during a past period were acquired, it has been necessary to make an apportionment. The profits attributable to the period from April 4, 1919, to January 12, 1920, have, therefore, been treated as capital profits, and, accordingly, the sum of £295,913 has been set aside and dealt with as follows:—Allocation to vendors before mentioned £25,000, and to a special reserve account £270,913, making a total of £295,913. The balance of the profits, namely, £82,313, has been retained in the profit and loss account, and after deduction of the reserve of £11,378, for preference dividend accrued to March 31, 1920, leaves a balance available for disposal of £70,935. You will see from the report that the directors have recommended that this balance should be appropriated as follows:—In payment of a participating dividend of 2½ per cent. per annum (less income-tax) on the preference shares for the period to March 31, 1920, making a total dividend of 10 per cent. per annum for the period, £3,792; in payment of a dividend of 10 per cent. per annum (less income-tax) on the ordinary shares for the period to March 31, 1920, £19,486; and to carry forward £47,656, making the total before mentioned of £70,935. With regard to the special reserve of £270,913 which has been created, I should mention that as the company's liability for excess profits duty has not yet been ascertained, it is not possible to allocate a specific sum for taxation. When the liability has been settled the directors propose to utilise the balance of this special reserve in writing off amounts from preliminary expenses and goodwill accounts.

MAGNITUDE OF THE BUSINESS.

I think it will be of interest if, on the occasion of this first annual meeting, I make reference to the three important concerns owned by the company. They are, as you know, Burberrys, H. J. Nicoll and Co., Limited, and S. and J. Prestwich. Burberrys, both by name and reputation, are known all over the civilised world. Their main centre of business in the Haymarket is one of the best-known establishments of its kind in London. While the Haymarket house is so familiar to the Londoner and to London's visitors, there are in Golden square, not far away from it, very fine warehouses and offices owned by Burberrys. Here two distinct and separate businesses are carried on.

I have referred to two principal houses of Burberrys, viz., the Haymarket and Golden square, both of which are very capacious and adequate establishments, but there is a third one in Paris, which is of the highest importance from the point of view of the magnitude of its business and of its capabilites of expansion. The acquisition of the mills, plant, and business of S. and J. Prestwich places Burberrys in the position of being able to make their own materials and to eliminate intermediaries. In addition to the goods they have made over many years for Burberrys, S. and J. Prestwich are large manufacturers of other cotton materials in demand by the home, colonial, and continental markets, and their name has a very high reputation for quality and design in all these extensive areas. A large amount of capital has been invested in the purchase of the shares of H. J. Nicoll and Co., Limited. The great advantage of the transaction lies in the acquisition of the spacious and splendidly situated premises in Regent street and at Cornhill, in Manchester, Liverpool, and Paris. I think we may feel in regard to the Burberry Company that the splendid organisation it possesses and the great scope it has for the development of its business must in the result meet with consistent prosperity.

The motion was carried unanimously, and the proceedings terminated.

GOODE, DURRANT, AND CO., LIMITED.

INCREASED PROFITS.

The twenty-second ordinary general meeting of Goode, Durrant and Co., Limited, was held, on the 28th instant, at the registered office of the company, 27 Milton street, London, Mr Albion J. Williams (vice-chairman) presiding.

The Chairman moved the adoption of the directors' report and audited balance-sheet for the year ended July 20, 1920, and congratulated the shareholders upon the excellent result obtained.

THE ACCOUNTS.

Referring to the accounts, he pointed out that the ordinary share capital had been increased by the issue of 65,706 shares, a considerable number of which were taken by the employees of the company. In conjunction with successful trading, this increase in capital, together with the large amounts placed to reserves, had resulted in considerably increased profit, amounting to £62,970 5s 8d, and it was proposed to deal with this as follows:—

To pay a dividend at the rate of 6½ per cent. per annum on the preference shares, including the interim dividend paid in April last, of £10,725; to pay a dividend at the rate of 10 per cent. per annum on the ordinary shares, including the interim dividend paid in April last, of £19,785; to place to the general reserve fund £20,000; to add to the balance of profit reserve account (making this account £40,000) the sum of £3,242 9s 7d.

He remarked that it would be remembered how some few years ago the Australian income-tax officials objected to the system of carrying forward profits, and, therefore, all balances were placed to a balance of profit reserve account; but this objection having been waived, it was proposed that the amount of £40,000 be transferred from the balance of profit reserve account to the general reserve fund, making the total reserve funds (exclusive of the balance of profit carried forward) £200,000.

SUPERANNUATION FUND.

The present had been deemed a suitable opportunity to create a superannuation fund for the benefit of employees of the company who, by reason of advancing years, or illhealth, were unable to carry on their duties, and it was proposed that the sum of £5,000 should be set aside to establish this fund.

Mr W. E. Pennick seconded the resolution, and pointed out that, although the stock had very largely increased in amount, to a very considerable extent this had been occasioned by goods being delivered early, and, consequently, the amount of stock in transit had been more than doubled. In like manner, this increased the amount of sundry creditors on open accounts.

It was unanimously resolved that the directors' report and the audited balance-sheet for the year ended July 20, 1920, the payment of dividends, together with the additions to reserve accounts, and the institution of a superannuation fund for employees be adopted.

Mr A. T. Wreford proposed the re-election of the retiring directors, Mr Albion J. Williams and Mr W. E. Pennick, who were thanked for their past services to the company and unanimously re-elected; and Messrs. Newman, Ogle, Son and Co. were reappointed auditors for the ensuing year.

Unanimous votes of thanks to the chairman and to the staffs in London and Australia concluded the proceedings.

RONEO, LIMITED.

PROSPEROUS YEAR—INCREASE OF CAPITAL.

The annual general meeting of the shareholders of Roneo, Limited, was held, on the 28th inst., at 4 Southampton row, London, the chairman (Mr W. T. Smedley) presiding.

The Chairman, in moving the adoption of the report, said that they had experienced another year of continued prosperity. The profits in 1918 were £53,569, in 1919 £73,050, and last year £101,020. The dividend had been raised from 15 per cent. in 1918 to 20 per cent. in 1919, and was now 25 per cent. These results had been obtained from the very large increases in the turnover. The sale of the Roneo Duplicator showed an increase over that of the previous year of 53 per cent., the sale of the Roneo Copier of 120 per cent., and the sale of the Roneotype of 260 per cent., and the same applied to all the accessories, while the number of packing cases had increased by 50 per cent. The profits and dividends were satisfactory, but they only represented one element in the progress of the company. During the year 61 acres of freehold land adjoining had been purchased and three new factories erected. A further £30,000 had been or would have to be spent before the works were complete. The first factory only came into hand in May, the second in August, and the new supplies works would be finished in about three weeks. The time had arrived when the expenditure would be productive and should therefore be provided for by capital. It was proposed to create at that meeting 125,000 additional ordinary shares of £1 each, which with the capital now existing would make a total of 359,650. These shares would be offered to the shareholders for subscription in due course.

The demands for the company's products continued steadily to increase, and with the largely improved facilities for their manufacture there was little doubt that the profits arising from the expenditure would far exceed the amount required to provide the dividend on the new issue. The export trade was developing with great rapidity. The sister company, the Compagnie du Roneo, of Paris, in which this company was largely interested, was enjoying at least equal prosperity. With great confidence the directors looked forward to the future, convinced that the prospects were all they could desire.

Mr E. Trevor L. Williams seconded the motion, and after some congratulatory remarks from the shareholders it was carried unanimously.

It was also unanimously agreed to increase the capital of the company to £450,000 by the creation of 125,000 additional ordinary shares of £1 each, the Chairman explaining that the price and terms of issue would remain at the discretion of the board, and had still to be finally settled.

TRANSVAAL AND RHODESIAN ESTATES, LIMITED.

MR HAMILTON AND THE COMPANY'S PROSPECTS.

The annual general meeting of the Transvaal and Rhodesian Estates, Limited, was held, on the 28th instant, at River Plate House, London, Mr F. H. Hamilton, the chairman, presiding.

The secretary (Mr H. J. Holt) having read the notice convening the meeting and the report of the auditors,

The Chairman said that with reference to the accounts, the expenditure showed a reduction which was distinctly satisfactory in these days of increased costs. The Fred Mine had again been their principal revenue producer. They had not had a recurrence of the devastating influenza epidemic of last year, but costs had shown an increase in nearly every direction, and there had at one time been some degree of labour trouble. In the circumstances, the results shown must be regarded as satisfactory. The grade of ore recovered showed an increase, but expressed in ounces and dwts the return was about the same as in the previous year. During the latter part of the year the glaring injustice of the fixed price of gold had been removed, and the difference in value between the results of the two years approximately represented the premium received. Development progress had been less satisfactory. Mr Denny, their consulting engineer, had come to certain provisional conclusions, and the directors had decided to send him out and to close down development work pending his arrival. His report had not yet come to hand. The present reserves were estimated at 55,000 tons of 14 dwt ore. That did not include the low-grade ore, much of which should become payable with improved methods of stoping, and provided the gold premium continued.

With regard to their interest in a chrome and asbestos property, it was expected that shipments of roughly graded asbestos would begin before the end of the year, but some development would have to be done before a mill could be erected. The chrome deposit appeared to be unique both in size and probably in grade. With regard to their interests in Nigeria, progress had been slow, and they had had a somewhat disappointing period with regard to output and prospecting. An arrangement had been concldued for transferring all their Nigerian interests to a new company, the Nigerian Base Metal Corporation, Limited. They might fairly hope that that company would play an important and prominent part in the development of Nigeria. They had arranged to transfer their Trinidad oil interests to the Globe Oilfields, Limited.

At the time when they were rendering financial assistance to the old Amalgamated Properties, this company had acquired an option on a portion of that company's interest in the Farm Maraisdrift on the Far Eastern Rand, adjoining the Sub-Nigel Mine. The directors proposed to exercise that option, and also to join in acquiring a further interest in the farm.

With regard to their land and estates, the demand for land in Rhodesia, very noticeable in the earlier portion of the year, had rather slackened in the latter part, but it still remained above the normal of previous years. One of their main assets was their holding of between 500 and 600 stands in Salisbury, about one-fifth of the available area in the town. It had been represented that their holding was valuable, but that a policy of inactivity might seriously depreciate it, and it was urged that by building at various points they would not only secure a revenue, but would largely increase the value of their surrounding property. They had already taken certain steps, but any really active policy was a matter for serious consideration.

On their ranches progress had been satisfactory.

PROSPECTS.

In conclusion, he wished to say a few words about the general position of the company and the policy which, in the view of the directors, the position imposed upon them. They had a large number of assets of undoubted value, which stood in their books at reasonable and, indeed, conservative figures. Their main revenue producer, however, was the Fred Mine, and quartz mines were apt to exhibit sudden variations. They had no reason to be disturbed by the position of the mine, but they could not regard it as a permanent source of income at the present stage of development. Their were two policies which might be followed. The first was that of distributing as dividends all profits as they were earned. Such dividends would necessarily be small, there could at present be no guarantee of their regular continuance, and they could only be paid by starving other assets and weakening the resources of the company. The alternative policy, which the directors were following, was that they should nurse the existing assets, look out for fresh sources of revenue, and endeavour to put the company's interests into a form which, when the market conditions improved, would enable them to find partners on favourable terms who would assist in their development. The board considered that that was the policy which the company ought to pursue, and that when confidence was restored it would be speedily justified. In one sense that policy was imposed upon them because it would be almost impossible to treat the company on small lines. Last year he defined their policy in similar terms, pointing out that having regard to the nature and extent of their interests it would eventually be desirable to provide the company with further working capital. The directors had prepared a scheme, but owing to market conditions it had been impossible to carry it into effect; it was merely postponed, however. It was not easy in times like the present, when confidence was disturbed and credit restricted all over the world, to realise that conditions did change, but it was certain that they would, and nowhere perhaps more rapidly than in Rhodesia. In the long run it was intrinsic value that counted.

Mr H. B. Jameson seconded the resolution, and it was adopted after some discussion.

The formal business was duly transacted, and a vote of thanks to the chairman for presiding concluded the proceedings.

NORTH ANANTAPUR GOLD MINES, LIMITED.

SEARCH FOR NEW PROPERTY.

The 13th ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 28th inst., at the offices of the company, 6 Queen street place, London, Mr V. Herbert Smith (chairman of the company) presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: During the year ending on June 30th last 9,000 tons of quartz and 9,900 tons of tailings were treated, the total production from the two processes being 14,118 ounces of fine gold, which was sold for £62,592. During the preceding 12 months 14,200 tons of quartz and 15,850 tons of tailings were dealt with, the total yield having been 11,690 ounces of fine gold, worth £49,569. The increase in the value of the gold produced in the year under review is, as explained in the directors' report, mainly attributable to a rich pocket of ore having been stoped in the 650 feet level. The improvement, however, is also due, to some extent, to the higher prices obtained for gold during the last two months of the financial year under the new arrangement made with the Indian Government.

It is a matter of regret to the directors that we have not succeeded in discovering any further body of payable ore, notwithstanding the fact that a considerable amount of exploratory work has been done during the last two or three years, and that the best expert advice was obtained. Having regard to the declining position of the North Anantapur Mine, and to the fact that several options over properties were brought to the notice of the company, your directors decided that it would be to the interests of all concerned to give careful consideration to any offer made, in the endeavour to secure some promising property towards which the company could turn its attention, as the financial position of the company permits of this course being taken. Shareholders have already been advised that an option has been obtained over the Baragunda copper property, situate in Chota Nagpur, North-East India, but they have therefore decided to await more information from India before proceeding further. I am pleased to be able to report that recently negotiations have been in progress, and these are nearly completed for the acquisition of an option over another copper property, also situate in Chota Nagpur. The prospects of this area are considered by your directors and managers to be of a distinctly favourable nature, and we look forward to success attending our efforts on this property. The block of land to which I refer adjoins a mine which has been extensively worked during recent years by a powerful English corporation, with the result, we understand, that a very considerable quantity of reserves of payable ore has been opened up there. I do not think I have anything further to add, and I therefore beg to propose that the report and accounts for the year ending June 30, 1920, be received and adopted. I will ask the Hon. Lionel Holland to second this resolution, but before putting it to the meeting I will call upon Mr Edgar Taylor to deal with the mining position.

The Hon. Lionel Holland seconded the motion, and it was carried, and the formal business was duly transacted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended October 27, 1920, the stock of coin and bullion showed an increase of £50,698 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Oct. 27, 1920.	Countries to which Exported.	Week Ended Oct. 27, 1920.
	£		£
Gold Coast	42,720	United States	7,441,993
British South Africa	1,560,424	Bombay, via other ports	56,650
British East Africa	45,677		
Straits Settlements	8,645		
Total value of imports of gold	1,657,466	Total declared value of exports registered in the week	7,498,643

Messrs Samuel Montagu and Co. write as follows on October 28th :—"Gold: The Bank of England gold reserve against its note issue is £121,678,765, a small increase of £680 as compared with last week. A moderate amount of gold came into the market this week and was taken for New York, with the exception of a very small portion for India. The Indian Coinage (Amendment) Bill, making the gold sovereign legal tender for 10 rupees instead of 15 rupees, was passed on September 8, 1920. Exactly a month later the Bombay Bazaar was willing to pay 16 rupees 10 annas per gold sovereign. The gold held by the Bank of England on account of the Federal Reserve Banks has been transferred recently to the United States. An estimate of the gold production of the United States, based on the output for the first six months of this year, indicates that the production for 1920 will be less than half the amount produced in 1915. In 1915 the British Empire produced 63.7 per cent. of the total world's gold output, and the United States 21.5 per cent. In 1919 the latter produced but 16.6 per cent., while the British Empire produced more than two-thirds. This year the contribution of the United States to the gold production of the world will probably be not more than 12 per cent. (about half of that which it contributed in 1915), while the stimulating effect of the exchange premium will probably increase the quota which the British Empire will contribute to 75 per cent. The Southern Rhodesian gold output for September, 1920, amounted to 45,471 fine ounces, as compared with 48,740 fine ounces for August, 1920, and 53,021 fine ounces for September, 1919. Silver: The tendency of the market has been still downward. Buyers have been shy to come forward, especially from China. A degree of steadiness in the Indian exchange suggested to Bazaar dealers the propriety of covering some of their bear commitments. As a consequence, a short-lived reaction took place on the 25th inst. to 52½d. Indian operators becoming quickly satisfied, however, the poor undertone re-asserted itself, and prices again commenced to drop. Continental sales have been rather free until the last day or so. Failing much in the way of supplies, the market has become dull and inactive. The *Harvard Economic Review* gives the United States silver production for 1919 as 46,070,000 ounces, against 56,510,000 ounces in 1918.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

NOTICES.

Barclays Bank, Limited, announce that their Old Broad street branch has been removed from No. 25B Old Broad street to new and larger premises at 23 Old Broad street, E.C. 2. They also announce that they will open, on Monday, November 1st, a branch at Queen's road, Clifton, Bristol, under the management of Mr J. Thomas.

The Co-operative Wholesale Society Bank is opening its first branch outside Manchester on November 1st. This will be at 99 Leman street, London, E. 1, with a sub-office at 14 Red Lion square, Holborn, London, W.C. 1.

VENTILATING THE STRONG ROOM

THE CHATWOOD AUTOMATIC AIR INLET
used exclusively in the ventilation of
THE CHATWOOD STRONG ROOMS

AN efficient ventilation system is one of the most important features in the scientific construction of the Strong Room. It is essential that the contents entrusted to its care be preserved in a dry and otherwise suitable atmosphere. It is, however, just as important that in case of fire the ventilator should automatically close to prevent the entry of flames

THE CHATWOOD AUTOMATIC VENTILATOR

illustrated above is not only simple and inexpensive, but is particularly effective. It consists of a cast iron box built into the masonry connected with the interior of the strong room by a syphon pipe. Inside the box and above the end of the pipe, an iron ball is suspended by means of a fusible hook which melts at an extremely low temperature, so that if fire occurs the ball automatically drops into the end of the pipe and the only passage into the strong room is effectively sealed

THE CHATWOOD STRONG ROOM

Reports and Notices.

In consequence of the resignation, through ill-health, of Sir Joseph Savory, Bart., from the governorship of the New River Company, Limited, Mr Arthur R. Prideaux, the deputy-governor, has been elected governor to fill the vacancy.

Messrs John Gibbs, Son, and Smith announce that on and after November 1st their address will be 6 Austin friars, E.C. 2, instead of 62 Old Broad street, E.C. 2.

Mr S. F. Prest has resigned his position as chairman of Eley Brothers, Limited, ammunition manufacturers, but will retain his seat on the board.

It is announced that Mr Albert Peech, of Firbeck Hall, Rotherham, has been appointed chairman of the United Steel Companies, Limited, in place of the late Mr Henry Steel, and that Mr Herbert Guedalla of 1 Broad street place, London, E.C. 2, has accepted the vacant seat on the board of that company.

GOVERNMENT STOCKS, &c.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the sixth fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1920.

BANKS.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK.—The report for the year ended June 30, 1920, states that the profits, after making provision for bad and doubtful debts and other contingencies, amount to £519,188, less expenses of management, £229,001, income and other taxes, £120,008, leaving £170,179, from which must be deducted

interim dividend of 5 per cent., free of tax, £26,972, resevre fund, £15,000. The directors propose to place to reserve a further £35,000, making £50,000 for the year, raising the fund to £635,000, pay a further dividend of 5 per cent., making 10 per cent. for the year, free of tax, place to officers' guarantee and provident fund £5,000, to the purchase and cancellation of deferred inscribed deposit stock £17,981, and to carry forward £94,209, including £50,954 brought in. The directors have confirmed the provisional agreement entered into with the London Bank of Australia for a fusion of interests.

RAILWAYS.

INTEROCEANIC RAILWAY OF MEXICO.—The report for the year ended June 30th last states that the property is still in the hands of the Mexican Government, and that the directors are without any definite information as to its present condition. No accounts have been received from Mexico. At June 30, 1919, there was a debt balance of £1,321,741, and interest on debenture stock, rental of leased lines, administration expenses, &c., have increased this to £1,613,771. In May proposals for an extension of the moratorium for a further period of two years were agreed to by all interests.

TEA AND RUBBER.

ANGLO-DUTCH PLANTATIONS OF JAVA.—The report for 1919 states that the profit amounts to £215,349, to which has to be added £58,311 brought forward, making a total of £273,661. The directors propose a final dividend at the rate of 12½ per cent., less tax, leaving £48,474 to be carried forward, subject to British and Java excess profit duties, if any. The 1919 extensions total 6,104 acres, all costs in connection therewith being incorporated in the accounts. The total expenditure on the estates and new clearings amounted to £312,033. Of this the capital account has borne £153,060, while revenue has been charged with £158,973. The value of the produce from the estates amounted to £324,639, which exceeded the total expenditure on the estates by £12,696, against an excess in 1917 and 1918 of £2,160 and £8,388. The negotiations in connection with the expropriation by the Netherlands Indies Government of a portion of the company's lands and of all its ownership rights were brought to a conclusion in December, 1919, when the sum of 17,000,000 fl, which had been agreed with the Government, was paid to the company. After writing off the expenses incurred in obtaining the award, including commissions, surveys and compensation to staff, the net amount is 16,512,146 fl. The board have transferred the proceeds of the appropriation to a capital reserve account, as well as £137,500 difference on exchange on the first remittance, and they have written £64,838 off underwriting and brokerages in connection with the original issue. After the inclusion of these items the capital reserve stands at £1,448,675, of which the directors propose to capitalise £643,390 and apply same to pay at par for the issue of new shares.

MISCELLANEOUS.

ANGLO SIAM CORPORATION.—The profit for the year ended March 31st last, after providing for all Government taxation, amounted to £109,052, and after placing £25,000 to reserve funds, £5,000 to income-tax reserve, and £2,500 to the staff provident fund, the directors recommend the payment of a final dividend of 12½ per cent., less income-tax, together with a bonus of 10 per cent., free of income-tax, on the ordinary shares, the same as last year. The sum of £58,312 is carried forward, but out of this amount it is proposed to capitalise £25,200.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to August 31st (new style, January 14th to September 13th, 1920:—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross receipts, August, 1920.....		6,506,630.27	4,362,540.20
Do do 1919.....		4,607,474.30	4,161,702.00
Estimated receipts for eight months (Law of Control)		19,266,666.67	7,133,333.33
Actual receipts for eight months, 1920		42,739,212.27	38,437,048.90
Actual receipts for eight months, 1919		31,039,047.75	30,830,505.30
Difference between estimated and actual receipts for eight months.....	1920	+ 23,472,545.60	+ 31,303,715.57
	1919	+ 11,772,381.08	+ 23,697,171.97

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49⅓ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. The receipts in gold from both naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par, the conversion is made at that average rate.

GUARANTY TRUST COMPANY OF NEW YORK.—The balance-sheet, dated September 30, 1920, shows total assets of $920,805,256.22, as compared with $907,169,457·62 on June 30, and deposits amounting to $692,560,285.60, as compared with $674,525,852.27 on June 30th.

CARLTON HOTEL.—The report for the year ended August 31, 1920, states that the profit, including interest, dividends, and transfer fees, and after providing for rent, rates, taxes, insurance, and all other expenses, amounted to £117,864. £59,578 was brought forward, making together £177,442, out of which have been paid or provided for: directors' fees, £2,300; interest on 4 per cent. debenture stock, £9,207; interest on 4½ per cent. debenture stock, £11,241; interest on 4½ per cent. "A" mortgage debentures, £10 696; interest on coupons for interest on 4½ per cent. "A" mortgage debentures, £703; dividend for the three years ended August 31, 1915, 1916, and 1917 on preference shares at 5½ per cent. per annum, £33,000; leaving available £110,243. The directors recommend the transfer to reserve for amortisation of leases of £4,812; dividend for the three years ended August 31, 1918, 1919, and 1920 on preference shares at 5½ per cent. per annum, £33,000; dividend for the year on ordinary shares at 10 per cent. per annum, £20,000; bonus on ordinary shares at 5 per cent., £10,000; transfer to general reserve, £30,000; leaving to be carried forward £12,431.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seasonable weather conditions have prevailed over the United Kingdom, and good progress was made with ploughing and sowing operations, also the ingathering of late crops in Northern districts. Offerings of native wheat were on a fair scale, and all desirable milling qualities were readily taken up at full maximum price of 95s per qr, 504 lbs, or 1s per qr more money delivered up; but inferior grades tended in buyers' favour. Imported descriptions moved off quietly at regulation prices. Crop reports from most exporting countries continue favourable, apart from India, where droughty conditions continue to prevail. Supplies of wheat and flour coming forward are quite adequate for requirements, and the future outlook is generally favourable. Flour.—There is a moderate demand for G.R. grades at 86s per sack, ex mill, with allocations of imported at 81s 9d to 93s, according to quality, per 280 lbs, ex store. Mill offals remain quiet at late rates. Maize quiet, and prices showed a further decline owing to recent liberal arrivals and shipments from the Argentine combined with a poor demand for feeding-stuffs generally. Plate, ex ship, quoted 61s 6d, and ditto landed 64s 6d per 480 lbs. On c.i.f. terms cargoes were more or less neglected and values weaker. A cargo of La Plata arrived, sold, 62s 6d. Parcels lower, and Plate, afloat, sold, 59s to 58s 3d; September-October, 58s 6d to 57s 6d; October-November, 58s 6d to 57s; November-December, 58s 9d to 57s 3d per 480 lbs. Barley.—Trade for imported descriptions proved very quiet, as home-grown is preferred by maltsters, even at higher prices ruling, while the lower grades for feeding purposes appear too high in value compared with maize. English malting useful to good rule at 90s to 100s, fine to choice 105s-110s, with grinding sorts ranging from 72s to 84s per 448 lbs. Californian, 90s to 102s, ex ship; American malting, 48 lbs, 67s 6d, ex ship; No. 4 Canada Western, ex ship, 68s; landed, 70s; Canadian feed, landed, 68s; Plate, landed, 70s; Danubian, ex ship, 67s 6d per 400 lbs. Morocco, landed, 79s 6d per 448 lbs. On c.i.f. terms only minor transactions occurred, including a cargo of Danubian-Bessarabian-Kustendji, on passage, at 64s, and parcels of standard Californian, October-November, at 86s 6d. Oats quiet, and imported descriptions again tended in buyers' favour. English whites, 60s to 64s; grey winter, 57s to 60s; and black, 57s to 62s. Plate, f.a.q., quoted 49s 6d, and clipped, 50s; Canadian, 60s 6d; and Norwegian, 64s to 65s, all landed per 320 lbs. In the forward market dealings were on a limited scale, and tendency easy. Plate, old crop, November-December, sold, 45s, and new January-February, 42s 6d; No. 2 Canada Western, October-November, 50s per 320 lbs. Beans quiet. English spring, 100s to 103s; new winter, 82s to 84s per 532 lbs. Peas slow of sale. English maples, 92s 6d to 105s; Dunns, 85s-87s 6d per 504 lbs. Split lentils, 42s to 46s per 112 lbs. Homeward grain freights ruled fully steady, and a fair number of charters were concluded. From the River Plate a number of steamers were taken prompt, and early November to U.K.-Continent at 95s up and 85s down river loading, and November-December at 93s 9d, while clipped oats from Bahia-Blanca paid 100s November-December. Tonnage was also taken for maize to North Spain at 97s 6d one and 100s two ports of discharge November. Business from

* Half-year. † Tax free. (a) Including arrears. (d) £25,200 of this sum is to be capitalised.
‡ Including amount brought forward from previous year. (e) Town Line (London).—Also a bonus of 100 per cent., free of income-tax, in the form of bonus shares.

Northern American ports was chiefly on Continental account, and 13s 6d per qr was conceded to Antwerp-Rotterdam, 16s 6d Mediterranean, and Gulf loading at 15s and 17s 6d respectively. India showed more activity, and tonnage was booked by the Wheat Commission at 77s 6d from Karachi November. Australia secured further tonnage at 150s for wheat January-March, with 117s 6d paid for sailers to U.K. with options. Danube grain firm, and several steamers chartered at 65s to 67s 6d U.K.-Continent and 50s paid Alexandria. Manchurian wheat steady at 115s U.K.-Continent. Time charter quiet and without new feature.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADE.

Our Sheffield correspondent writes:—There is good reason to anticipate that the strike in the coal trade will be at an end before the present report is printed, in which case most of the works which are standing will be able to resume operations on Monday. That will mean the loss of two weeks' output and turnover. As regards raw steel, the consequences will not be serious, as for some time past the output had been in excess of the rolling capacity of the country. The stoppage of so many rolling mills is a much more serious matter, as it will have produced a scarcity of finished material ready for subsequent manufacture. The competition of Continental iron and steel and steel goods is making considerable strides, as the state of the exchanges enables the foreign makers to undersell British material and to retain a good margin of profit for themselves. Belgium is now offering finished iron and steel at cut rates and in large quantities. Business with France and

Italy is in a poor state. Users there cannot afford to buy British goods. The coal trade has been at a complete standstill all this week, and big inroads have been made on reserve stocks, notwithstanding drastic efforts to economise. Stocks of house coal at depots are exhausted, and the reserves held by local authorities are being drawn upon. Generally speaking, the public have fairly good stocks, and no inconvenience is being experienced.

Our Glasgow correspondent (writing on Thursday) says:—Contrary to expectations, industrial operations in iron and steel relations are less stagnated than was understood. All the large steel-making establishments have shut down, and at the ironworks blast furnaces have been damped down. But a deal of activity still obtains at several of the large shipbuilding yards, engineering shops, at foundries, iron and steel bar-making works, and machine-construction shops. In these cases the managements have accumulated big quantities of coke, and draw for their heating and lighting needs on electricity producers, and so long as these sources hold good operations will proceed as usual, for, some experts affirm, fully a month to come. It stands, however, that, presuming coals are not liberated, business will gradually be restricted. It was calculated lately that Scotch ironmasters would make a reduction in their quotations for hematite and ordinary qualities in November, but this is now improbable, for the reason that their yard stocks are being completely cleared out by the demand in force from local consumers—those who are succeeding to pull along from the circumstances already explained. If it should come about that reserves are wholly wiped out, it follows that the restart will be seriously delayed, for it cannot take effect till the furnaces are again lit up and running at their normal. A healthy inquiry exists for bolts, nuts, and rivets for roofing steel sections (where they are in stock), and there is more doing in black sheets. Houses that deal in finished steel and iron manufactures are enjoying a good turnover, and are appreciably reducing their holdings, whilst in not a few instances were to the heavy side. On export account there is more doing in steel wire rope, which is wanted for the colonies, but shipments again depend on the bunkering of the steamers on the rota. There is no coal being allocated at the moment to tramps, and even the mail liners from the Clyde are poorly served. Deliveries of fuel to domestic consumers are much confined, but those concerned are not complaining of any great hardship so far.

Our Middlesbro' correspondent's report, dated October 28th, is as follows:—Pig-iron: A few blast furnaces are still running on fuel from stock, and as the local consumption of pig-iron has ceased owing to stoppage of steel works and foundries, there is now some pig-iron available for export. Prices have not been altered this week. Manufactured iron and steel: The coal strike has caused a complete stoppage of steel works and rolling mills, but engineering and commercial works will continue as long as possible. Steel ship plates, home, £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: Business is practically suspended. There are sellers of ore for forward delivery, but higher prices than 50s for best Rubio are now generally being asked.

BY-PRODUCTS TRADE.

(BY A CORRESPONDENT.)

TAR PRODUCTS.—The market has been badly upset by the coal strike, and prices are now more or less nominal. There is fair business in pitch at last quoted rates. Weakness has developed in refined naphthalene, which has fallen to £50. The crude is selling at from £15 to £23 per ton. Heavy naphtha is showing signs of weakness, and is worth 3s 3d to 3s 4d per gallon. Solvent naphtha is about 3s per gallon. There is an activity in cresylic acid, and dark 95/97 quality makes 4s, with pale 97/99 grade at 4s 6d per gallon. Carbolic acid crude 60's is 3s 3d per gallon, while crystals make 10d per lb. Creosote remains unchanged at 1s 3d per gallon. Benzol 90's is still 3s 10d, but pure is rather more plentiful at 4s 3d per gallon. There is little to report in intermediate products, but many manufacturers will be forced to close their works if the strike is prolonged beyond this week. Aniline oil and salts remain at 1s 9d and 2s per lb respectively. Salicylic acid (technical) is now down to 2s 3d per lb.

SULPHATE OF AMMONIA.—There is nothing fresh to report. Export prices now average about £35 per ton.

THE COTTON TRADE.

MANCHESTER, October 28.

The better feeling in the market referred to a week ago has been well maintained, and the turnover in yarn and cloth shows a distinct improvement. To-day the slump in raw cotton rates has rather checked progress, and there has been a little anxiety with regard to the hitch in the coal strike negotiations. A large inquiry has been met with in cloth for India, and a substantial trade done in light fabrics for Calcutta, with isolated sales in grey shirtings. China shippers have given very little support, and merchants are still hampered by fairly large deliveries of dear goods. An improved turnover has taken place in miscellaneous cloths for several near Eastern outlets. Home trade goods have also attracted increased attention. Some manufacturers are now firmer in quotation. A considerable turnover has been reported in American yarns, especially ring beams, and spinners have strengthened their position. Not much has been done in export numbers. A rather increased inquiry has come through in Egyptian yarns with moderate sales.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business during the week has been conducted on very restricted lines, and only small transactions have been made in order to cover immediate requirements. Most firms were working short time before the coal strike, but the limitation of supplies of fuel and the added inconvenience caused by a strike of carters resulted in the drastic curtailment of output. Now that the coal strike is settled, the outlook is naturally brighter, but the fact remains

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

Capital Paid Up	**Y45,000,000**
Reserve	**Y9,680,000**

Head Office - - TAIPEH, FORMOSA.

London Office - - 58 OLD BROAD ST., E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

that throughout the wool textile industry very little new business is coming to hand, and it will not be possible to run the machinery full time until there is a considerable improvement in the volume of new orders. Quotations to-day are merely nominal, but good average 64's tops may be quoted at around 5s, and 2-48's yarn out of this quality at about 9s 6d per lb. The piece trade remains stagnant and very heavy stocks have accumulated. The lack of confidence in this section of the trade is the most disquieting feature at present, inasmuch as no improvement can be expected in the other sections until the piece trade revives.

AUSTRALIAN WOOL SALES.

Messrs Dalgety and Co. have received the following cable from their Geelong branch, dated October 28th:—"Geelong wool sales: We have sold plains to 44½d. Fleece average 37d. Satisfactory demand for superior merino. Other sorts difficult to sell. Season outlook particularly good. Wheat crop looks splendid."

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

One cable has been received this week to the effect that the forthcoming spring and summer season throughout practically the whole of Australia is assured, the copious rains of the past month being sufficient to make feed and water sure for the ensuing summer months. The average woolman in this country has little conception of the enemies which Australian pastoralists have to face, for as well as the terrible rabbit pest, he has also incessantly to fight the maggot fly and dingoes, all of which are responsible for carrying off hundreds of thousands of sheep annually. However, I trust that the clouds of depression will soon lift from the colonial wool trade and the new clip be called for in a commendable way.

So far as one can judge from the cables received regarding the Sydney sales this week, prices in that market and in Melbourne last week have been every bit as good as pastoralists could expect, and certainly considerably above the level at which Bradford wants to operate. It appears again as if America will maintain her reputation for taking the cream of Australian wools at from 5 to 10 per cent. more money than Bradford and the Continent care to pay. It is not to be expected, so far as France is concerned, that any big orders will be sent out on speculative basis. There is a strong opinion that wool will not come much below to-day's rates, particularly in Continental types, but the fact that the franc is now at 54 to the £ is preventing French and Belgian buyers from taking a pound more wool than they actually need. Any recovery of the franc would be for them equivalent to a rise in the cost of wool they purchase now.

The Australian sales both in Brisbane and Melbourne have been postponed indefinitely, owing, no doubt, to the small amount of buying orders out there. Even though America is fairly keen for a few lots of good wool, there are not enough American orders to keep the sales going, and whenever much shabby wool is offered 50 per cent. or more of it is withdrawn owing to lack of competition. Up to the present Bradford has bought very little indeed in the colonies, likewise France and other Continental users. It is difficult to see how the big weights of wool available can all be taken unless credit is extended to Central Europe for her textile industries.

The outlook at the present time in Bradford is very depressing, though it must be admitted that trade is more handicapped by the local carters' strike than by the coal strike, most mills having sufficient coal to run for a week or two on the compulsorily restricted hours of 24 per week. The chief trouble is that owing to the strike of carters, no raw material can be moved into mills or finished goods out of them, and there is a limit to what warehouses will hold. One or two of the biggest firms of topmakers have the majority of their sorters out of work, and the compulsory reduction of hours in combing, spinning and weaving sheds is welcome because the raw material to hand will not allow of more time being worked, or because the weight of tops, yarns, and pieces in the makers' stockrooms is already bigger than is liked.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Linseed oil has made a good recovery, and on spot and near is £5 per ton on balance above the lowest recorded last week. Favourable prices had the effect of stimulating demand, and industrial consumers took full advantage of it, and values appreciated. Immediate requirements appear to have been filled. Oil for November delivery is sparingly offered. The position for January-April delivery is, however, not so well supported, as consumers are reluctant to make commitments far ahead in view of the unsettled industrial outlook. Generally speaking, however, the market has got over the recent shock, and is much steadier all round. A fair demand for technical cotton oil is reported, and crude Egyptian and common edible are slightly dearer on the week. Soya bean oil is largely nominal in the absence of supplies. Palm kernel oil has failed to maintain the recent improvement. Other oils are quiet, and show little or no activity.

Among oilseeds, linseed has been barely steady, dealings in Plate exhibiting, if anything, rather easier conditions and slightly lower values. Indian linseed, owing to transport and other difficulties at ports of shipment, has been dealt in only to a very small extent, and quotations are practically nominal. Cottonseed substantially advanced in value for Egyptian, but the appreciation has not been maintained. Palm kernels are again dearer as the result of steady buying in Liverpool.

A poor demand is reported for oilcakes of all descriptions. Stocks, however, are not large, and owing to the short time now being worked at the mills arising out of the coal strike, production is at a very low level.

THE TIMBER TRADE.

(FROM A CORRESPONDENT.)

With the exception of timber for the building trade, the demand for wood has been small during the past month, the troublesome industrial situation, culminating in the strike of the miners, precluding new work excepting that immediately required.

Prices for all constructional timbers continue to show a weakening tendency, accentuated after the large sales of timber held about the middle of the month. Many merchants think that it would be a wiser policy to hold small weekly or fortnightly auctions, instead of having such an accumulation of wood offered without reserve on three consecutive days in one month, as was experienced at Winchester House a few days ago, which has a bad effect on the spot demand many days before the sale takes place.

As a result of the above-mentioned sale, values for the more common quality North of Europe woods have become decidedly weaker, and for Canadian spruce the market is so depressed that one cannot understand why shipments are still reaching this country while stocks are so heavy and the docks so congested. In point of fact, stocks of North of Europe and Canadian softwoods in the country are cumbersome and unwieldy compared with the present poor demand, but with a general rise in the consumption (and this might be brought about by Government work for the unemployed, or a satisfactory settlement of labour unrest) there should not be too much wood to tide us over to next first open water; indeed, importers state that we shall be short of certain useful sizes before April.

The Finnish and Swedish f.o.b. markets, prompt, are quiet. Shippers are more approachable, and show a desire to clear their yards and realise quickly. Little business has been negotiated for next year's shipments from Sweden, but some purchases (considered bargains) have been made from Finland for cash. Importers have been blamed for their folly in so eagerly paying shippers' prices for this year's delivered stock, but they are exercising great caution regarding future operations, that building woods ought to be at least 1s a cubic foot cheaper next year. This could be more easily attained if the timber quays were kept clear and delays of shipping avoided throughout the season.

The furniture wood market is very dull, manufacturers being well stocked with goods for which they cannot find buyers at present prices. Mahogany logs and lumber of good and medium qualities are in fair demand at firm rates, but popular furniture woods, such as American satin walnut, oak, and whitewood, are not much in request at present. Cedar is not wanted.

The native wood trade is steady and prices are fairly well maintained for nearly all descriptions of good quality wood, and will remain so while foreign woods are so high in price. The collieries, however, prefer the dearer foreign pit-props; this is more parti-

cularly so in England than Scotland; the latter country evidently take much greater pains to satisfy their customers by providing them with the qualities and dimensions they require.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The depression caused by the coal strike has soon affected the hide trade, and all classes suffered a severe fall at the Bermondsey market on Thursday. Best ox fetched from 10d-10⅞d, a decline of 1½d-2d as against last week. Seconds fell almost as much, whilst cows were down to 9d, showing a drop of ⅝d-1½d. Calf showed little change, best being unchanged, except lights, which fell 1½d. Wools made from 4s 3d to 9s 8d, and hogs 3s-9s 8d each. Curiously enough there seems to be a better tone in foreign hides, and negotiations are on foot which will lead to big business when things settle down. Values are steadily approaching their intrinsic level, and tanners will feel more confidence in the position. Dry hides are selling fairly well, and transactions are reported in dry River Plates at less money. The American market is cabled as weak—one cable using the word "demoralised." Best native heavy packers are now offering at 22 cents, and dry Bogotas are unquotable.

The coal strike has badly affected business in leather, and Bermondsey has bourne rather a deserted aspect this week. No buyers have been in evidence, and even the offers of tanners leave merchants cold, in spite of the tempting reduction in price of best class sole leather. A few sales are reported of 12-14 lb bends, but offal is not wanted at any price. Rough dressing leather is also under a cloud, and with shoe manufacturers all working short time, the demand for upper stock is almost nil, except in exceptional cases, where a small lot is wanted for an order in hand.

Shoe manufacturers are carrying on to the best of their ability, but it is often difficult work to find employment for a few days a week for the regular hands. Unemployment is rife, and the trade union funds are suffering a severe strain.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 29.

A generally subdued tone was again apparent in most markets this week, demand being largely confined to pressing requirements as far as the home trade was concerned, while export inquiries do not extend for most commodities. Financial considerations continue to weigh, apart from labour unrest, so that operators have to face difficult times.

SUGAR.—Only a quiet trade was conducted in free parcels, and prices tended easier. Crystallised West India, as to sample, sold, 85s to 97s; muscovado, 63s to 75s; white Mauritius, 107s to 108s; Canadian and American granulated, 109s. American syrup very quiet, with business mainly confined to useful dark qualities at 35s, duty paid. Honey remains quietly steady.

COFFEE.—Spot inquiries were again generally restricted, and only small quantities change hands from time to time on export account. In auction, Nairobi formed the chief attraction, and sold steadily, other descriptions failing to meet with much patronage. Fair bold Nairobi sold, 89s 6d to 90s; Toro, 85s to 98s 6d. Of East India, bold C org sold, 109s. Future delivery, market firmer on dearer American advices and less pressure to sell by Brazilian houses. March sold, 57s to 54s 6d; May, 57s 6d to 54s.

COCOA in very poor support on about former terms.

TEA.—During the week 46,400 packages Indian and 23,000 packages Ceylon were brought to auction, and while all really fine qualities met a good market at full recent rates, common proved slow at easy values, and medium went off irregularly.

RICE remains a dull and featureless market. Business purely retail. Rangoon bran neglected at the moment. Beans and peas quiet steady.

SPICE.—Pepper steadily held though trade moved slowly. Fair black Singapore, spot, sold, 5¾d; ditto, October-December, steamer, 6d; Lampong, spot, 6¼d; Aleppy, 7d; Tellicherry, 7¼d; white Singapore, 1s 2½d; Muntok ditto, 1s 3¼d; ditto, October-December, 1s. Zanzibar cloves, spot, 1s 6d to 1s 7d; pimento, 4d; fair flake tapioca, 2d per lb; ditto, October-December, London, 20s; fair Penang seed, 24s on spot, and to arrive, 24s. Small sago, spot, 33s to 35s, as to sample. Sago flour, November-January, sold, 19s 6d to 20s 6d; farina, spot, 29s; November-January, 26s 6d. Desiccated coconut, fine cut, spot, 82s 6d; medium, 87s 6d; half-and-half, October-December, 74s.

JUTE.—A steady tone governed the market, but with buyers equally reserved, business moved quietly, while largely restricted to Continental requirements. Native first marks assortment, new crop, actuals, November-December, Italy, sold at £49 to £50; ditto, subs, usual ports, quoted, £45 10s; Daisee No. 2, £44 for actuals; lightning, actuals, November-December, £35 10s, sellers; and subs, £34, with D.S. diamond, D to E, spot, Hamburg, sold, £52. Calcutta hessians and also twills very quiet of sale, with quotations largely nominal. 10-ounce hessians, spot, 45s; and B twills, spot, sold, 100s to 95s.

HEMP steadily held this week, but demand remained slow. J grade, October-December, buyers, £65 10s; K, August-October, sellers, £56 10s; L, £55 10s. New Zealand slow. Fair quality, October-December, quoted £53. East India steady, quiet.

SHELLAC.—Market remained in a quiet state. Standard T.N., spot, 640s; December sold, 550s to 560s.

COPRA.—Market dearer, but attended by considerable irregularity. F.M.S Straits, November-January, London, sold, £57 to £58 and £57; ditto, to Rotterdam, £58, £58 15s to £58 5s; and afloat lots, £59; Ceylon, November-January, London, sold, £58 to £58 10s; South Sea Islands, November-January, Rotterdam, £57. Palm kernels dearer, and November-January sold, £37 to £38

EGG PRODUCTS.—Market quiet, and prices move against sellers. Old season liquid yolk, spot, sold, 85s; new, 90s per cwt. Albumen, spot, sold, 4s 8d per lb.

MENTHOL.—Spot, Kob-Suz, sold, 28s 6d; ditto, peppermint oil, 6s 3d; aniseed, 4s 10½d; slab camphor sold, 5s 10d; and China crude, 3s 4½d, all per lb. Japan wax, spot, sold, 115s per cwt.

FRUIT.—The market for currants is quiet, but sellers require steady prices. Pyrgos sold, 83s to 85s; Patras quoted 95s; Vostizza, 105s cases, and 100s in bags. Valencia raisins in auction received good support, and 90 tons found buyers at 1s to 3s advance, the finer descriptions showing the greater appreciation. Halves sold, 123s to 124s; quarters, 125s to 145s, with choice up to 165s. Sultanas sell slowly. Smyrna, old, 124s to 128s; new, 140s to 155s. Dates very difficult of sale, and rates are lower on the week. Hallowee, first tide, 46s; Khadrowie, 42s; Siar, 40s.

RUBBER.—Market very dull and depressed during the week, with a lack of confidence shown at the moment. Crepe, spot, sold down to 1s 3¾d; ditto, November, 1s 4d; December, 1s 4¼d; January-March, 1s 6d to 1s 5½d; sheet, spot, 1s 1⅜d; January-March, 1s 3½d.

OILS. — Linseed firm. Spot, net, naked, 71s; November-December, 68s. Rape firm. Crude, spot, 75s; refined barrels, 86s. Cotton firm. Crude Egyptian, 63s; Bombay, 53s; refined edible, 85s. China wood firm. Hankow, spot (barrels), 109s 6d; and Hong Kong, spot, 107s. Palm kernel quiet. Crushed, spot, 80s; extracted, 79s. Coconut firmer. Ceylon, spot, sold, 92s; September-November, 90s; Cochin, ditto, 92s 6d. Soya quiet. Oriental, afloat, 68s; October-December, 66s 6d; deodorised, 91s. Japan fish quiet. September-November (cases), 40s. Cod liver dull. English, spot, 44s. Groundnut quiet. English crushed, naked, spot, 80s; deodorised (barrels), 100s. Turpentine strong. American, spot, 130s; November-December, 131s; January-April, 134s. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum steady. American, spot, 2s 3¼d; and water white, 2s 4¼d per gallon.

OILSEEDS.—Linseed: market quiet and irregular. Calcutta, afloat, £36; October-November, £35 10s. Bombay, October-November, £36 10s. Plate, afloat, Hull, £33; October-November, £32; January-February, new crop, sold, £30 10s, £31, and £30 15s to £31 15s. Rapeseed firmer. Toria, September-October, sellers, £34 10s; real bold Ferozepore, £33 10s; brown Cawnpore, £30 10s. Cottonseed quiet, London. Egyptian, f.a.q., spot, London, sold £20; October-November, £18 10s. Bombay, spot, Hull, £13 10s; October-November, £13. Gingelly quiet. Chinese, November-January, to Continent, sellers, £42 10s. Groundnuts quiet. West African (in shells), afloat, £78.

METALS.—Tin continued active and firmer until the middle of the week, cash fluctuating to £261 10s, and three months to £265 10s.

An American Banking Connection

TO those interested in the development of trade with the United States and the establishment of permanent markets there, a banking connection will be valuable to the extent that its American service is efficient and comprehensive.

The Guaranty Trust Company of New York offers its facilities for complete international banking to firms of standing engaged in the American trade. Its financial service is based upon the unusual comprehensiveness of its organization in the United States and the knowledge of the needs of British industry and commerce which it has gained in the twenty-three years it has been established in Great Britain.

(*Continued from page* 805.)

The upward tendency made further progress at Thursday's meeting, cash being registered £263 to £265 10s; end of December, £263 10s to £266; three months, up to £267. At Friday's session increased firmness prevailed, cash being registered at £266 to £267 10s; early November, £266 to £268; three months, at £270 down to £268 10s, and since at £269 10s. English ingots £264 to £265. Copper: The standard market improved last Monday, a good business being done end of November, reaching £91, and three months £90 15s. Values eased until the middle of the week, while dealings were sustained, cash declining to £88 10s, three months to £88. There was less doing at Thursday's market, the tone being dearer. December dates sold at £88 15s to £89, and three months £88 15s. At Friday's session a more subdued tone prevailed, values being steady. Late December sold at £89, and three months £88 15s to £88 10s. Electros, £97 to £99, and best selected £96 to £98, strong. Lead firm at £36 5s to £36 15s. Spelter quiet at £39 to £39 15s. Antimony: Regulas, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Quicksilver quoted £16. Wire bars at £98 to £99.

TALLOW.—Messrs Colchesters and Woolner write as follows on October 27th:—The tallow market was quiet during the week, and prices were mostly unchanged. Best kinds are scarce and maintain their values, but for other sorts there is a slow demand and prices favour buyers. At auction to-day 1,996 casks tallow were offered, and 268 were sold. Quotations are:—Australian mutton: Fine, 76s; good to fair, 69s to 66s; dull to dark, 62s to 58s; hard, 69s. Australian beef: Fine, 84s; good to fair, 70s 6d to 66s; dull to dark, 60s 6d to 57s; sweet, 87s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 70s; and mixed, 43½, c.i.f., London, 67s. The market letter is unchanged. Town tallow, 60s per cwt. Rough fat per 8 lbs, 6½d to 1s 2½d; melted stuff, 46s per cwt. Quotations are:—Town: 58s net cash, naked, ex works. Country: Frail casks, 54s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 60s to 56s. Bone fat: White, none; pale, 57s; benzine, 51s; melted stuff, 52s, f.o.b.

DIVIDENDS GUARANTEED BY LENNARDS, LIMITED.

A Copy of this Prospectus has been filed with the Registrar of Joint Stock Companies. Application will be made in due course to the Committees of the London and Bristol Stock Exchanges for permission to deal in the Prefe ence Shares of the Company after Allotment.

The SUBSCRIPTION LIST will OPEN on November 1st, 1920, and will CLOSE on or before November 9th, 1920.

LENNARDS REAL PROPERTY COMPANY, LIMITED.

(Incorporated under the Companies Acts, 1908 to 1917.)

CAPITAL - - - - - - - £400,000

250,000 7½ p.c. CUMULATIVE PREFERENCE SHARES of £1 Each. 150,000 ORDINARY SHARES of £1 Each.

The Capital is covered by Freehold Properties. The Dividend of 7½ per cent. on the Cumulative Preference Shares is guaranteed by Lennards, Limited. The Security equals that of a Mortgage with the Dividend of a Preference Share guaranteed.

No Debentures or Mortgages can be issued without the consent of 75 per cent. of the Preference Shareholders who are present or represented at a meeting convened for the purpose. Lennards, Limited, take the whole of the Ordinary Shares in part payment of the purchase price.

The Preference Shares confer the right to a fixed Cumulative Preferential Dividend at the rate of 7½ per cent. per annum on the Capital for the time being paid up thereon. They rank in a winding up in priority to the Ordinary Shares, both as regards capital and as regards dividends accrued due thereon, but confer no further right to participate in profits or assets.

Issue of 250,000 7½ per Cent. Cumulative Preference Shares of £1 each at Par.

Payable as follows —2s. 6d. per Share on Application, 7s. 6d. per Share on Allotment, 10s. per Share 2 months after Allotment—£1.

Where desired the amount may be paid in full on allotment, and will carry dividend as from date of payment.

Dividends on the Shares are payable half-yearly—on the 1st January and the 1st July in each year, the first payment to be made on 1st January, 1921, and to be calculated from the dates of payment.

FERRERS M. DOUGALL, Lennards Real Property Co., Ltd., Queen's Road, Bristol.

PROSPECTUS.

The Company is formed for the purpose of purchasing from LENNARDS, LIMITED (the well-known Boot and Shoe Manufacturers and Retailers) FORTY VALUABLE FREEHOLD PROPERTIES, INCLUDING THE IMPOSING HEADQUARTERS AND WAREHOUSE AT BRISTOL AND THE FACTORY AT NORTHAMPTON. These premises will be let by the Company to Lennards, Limited, on a long repairing lease upon terms which will ensure to the Company an Annual Income of £30,000.

The Freehold premises which the Company will acquire have been valued by the old-established firm of Farebrother, Ellis, and Co., Land Agents, Auctioneers, and Valuers, of 29, Fleet Street, London (whose report and valuation are set out below), at the sum of £447,325. It will be seen that the security available for the Preference Shareholders will therefore be:—

For the £250,000 Preference Capital—Freehold Properties valued at £447,325.

For Preference Dividend (requiring £18,750)—An Assured Annual Income of £30,000, derived from Rent, and in addition the unconditional guarantee of Lennards, Limited.

The Freehold Premises and Shops will be let upon a repairing and insuring lease;

The risks of an ordinary Trading Company will not be incurred.

The income after paying the Preference Dividend may be used for Ordinary Share Dividend, or to purchase additional properties, or to create a Reserve Fund.

Lennards, Limited, the business of which was founded in 1877 by the present Chairman, Sir Thomas J. Lennard, has a paid-up Capital of £250,000. The Ordinary Shares of £1 each are officially quoted at 35s. to 36s.

Last Year's Net Profit amounted to £88,213.

The trade has increased every year without exception since its incorporation 23 years ago. It has now 180 business premises and shops in England and Wales, and "LENNARDS' WORLD-FAMED BOOTS AND SHOES" are a household word.

The figures for the present Year to date again surpass all former Records.

The continued development of the business necessitates the holding of larger stocks of greatly-increased value, and the acquisition of many desirable properties for the purposes of extending the business. Various options to purchase freehold properties, hitherto held on lease, have been exercised.

Lennards, Limited, have therefore agreed to sell to Lennards Real Property Company, Limited, the 40 Freehold Properties, set out in the Valuation below, for the sum of £250,000 in cash and 150,000 Ordinary Shares of the Company, and Lennards, Limited, will rent the premises from this Company at a total rent of £30,000 per annum, and will be responsible for all repairs and insurances. The Properties will be conveyed free from all Mortgages or other charges and subject only to five ground-rents amounting in all to £815 per annum.

The Articles of Association ensure that no Debentures shall be issued or Mortgages created without the consent of the Holders of at least three-fourths of the issued Preference Capital who are present or represented at a meeting convened for the purpose.

Lennards, Limited, have unconditionally guaranteed the payment of the Preference Dividend.

It will be seen, therefore, that as regards both Capital and Dividend the Shares now offered constitute a security of the very highest class.

VALUATION AND SCHEDULE OF 40 FREEHOLD PROPERTIES.

The following Report and Valuation of the 40 Freehold Properties has been made by FAREBROTHER, ELLIS and CO., the old-established firm of Land Agents, Auctioneers, and Valuers, of 29, Fleet Street, London:—

To the DIRECTORS of LENNARDS REAL PROPERTY COMPANY, LTD.

We understand your Company is acquiring the foregoing properties, which occupy extremely valuable trading positions in good business towns, and we value the same at the sum of Four hundred and forty-seven thousand, three hundred and twenty-five pounds—**£447,325 0s. 0d.**

Yours faithfully,
(Signed) FAREBROTHER, ELLIS and CO., Valuers, London.
Dated 18th October, 1920.

FINANCIAL POSITION OF LENNARDS, LIMITED.

(WHO GUARANTEE THE PREFERENCE DIVIDEND).

To the DIRECTORS of LENNARDS REAL PROPERTY COMPANY, LIMITED. 18th October, 1920.

Dear Sirs,—As Auditors of Lennards, Limited, we hereby certify that:—The average net profits of that Company for the last four years are sufficient to cover the Debenture Interest and dividends on all the Cumulative Preference Shares MORE THAN 5 TIMES, after making provision for Excess Profits Duty.

The Paid-up Capital is £250,000; the Debentures are only £50,000. The Reserve Funds now stand at £50,000.

The Dividend paid on the Ordinary Shares has not been less than 10 per cent. for the last seven years.

The Profits for the last 4 years (after adjustment, as shown by the published Balance-sheets) are as under:

		Net Profits. £	Carried Forward £
1916	Subject to Excess Profits Duty	48,470	20,112
1917	do. do.	53,858	27,265
1918	do. do.	86,724	35,673
1919	After deducting Estimated Excess Profits Duty.	88,213	45,876

The Balance-sheet of December 27th, 1919, showed (subject to the year's Excess Profits Duty) a surplus of Assets over Liabilities of £401,899 5s. 11d.—No amount is included for Goodwill.

The Founder's rights to a share of the Profits were purchased by the Company out of Revenue as from 28th December, 1918

Signed TRIBE, CLARKE and CO., Chartered Accountants, Albion Chambers, Small Street, Bristol, and at London, Swansea, Rochester.

The following particulars are given in compliance with Section 81 of the Companies (Consolidation) Act, 1908:—

The contents of the Memorandum of Association, with the names, descriptions and addresses of the signatories and the number of Shares

Continued on next page.

subscribed for by them respectively, are printed in the fold of the Prospectus and form part thereof.

The qualification of a Director is the holding of 500 Shares in the Company. Each of the Directors is entitled to be paid out of the funds of the Company by way of remuneration for his services at the rate of £100 per annum and such further sums as the Company in General Meeting may from time to time determine. The Directors are also entitled to be paid their travelling, hotel, and other expenses of attending and returning from Board and Committee Meetings. The minimum subscription on which the Directors may proceed to allotment is fixed by the Articles of Association at 250,000 Shares; the whole of the Shares now offered for subscription have been underwritten, and the Directors will proceed to allotment on the closing of the list.

Each Preference Share confers the right to one vote, each Ordinary Share to two votes.

Underwriting Contracts have been entered into:—Dated the 18th day of October, 1920, between the Company and Lennards, Limited, and (a) Sir Thomas Joseph Lennard; (b) Edwin Stanley Gange, M.P.; (c) Percy Steadman; (d) G. H. and A. M. Jay and Co.; (e) H. C. Woodcock and Co.; whereby each of the parties (a), (b), (c), (d), and (e), have underwritten 50,000 of the said Preference Shares for an underwriting commission of 5 per cent. Sir Thomas J. Lennard is the holder of 25,710 Ordinary Shares in Lennards, Limited, and Mr. Percy Steadman is the holder of 1,200 Ordinary Shares in that Company, and £5,000 in Debentures.

The preliminary expenses will be paid by Lennards, Limited, the promoters of the Company. No sum is payable to the promoters in respect of preliminary expenses or otherwise beyond the purchase consideration which the promoters will receive as Vendors of the properties to be acquired by the Company.

The following Contracts have been entered into by Lennards, Limited, for the purchase of certain freehold premises mentioned in such contracts:—(a) 30th September, 1920. Vendor, Joseph Wallis Goddard, of Leicester. Purchase money £56,000. (b) 2nd September, 1920. Three Contracts between Sidney William Dunston and Margaret Marion Dunston, both of 22, Tavistock Street, Devonport; Maurice Lamb, of Husbands Bosworth, Rugby; the Executors of Nehemiah Hamer, of 7, Norwich Street, East Dereham, Norfolk, respectively. Purchase moneys £3,000, £1,800, and £3,000 respectively.

At the request and on behalf of Lennards, Limited, Sir Thomas J. Lennard has entered into contracts as under for the purchase of freehold premises mentioned in such contracts: (1) 28th September, 1920. Vendor, Herbert Brand Sharman, of Weston Road, Northampton. Purchase money £3,750. (2) 1st September, 1920. Vendor, Albert Nicholas Cole, of Queen Anne's Battery, Coxside, Plymouth. Purchase money £6,000. (3) 3rd September, 1920. Vendor, George Hatton Buckman, of London Road, Dover. Purchase money £2.800. (4) 29th September, 1920. Vendor, Walter Wickenham Kemp, of Stokes Croft, Bristol. Purchase money £2,200. (5) 21st September, 1920. Vendor, Thomas Singlehurst, of the Crescent, Northampton. Purchase money £1,500.

Lennards, Limited, whose Registered Office is at 8, Bishop Street, Leicester, have entered into a contract dated 18th day of October, 1920, with the Company for the sale to the Company of all the 40 Freehold Properties set out in the foregoing valuation (including those comprised in the foregoing contracts) for the sum of £250,000 in cash and 150,000 Ordinary Shares in this Company credited as fully paid.

Copies of the Memorandum and Articles of Association, and copies of the above-mentioned Contracts, the guarantee of Lennards, Limited, the draft of the proposed lease by the Company to Lennards, Limited, and the Certificates of Messrs. Farebrother, Ellis and Co., and Tribe, Clarke and Co., may be inspected at the Registered Office of the Company, Bristol, between 10 a.m. and 1 p.m., and between 2 p.m. and 4 p.m. on the days during which the subscription list is open.

Application will be made, after allotment, for permission to deal in the Shares now being issued on the London and Bristol Stock Exchanges.

Application for Shares should be made on the accompanying form, and forwarded with the amount payable on application (2s. 6d. per Share) to the Company, or to any branch of Lloyds Bank, Ltd.

If no allotment is made the deposit will be returned in full. If allotment is made of a smaller number of Shares than those applied for, the balance of the application money will be devoted towards payment of the amount due on allotment, and any excess will be returned to the applicant.

Failure to pay any instalment when due will render previous payments liable to forfeiture.

Interest at 7½ per cent. per annum will be charged on instalments in arrear.

Prospectuses and Forms of Application may be obtained at the branches of Lloyds Bank, Ltd., at the Registered Office of the Company, or from the Company's Brokers, Solicitors, and Auditors, or any of the retail establishments of Lennards, Limited.

PREFERENTIAL CONSIDERATION IN ALLOTMENT WILL BE GIVEN TO APPLICATIONS FROM EMPLOYEES, SHAREHOLDERS OR CUSTOMERS OF LENNARDS, LIMITED, IF SO STATED ON APPLICATION.

A brokerage of 3d. per share will be paid in respect of allotments made upon applications (other than underwriting applications) bearing the stamp of Brokers or other authorised Agents.

Dated this 19th day of October, 1920.

FORM OF APPLICATION.

LENNARDS REAL PROPERTY COMPANY, LIMITED

Issue of 250,000 7½ per cent. Cumulative Preference Shares of £1 each at par (Dividend guaranteed by Lennards, Limited).

.....1920.

To the Directors of LENNARDS REAL PROPERTY COMPANY, LTD., QUEEN'S ROAD, BRISTOL.

Gentlemen,—I request you to allot me (insert number of Shares) ..... 7½ per cent. Cumulative Preference Shares of £1 each at par, upon the terms of the Prospectus dated 19th October, 1920, and the Memorandum and Articles of Association of the Company, and I agree to accept the same, or any smaller number of shares that may be allotted to me, and to pay the balance of 17s. 6d. per share in manner provided by the said prospectus, and request you to place my name on the Register of members for the shares allotted.

I enclose cheque value £ , being a deposit of 2s. 6d. for each share applied for.

In the event of my not receiving an allotment the above amount to be returned in full.

I hereby declare that this application is not made by or on behalf of an enemy subject within the meaning of the "Trading with the Enemy (Amendment) Act, 1916."

NAME (in full) .....
ADDRESS .....
.....
RANK, PROFESSION or BUSINESS .....
(If lady, please state whether Spinster, Wife or Widow.)
SIGNATURE .....

NOTE.—No receipts for deposits on application will be issued, but letters of allotment or regret will be posted with as little delay as possible.

This form, when duly filled up, should be sent with the deposit of 2s. 6d. per share to the Company's Bankers:—

LLOYDS BANK, LIMITED, QUEEN'S ROAD, CLIFTON, BRISTOL (or to the Head Office or other Branches); or to

LENNARDS REAL PROPERTY COMPANY, LTD., QUEEN'S ROAD, BRISTOL.

Cheques should be made payable to "LLOYDS BANK, LIMITED, or Bearer."

Cheques should be crossed, and any alteration from "Order" to "Bearer" initialled by the drawer.

THE CHINESE GOVERNMENT SEVEN PER CENT. PEKING - HANKOW RAILWAY REDEMPTION LOAN.

FIFTH AND FINAL DRAWING.

The following BOND CERTIFICATES issued by the London City and Midland Executor and Trustee Company, Limited, each representing 11 Bonds of $100 each (Pekin currency), of the above Loan, have been DRAWN for REDEMPTION at par (£99 per Bond Certificate), and will be PAID at the Head Office of the London Joint City and Midland Bank, Limited, 5 Threadneedle street, E.C. 2, on November 5th, when interest thereon will cease.

The Bond Certificates, which must be accompanied by all unmatured Coupons, should be left Three clear days before payment for examination at the Head Office of the London Joint City and Midland Bank, Limited, 5 Threadneedle street, E.C. 2, or any of its Branches.

NUMBERS DRAWN.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 0d; Yearly, £2 18s 0d. Colonies and Abroad, £3 1s 0d per Annum.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist," Granville House, Arundel street, Strand, London, W.C. 2.

Single Copies, ONE SHILLING.

Copies of the *Economist* may always be obtained in Paris: Messrs Galignani, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709), and *Journal of Commerce*, 32 Broadway.

THE MONEY MARKET.

MONEY was comfortably plentiful, and discount rates were steady, with no appreciable change in quotations. Two millions of Union of South Africa six months' Treasury bills, to be dated December 1st, were placed on Wednesday on a 7 per cent. basis, and subsequently changed hands at 6⅞ per cent. Some revival of business is looked for as the result of the end of the coal strike, but the majority against the acceptance of the terms is noted as an indication of a patched-up truce rather than real peace. Other adverse features in the outlook were failures in Liverpool and Bradford, the protest in Manchester against the cancellation of orders for cotton goods in America, the continued deadlock in the finance of British exports to Australia, the Bank of England's low reserve, and the problems involved by Government finance

in December, with War Loan interest to be met and about 25 millions of Exchequer bonds maturing, very few of which are expected to be converted into Treasury bonds.

* * * *

The Bank return showed a decrease of £53,000 in the stock of gold, an increase of £849,000 in the Note circulation, and a consequent decrease of £902,000 in Reserve, bringing its proportion to liabilities below 10 per cent. Government securities declined by £545,000, and Other by £2,191,000. There was thus a decrease of over 3½ millions in total deposits, Public being £1,722,000 higher, while Other declined by £5,421,000. The circulation of Currency Notes was £113,000 higher at £355,985,100, which includes £3,030,300 for notes called in but not yet cancelled. The fiduciary issue is £305,704,800, or £14,895,200 below the maximum.

* * * *

The Spanish bank rate was raised from 5 to 6 per cent. on November 4th. It stood at 5 per cent. since November 20, 1919.

* * * *

The following table shows Public Income and Expenditure for the week ended October 30, 1920: —

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	16·768	Supply Services	20·160
„ Borrowings	6,413	Interest on Debt	2·521
„ Exchequer Bank Balances	·352	Sundries	·852
	23·533		23·533

These operations increased debt by a sum of £6,412,462, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 8·680	Bank of England Advances	— 3·500
Treasury Bonds	+ ·140	Surrenders of Bonds, &c.	— ·198
Advances by Public Departs.	+ 2·600	Depreciation Fund	— 1·160
Sundries	+ ·150	National Savings Certificates	— ·300
	+ 11·570		— 5·158

Sales of National Savings Certificates amounted to £550,000, but this sum went out in payment of Certificates maturing, and under Section 59 (4) of the Finance Act, 1920, £300,000, being proceeds of National Savings Certificates, was allocated for housing. The floating debt was increased by £7,725,000.

* * * *

The foreign exchange market has been a faithful reflection of the general gloomy outlook. From 3.47 last Friday the movement of the dollar has been steadily against us, apart from a slight improvement at the beginning of the week, and was quoted yesterday at the extremely low figure of 3.42. With the weight of the cotton movement impending, although this may be smaller than in other years, and with the general monetary position in the States and the growing reluctance to finance foreign trade, little recovery can be expected for some time to come. Quotations for futures remain very little changed, being 1½ to 1¾ over spot for one month, 3½ to 4 for two months, and 4½ to 5½ for three months. In spite of various reports as to increased production and better prospects in France, the prospect of further inflation through heavy Government expenditure next year and the bad outlook for export luxury trades continue to prevent any improvement in the franc, which remains very sensitive to any extra demand. During the week the rate has risen rapidly from 54.28 on Friday last to 56.35 yesterday. As usual, the Belgian franc has moved in sympathy, being 53.10 yesterday, as compared with 51.35 a week ago. As will be seen, however, the spread between the two currencies has widened rather more rapidly than has been the case in recent weeks, and there are some slight indications of the Belgian franc being able to take up a more independent position. In the case of both currencies the spread between spot and future has narrowed, the difference for Paris being 18 to 23 centimes per month, and for Brussels 23 to 28 centimes per month below. After some irregular movements the mark has ended the week at 278, much weaker than on Friday last, in spite of rumours that the large surplus of German pre-war property in the United States may be returned to the German Government. The quotation for futures is par to ½ per month below spot. The supposed movement of German funds from Holland to London in consequence of the recent action of the British Government with reference to German post-war property has not been able to keep the florin up to its recent high quotation, the rate having sunk during the last seven days from 11.39 to 11.32 yesterday. For futures the quotation is par to ½ per month below spot. The débâcle in the lira steadily continues, yesterday's quotation being 97, as compared with 92.50 a week before, nor are there any signs of an improvement. Madrid has moved very slightly in our favour. Geneva remained much the same after going somewhat against us. There is also very little change in the Scandinavian currencies. Both Vienna and Warsaw are considerably higher and the Prague rate has also moved up from about 300 to about 312. The silver market has been rather firmer during the past week, owing to some revival of demand from India, but the demand has been easily satisfied without any considerable rise in price. At 1s 8¼d the rupee was nearly ¾d higher, and both Hong Kong and Shanghai were each 1d firmer. Rio has moved up to 12¾, but Valparaiso has reacted slightly.

EVENTS OF THE WEEK.

November 1st.—Municipal elections. Stock Exchange holiday. President of Board of Trade on British dyes.

November 2nd.—Miners' ballot on Government offer. U.S. Election. House of Lords' debate on reprisals in Ireland.

November 3rd.—Miners' ballot shows majority of 8,459 against Government offer. Coal strike ended. Election of Mr Harding as U.S. President announced. Result of first local veto polls in Scotland published. Commons' debate on Agriculture Bill and on reprisals in Ireland.

November 4th.—Spanish bank rate raised to 6 per cent. Debate on housing clauses of Ministry of Health Bill.

THE REPUBLICAN TRIUMPH.

We must go back to the War of Secession and to the reconstruction period that followed it to find a more complete defeat of a Democratic candidate for the Presidency than that suffered by Governor Cox. A few weeks ago the Presidential contest was described as "the mildest in history" by an observer in the Middle West. The eleventh-hour efforts made by the Democrats and countered by the Republicans have altered its aspect, but the final, and occasionally discreditable, efforts of both parties have made the defeat more crushing. Yet it might have been even heavier. The "solid South," indeed, is not quite unbroken, but the Democrats have held Kentucky against a vigorous onslaught, and carried West Virginia. But the whole East, including Boston and New York City, normally Democratic strongholds, has gone solid for Harding, and also what was less likely, the whole Middle West, including the usually Democratic city of Chicago, Indiana, Governor Cox's own State of Ohio, and even his own town. These last losses were doubtless due in part to resentment against the silly "campaign lie" that Mr Harding was partly of negro blood. West of the Mississippi the Republicans gain some Congressional seats in Texas, and have certainly carried Oklahoma, Washington, and California, which helped to turn the scale for Wilson four years ago.

Of course, the defeat is due mainly to the discomfort set up by the after-effects of the war and to resentment at President Wilson's policy and attitude. No President since Lincoln at the outset of his career, or Johnson just before his impeachment, has been so passionately hated or had such powerful opponents—at first because he maintained neutrality, then because he departed from Constitutional usage and seemed to claim autocratic power. His success in 1915 was largely due to the gratitude of the Far West to him for keeping his country out of the war, and his failure at the Peace Conference has estranged the Radical and pacifist voters, who had formed no small part of the Democratic strength. Eight years of Democratic rule had divided the party and set up a desire for a change of administration. And the Bosses on both sides had determined not to have a President personally strong enough to take his own line. As has often happened, the conspicuous candidates had been unable to unite their respective parties, and the way had been cleared in each Convention for a "dark horse" likely to be easily broken in. The result is a President-Elect who has given no signs of rising above mediocrity, and whose political creed has shown itself elastic. His personal character is high, his public record honourable, and office, as with Garfield, Cleveland, and Lincoln, may develop his powers and his independence. But at present he stands for obedience to "big business," for higher Protection, with discrimination against foreign shipping in United States ports and in the Panama Canal—even at the cost of a breach of Treaty obligations, as interpreted by the British Foreign Office; for something more than hegemony in Mexico and Central America, and for avoidance, as far as possible, of participation in the affairs of the struggling Old World. Fortunately, the complete and literal realisation of the extreme Republican programme of economic and political isolation from Europe is impossible, and Mr Harding's declarations during the contest imply considerable concessions to the Internationalists of his own party. Since his election he has declared that "there need be no apprehension that the United States will not enter into a league or association of nations," so that, while the form of the League and its procedure may be rejected, the United States may still consent to help it on occasion to achieve its ends. And the Democratic minority in the Senate, though smaller than was expected, will still be fairly strong.

But on the whole there is an unreality about the contest as a conflict of political principle. On domestic and labour questions there are wider differences within each party than between certain Democratic and certain Republican views. A few Republicans even support the League of Nations; many more, with many highly-educated mugwumps, chiefly women voters, have had to be conciliated by Mr Harding's declaration in favour of a combination of "all that is good" in the League and in the Hague Tribunal; others, in the Far West chiefly, follow Senators Borah and Johnson in condemning in advance any participation at all in European complications, and many "Radicals," mostly Democratic, regard the League as a dangerous instrument of "Capitalism." The two parties, in fact, are kept together by their "machines," and the discontent with both is shown by the formation of the Farmer-Labour party—which, however, has not even carried Wisconsin, its birthplace—and by the quadrupling since 1916 of the Socialist vote. As we have said, the aims, avowed and suspected, of the Republican managers cannot be achieved in full. Anxiety may legitimately be felt in regard to coming labour troubles, in view of the conservatism of the great financiers and employers, far surpassing that of the corresponding classes in Europe. But these are mainly the affair of the State Governments. Mexico, again, is on her very best behaviour, and so—except Honduras—are the Central American States. The ultra-Republican ideal of economic self-sufficiency is impracticable, and it will take more than the Jones Shipping Bill and the "Hapag" Agreement to render American competition effective with the European and Japanese mercantile marine. And we may be confident that the American people, which, during the past six years, has kept a large part of the population of Europe alive and has rendered splendid service to the defenders of popular liberties, will not be found wanting at any great crisis in the future remaking of a distracted Old World.

OUR INDEX NUMBER.

Wholesale prices at the end of October show a large decline as compared with the previous month, our Index Number recording a drop of no less than 470 points. This brings it down to 7175, only 16 per cent. above the figure recorded at the time of the Armistice, and the lowest since the end of November, 1919. As will be seen from our usual table below, had it not been for a sharp rise in the cereals and meat group, the decline during October would have been still more pronounced :—

It will be seen that the bulk of the decline is due to the textile group, but that the miscellaneous section and secondary food products have also contributed, while primary foodstuffs have risen to the highest point yet reached. Minerals are also higher than they have yet been. The part played by the various groups in wholesale price movements since the time of the Armistice may be more clearly seen in the table below, in which prices at the end of November, 1918, are taken as 100 :—

	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Total.
End Nov., 1918	100	100	100	100	100	100
„ Sept., 1919	108	104	107	116	97	106
„ Dec., 1919	112	113	132	126	104	118
„ Mar., 1920	117	116	161	138	123	134
„ Aug., 1920	111	118	136	144	112	124
„ Sept., 1920	117	119	128	145	110	123
„ Oct., 1920	121	115	104	145	104	116

The increase in cereals and meat is largely due to an increase of 22s 6d per quarter in imported wheat, new official prices for which came into force on October 18th. Barley is also considerably higher, but oats have fallen. There was a slight increase in beef, and a slightly larger one in mutton, but pork fell a little. In the second group, both tea and coffee are again lower, but butter was a shade higher.

In the textile section, all commodities, with the exception of silk, which has remained stationary, are lower. Cotton prices fell heavily during the first three weeks of the month, but towards the close the decline was checked, and a sensible recovery took place. On balance, however, quotations are much below those at the end of September, not only for raw cotton, but for cotton yarn and cloth. The crop reports of the U.S. Government and the figures of cotton ginned were responsible for the fall in raw cotton prices. As regards piece goods, Messrs Robert Barbour write in their monthly report :—

> So far as India is concerned congestion at the ports of entry is bad enough, but speculation in exchange has been the besetting evil and the biggest factor in the troubles that have arisen. Failure to cover their commitments at the time of purchase has led many dealers to delay payment of drafts pending a hoped-for recovery in the exchange rate of the rupee, a policy wholly immoral, and one which if prolonged is likely to render the position of merchants on this side well-nigh intolerable. Transactions in light fabrics, especially dhooties, have been freely mentioned for Calcutta, but Bombay and Karachi, both of them centres for the North-West districts, where a scanty monsoon gives additional cause for anxiety, have not up to the present shown any inclination to move. China is more or less a dead letter, and demand from Java, Singapore, South America, and the Near East is not nearly sufficient as yet to make any real impression.

The woollen trade remains quiet, and prices continue to give way. Flax, which has been unchanged since the end of June, has fallen sharply, and hemp and jute are also lower.

In the minerals section, the only movement of note is an advance of £2 15s in the price of lead, iron and steel prices being unchanged, while tin and copper were slightly lower. In the miscellaneous group there are no upward movements, and several fairly substantial declines, petroleum and timber leading the way. Rubber breaks a new low record.

IMPORTS FROM GERMANY.

A volley of questions fired at the President of the Board of Trade in the House of Commons on Monday suggests that some British manufacturers have already allowed themselves to become alarmed at the resumption of German exports of manufactured goods into this country. Sir Robert Horne has satisfied the curiosity of a questioner by giving quantity and value figures of the imports of German manufactured articles into the United Kingdom in the first nine months of 1920. These figures we reproduce below, adding, where identity of classification makes this possible, comparable figures for the last full pre-war year, 1913. The comparison will be found to be instructive :—

Imports of Manufactured Articles from Germany.

Import List Description.	Sir R. Horne's Figures for January to September, 1920.			Full Year, 1913.	
	Unit of Quantity.	Quantity.	Value.	Quantity.	Value.
			£		£
Glassware : Domestic and fancy ..	Cwt.	69,983	386,139	..	..
Bottles and jars.....	„	158,844	235,136	..	..
Iron wire	Ton.	6,375	273,001	36,927	367,616
Hollow-ware of iron and steel, enamelled.....	„	1,860	182,682	..	..

Toys and games, not of rubber or leather	..	..	934,830	..	1,183,703
Other goods	..	..	8,090,755	..	..
Total imports of manufactured articles	..	..	17,190,793	..	56143322*

* Total value of imports from Germany in 1913 of articles wholly or mainly manufactured, as given in the Annual Statement of Trade.

On the basis of Sir Robert Horne's figures, it may be expected that our imports of "manufactured" goods from Germany for the full year 1920 may perhaps reach a value of £25,000,000, or less than half that recorded in 1913. When the enormous rise in values is considered, it would appear that the nerves of manufacturers who are frightened by these figures must be in a very delicate condition. In almost every case where a quantity comparison is possible in the above list the imports from Germany have an immense leeway to make up before they can approach the pre-war level. A curious point is that Germany is sending us a larger number of musical instruments, but the value is far lower—which suggests that Germany is now sending us mouth-organs where she formerly sent pianos. Let us not be scared into Protection by the menace of mouth-organs or musical-boxes. At the first signs of reviving competition manufacturers, who have waxed fat behind the artificial wall created by war circumstances, are crying out for protection against competitors. The Government is being urged to produce its "Anti-Dumping" legislation. But it is clear from Sir Robert Horne's words that it is not simply an "Anti-Dumping" Bill, but protective duties that are being demanded of him. Referring to representations "of a very wide character" which he had received, Sir Robert said : "I find there are prevailing misapprehensions with regard to these matters. Many people seem to regard dumping as selling in this country at prices lower than the home price, but that is quite an erroneous idea. Many people in the representations I have received suggest anti-dumping legislation for matters which anti-dumping legislation would not relieve."

Several Parliamentary questions on the same day dealt with dye imports, and Sir Robert replied that the dye industry must wait and be dealt with at the same time as other "key" industries. It will be seen from the above table that the dye imports from Germany which are causing so much alarm are very insignificant compared

with pre-war figures, and of what came in a proportion were sent under the Reparations Clause of the Peace Treaty. But the Government have taken a lead in establishing a dye industry in this country, and have promised to safeguard it. This raises in an acute form a problem which protectionist manufacturers would do well to ponder. How is Germany to pay the reparations and indemnities demanded of her if her creditors are going to shut out or discourage German exports? The only way in which Germany can pay her debts is by production and export. If we are going to put obstacles in the way of her exports and prevent German manufacturers from taking advantage of opportunities accorded by the exchange position, we may as well give up all expectation of the fulfilment of reparation and indemnity clauses. Moreover, the dye question has a vital bearing upon the future of the great textile industry. Reports from users of British dyes are most unsatisfactory. Lancashire's foreign competitors will no doubt resume their use of German dyes. As our Manchester correspondent points out in a Business Note in this issue, colour users in this country are anxious about restrictions of supplies of foreign dyes. It would surely be the gravest folly to jeopardise one of our greatest export industries by condemning it to the use of inferior materials. To take a wider view, it is deplorable that, at a moment when the financial and economic experts of the world have declared at Brussels that the freest possible commercial intercourse between nations is one of the conditions of economic recovery, the first breath of competition should set British manufacturers whining for the erection of artificial barriers. However, the howl for Protection is unlikely to awaken much of an echo in the country, for the consumer, after his hard experience of the last few years, is very ready to welcome a return towards the normal working of the laws of supply and demand. Nor, with swollen industrial profits of recent years in his memory, is he likely to respond sympathetically to the manufacturers' plea for coddling and spoon-feeding.

A CASTLE IN THE AIR.

A VERY queer story has been disclosed recently by the directors of the Aircraft Manufacturing Company, that huge concern whose factories extend along the Edgware road at Hendon with such an impressive air of solidity and wealth. The central point of the story is that the company's business has collapsed, and that although it owes nearly half-a-million for income-tax and excess profits duty (a curious sidelight this on the official estimate of revenue arrears), it must be wound up either at once by foreclosure or in a few years' time after a friendly liquidation of assets. Foreclosure, it appears, is inevitable unless the note and shareholders subscribe fresh capital; friendly liquidation is possible only if they subscribe fresh capital in sufficient quantities. So far as we can understand them the events that led up to this disaster are roughly as follows :—

In the early days of aviation a very capable, energetic and ambitious man of business—Mr J. Holt Thomas—turned his attention to the manufacture of aeroplanes and the finance of flying. Starting in a very small way, he was fortunate in securing the help of a brilliant designer—Mr De Haviland—whose initials gave the name to the very famous and successful aeroplanes known as the D.H. The Aircraft Manufacturing Company, which Mr Thomas started, was among the very few concerns that appeared before the war to be well established and competently managed in the making of aeroplanes. When the war came, and the importance of air fighting was realised, much of the burden of supply fell on to the company, which increased its output enormously and extended its activities in many new directions. Subsidiary companies were bought up and presumably financed; new enterprises were encouraged, and the Aircraft Manufacturing Company became not merely a great industrial concern, but the financial centre of a network of outside companies numbering altogether about a dozen. Orders, of course, fell in showers; profits were enormous, and special facilities were granted by the Government for the development and extension of the business. Close relations were maintained with the Air Board, and at least two former servants of the Board were given directorships at salaries which appeared to be not inadequate to the work performed.

With the close of hostilities the fructifying shower of orders naturally came to an end; outstanding war orders were cancelled by the Government, and the company was left with a clear field for the development of commercial aviation, but with very large fixed charges and an expensive managerial staff to be kept paid and satisfied. A spirited attempt was made through subsidiary companies to induce the public to travel by aeroplane, but apart from a few enthusiasts and a few politicians, who thought that a well-advertised trip to Paris added to the public's belief in their standing and importance, we may doubt whether air travel has become popular enough to be a really paying proposition to the carriers. To keep the works employed the company started making motor-car bodies, but it is not easy to switch your workmen over from one kind of work to another at a moment's notice, and it appears from a recent statement that this particular enterprise was not exactly remunerative.

So at the beginning of this year the position was that subsidiary companies were for the most part a hindrance rather than a help; that the profit-earning powers of the Aircraft Manufacturing Company had come to a close, and that the capital stood at the following figures :—

£250,000 7 per cent. notes.
£100,000 first preference.
£250,000 second preference.
£50,000 pref. ordinary (no public issue).
£2,500 def. ordinary (no public issue).

In these circumstances Mr Holt Thomas and the other holders of ordinary shares made with the directors of the B.S.A. what is believed to have been an extraordinarily good bargain by selling to the Birmingham Small Arms Company all the ordinary shares in the company and taking payment in B.S.A. shares. It is probable that Mr Thomas and his fellow shareholders understood the value of what they sold far better than the B.S.A. realised the value of what they bought, for it was not long before the B.S.A. were guaranteeing a bank loan of £660,000, secured on the "usual bank debentures." Things, in fact, seem to have gone from bad to worse, and within a few months of Mr Thomas's successful clearance it became a question simply of how the business could be wound up with the least loss to all who were still interested, and to-day the noteholders and shareholders are faced with the alternatives of—

(1) Allowing the affairs to be liquidated at once; or

(2) Of leasing their factories to the Daimler for five years with the option of purchase, and subscribing for debentures, which will relieve the B.S.A. of half its guarantee to the bank.

What course they will adopt we do not know, but although Mr Szarvasy blames the Government for its neglect of commercial aviation, there are certain questions that both the shareholders of the Aircraft and the shareholders of the B.S.A. are clearly entitled to ask. B.S.A. shareholders will naturally want to know from their directors why in the spring of this year they made a bargain which by the summer had proved to be so bad, and what precautions were taken to value the business and the contracts in hand. On the other hand, the Aircraft note and shareholders may well ask : —

(1) Were any steps taken to safeguard their interests when the ordinary shareholders sold out *en masse* in the spring?

(2) Was the business before and after the Armistice run with a due regard to economy?

(3) What were the subsidiary undertakings in which their money was invested, how much was invested in each of them, and what is their position to-day?

(4) What was the salary paid to the new directors brought in in the later stages of the war, and what special services did they render in return for them?

(5) What is the position of Mr De Haviland, and are any directors or ex-directors of the Aircraft Manufacturing Company still associated with him?

(6) A complete list of the preferred and deferred ordinary shareholders who sold out to the B.S.A.

(7) What consideration did they receive for the sale of their shares to the B.S.A., and what knowledge had

the directors of the Airco of the sale while it was being arranged?

At the recent private meeting of note and shareholders Mr Holt Thomas was not present owing to ill-health. This was unfortunate. In view of the intimate relation of Mr Thomas to the business, and of the faith in his capacity which doubtless influenced investors in favour of the company's securities, a full statement should, we think, be made on his behalf, and the shareholders are entitled to demand it.

But the real mystery will remain unsolved until we know why the B.S.A. decided to buy Mr Thomas out.

TAXATION IN FRANCE AND GERMANY.

We have received the following statement from a German correspondent :—

Amongst its multifarious duties the Reparation Commission has to satisfy itself "that in general the German scheme of taxation is fully as heavy proportionately as that of any of the Powers represented on the Commission." So far it has not achieved this task. But the League of Nations has prepared for the Brussels Conference a comparative analysis of the burden of taxation and of the national debt borne by the Principal Powers. It has approached the difficult problem of comparing the budgets of different States with a great deal of circumspection. It has avoided hasty conclusions. But its purely academic statements have given rise to a discussion, as some distinguished Frenchmen have tried to establish the claim that the financial burden of victorious France is far heavier than that of defeated Germany. These assertions have gained some support from the German figures collected by the League, which were fairly correct some time ago, but are hopelessly out of date to-day.

Moreover, in one respect the French claims are well founded. According to the estimates the French debt is 234 billion francs, and the German debt, not including the States, was about 251 billion marks. The per capita debt of France would thus be 6,158 francs and the per capita debt of Germany 4,183 marks (not 3,346.92 marks as stated in the Report). As Germany has no foreign debt, whilst France has a foreign debt of about 34 billion francs, the situation of France appears less favourable than that of Germany.

This is a purely transitory state of affairs. Germany has to pay 20 billion marks gold up to May 1st, which is equivalent to the paying off of a foreign debt of that amount. Moreover, there is no possibility just now of providing for the German deficit but by piling up new debts. And as there is no possibility of issuing a funded loan the floating debt must be increased; even to-day only 36.3 per cent. of the German debt is funded debt, against 52.1 per cent. in France. By the end of the budgetary year the total German debt, including all maturing obligations, will probably be near 320 billion marks, or 5,730 marks per head.

The total of French expenditure is estimated in the Brussels report fairly accurately at 49 billion francs, the German expenditure at 52 billion marks. Unfortunately this latter figure has been surpassed long ago. The Estimates—which, owing to unexpected demands, are being raised almost daily—look forward to a total expenditure of 117 billion marks. The total income (including gross revenue from the railways) is 61 billion marks, and the total deficit 56 billion marks. After deducting about 19 billion marks gross income from post and railways (their total expenditure is 37.7 billion marks), a total revenue of 97.9 billions has to be provided for. Of this, only 42 billions are expected from taxation and other real sources of income; 56 billions must be borrowed.

This unfavourable state of affairs is not a complete picture of German finance. Germany is a Federal Commonwealth. Though the States have been shorn of some of their former splendour, they still play an important part in national life. They get about 9½ billion marks from the proceeds of taxes collected by the Reich; they have to share this grant with the municipalities. The total expenditure of the Reich (less such expenses of the railways, &c., as are covered by their own revenue) is 97.9 billion marks. After deducting the grant of 9.4 billion marks, there remains an expenditure proper of the Reich of 88.5 billion marks. The estimated expenditure of the States is at least 16 billion marks. So the total expenditure of Reich and States combined is nearly 105 billion marks, or more than double the figure mentioned in the Brussels report. Whilst the expense of the Government in France is 1,287 francs per head, the German equivalent for the Reich only is 1,476 marks. If the States were included, it would be 1,750 marks, not 892 marks as stated in the report.

The total German revenue expected from taxes is 37.7 billion marks. After deducting 9.4 billion marks grants for the States, the Reich's income from taxes is about 28.3 billions. This is equivalent to 471.8 marks per head (not 394 as in the report), against 416.8 francs in France. But this is not the true burden of the German taxpayer. It is impossible at present to state the amount of taxes raised by the States. Their estimates are being revised over and over again, and no results are definite. But it is safe to assume that the total burden of the German taxpayer from taxes paid to the Reich and to the States is at least equal to the total revenue from taxes collected by the Reich, including such revenues from taxes as is granted to States and Municipalities. This is 37.7 billion marks, or a per capita burden of 628 marks, against 416.8 francs in France.

The method of measuring the burden of taxation by a mere division amongst heads is rather unsatisfactory. Taxes are paid from property and income. Their true weight can only be established by a comparison of taxes with income. There were fairly good statistics available in Prussia before the revolution in prices and the destruction of the middle classes changed everything. At present all is guesswork. There is not much use in starting from the "national income" with the object of finding the per capita income by way of division. All figures about "national income" before the war were based on rather unreliable estimates. Even if they were true before the war the change in economic values and in social stratification must upset all calculations.

The Brussels report assumes a per capita income before the war of 960 francs in France and of 625 marks in Germany; it assumes, furthermore, that the corresponding values to-day are 3,200 francs in France and 3,900 marks in Germany. If that were true, the average Frenchman would be paying 13.3 per cent. of his 3,200 francs income in taxes, and the average German almost 16 per cent. of his 3,900 marks. Government expenditure in France is 40 per cent. of this average income, against 42 per cent. in Germany—excluding such State expenditure as is not defrayed from imperial grants.

Some French authors have tried to carry these somewhat fictitious calculations one step farther.

417 francs are about 28 dollars to-day. 628 marks are nearly 9 dollars. Does this not show quite clearly that the average Frenchman pays about three times as much as the average German? This method has been improved upon by converting the average per capita income into dollars at par. The result is that the fortunate German pays 9 dollars on an income of almost 929 dollars, or somewhat less than 1 per cent., whilst the less fortunate Frenchman pays 28 dollars, or nearly 5 per cent., on an income of not quite 613 dollars (3,200 francs).

It would be easy to prove by calculations of this sort that a further fall of the German exchange is the best means of lessening the burden of the German taxpayer. If the dollar rose to 200 marks, the taxpayer would only have to pay 3 dollars, against the 9 dollars he pays at present!

Neither German nor French people, however, enjoy dollar incomes, nor do they pay their taxes in dollars. The burden of taxation must be measured in the currency in which the incomes are expressed. Both nations, however, depend on foreign supplies. Both have to meet foreign obligations. The per capita weight of the French foreign debt may be about 2,500 paper francs; the per capita burden of the first reparation instalment of 20 billion marks gold is about 5,000 paper marks in Germany.

The Germans use part of their paper income for supplies from abroad (just as do the French). Without them even the present low standard of living could not be maintained. This being so, the falling exchange brings about a further reduction of the income above the mere physical minimum, from which alone taxes can be paid. If the figures quoted

above are right, the per capita income in Germany is worth only 55 dollars to-day, against 213 dollars in France. According to all established rules of taxation, a tax of 9 dollars on an income of 55 dollars is a far heavier burden than one of 28 dollars on 213.

If the only reparation problem to be settled is, whether Germany is as heavily taxed as France, even the rather defective methods used so far show clearly enough that this part of the Treaty is being carried out.

Business Notes.

Cotton Profit Sharing Scheme. — The directors of the Amalgamated Cotton Mills Trust, Limited, which controls about 15 cotton-spinning and manufacturing concerns in Lancashire, and employs over 15,000 persons, have decided upon a scheme whereby the workpeople may participate in the profits of the Trust. The decision of the directors is that everyone employed by any firm in the Amalgamated Cotton Mills Trust, Limited, may have the opportunity of investing their savings in a loan, which will carry a minimum interest of 5 per cent. per annum, free of income-tax, and will also participate in profits. Generally, the amount of subscription will be limited to £200, with a minimum of £1, and the money must be the savings of the individual employee. Such interest will be paid that after deduction of income-tax a clear 5 per cent. per annum is paid on all money, and such interest will accrue from the last day of the month in which the money is deposited. This interest will be credited to the depositor on December 1st each year, or upon the date which the loan is withdrawn. Provided that a dividend of more than 5 per cent. per annum, free of income-tax, is paid on the ordinary shares of the Amalgamated Cotton Mills Trust, Limited, a further interest will be paid on all money which has been invested in the loan before the last day of any December and has remained on deposit for a period of twelve months. This interest will be at such a rate as will increase the 5 per cent., free of income-tax, allowed above, to a rate equal to that declared by the Amalgamated Cotton Mills Trust, Limited, on the ordinary shares in that company for a full year, and such interest will be paid from December 1st in each year. Money will be collected weekly under arrangements made by the managing directors, and loan books will be issued to all subscribers. When a depositor ceases to be employed by any firm of the Amalgamated Cotton Mills Trust, Limited, the loan will be repaid to the depositor with interest at 5 per cent. per annum, free of income-tax, to date, but where the depositor has been employed for more than ten years the managing director has the right to allow the depositor's money to remain on loan after the depositor leaves the employment of the firm.

Textile Machinery for Foreign Countries.—During the last week or two several representatives of European and Japanese textile interests have been in Lancashire for the purpose of purchasing cotton spinning machinery. They have found makers very deeply engaged, and most firms have contracts on the books which will take three to four years to work off. Owing to the impossibility of obtaining quick delivery, attempts are being made to purchase outright Lancashire mills, the idea being to take out the machinery and ship it abroad, after which the buildings will be resold. Negotiations between buyers and the directors of certain companies are said to be taking place, but there is some doubt as to whether transactions of this kind can be considered a business proposition. The foreign representatives are chiefly interested in ring spindles, but this class of machinery is very hard to get hold of, the tendency even in Lancashire being to replace mule spindles with ring spindles. In pre-war days the basis of a new ring mill was about 30s per spindle, but to-day even for second-hand frames probably £5 per spindle would have to be paid.

American Cancelment of Orders.—During the last few weeks cotton spinners, manufacturers, and merchants in Manchester have met with numerous requests from American houses for the cancelment of orders, and on Thursday last a special meeting of firms interested was held at the Manchester Chamber of Commerce. Several speakers gave instances of attempts to cancel contracts without any justification whatever. Of course, this development is due to the slump in values. After a full discussion the meeting placed on record its unanimous opinion that the sanctity of the contract should be maintained, and that no cancelments should be agreed to where the terms of the contract have been carried out. It was decided to urge traders in America to recognise this principle, and to take every possible step to induce the defaulters to shoulder their responsibilities, as it is feared that a continuance of the present disturbed relations will permanently injure trade between the two countries. It is understood that some Manchester firms are contemplating taking legal action in the United States, but they are advised that a policy of this kind is seldom satisfactory. The officials of the Manchester Chamber of Commerce have been in communication on this matter with the American Chamber of Commerce in London, and an arrangement has been come to whereby the American Chamber of Commerce in London will forward to the Chamber of Commerce of the United States details of any disputes. The organisation in the United States will then bring the complaint to the notice of the American importer for the purpose of securing a statement of facts from his point of view. Manchester merchants have decided to adopt this scheme, and individual firms are being asked to send to the Secretary of the Manchester Chamber of Commerce full details of orders for which cancelments have been requested. It is estimated that at the moment contracts amounting to nearly £2,000,000 are in dispute. It may be mentioned that Lancashire cotton manufacturers this year have done a big trade with the United States, the shipments of cloth for the nine months ended September being over 91,000,000 square yards, against less than 22,000,000 yards in the same period of 1919, and less than 30,000,000 yards in 1913. More yarn is also being exported from Great Britain to the United States, the shipments for the nine months ended September being 8,322,000 lbs, against 2,384,000 lbs in 1919, and 4,136,000 lbs in the same period of 1913.

British Dye Industry.—More determined efforts, writes our Manchester correspondent, are now being made to secure protection for the British dye industry. Strong representations are being made to the Government in favour of a more pronounced policy with regard to importations, especially from Germany. Over two years ago the Government promised that the importation of foreign dyestuffs, except under licence, should be prohibited for 10 years. In February, 1919, a proclamation was published for the purpose of bringing about such prohibition. In the following December, however, Mr Justice Sankey declared the proclamation invalid. Since then the Government has promised legislation, but no definite date has been given for introduction of the Bill. Attention is being drawn to the larger receipts of dyestuffs in Great Britain, and certain interested parties are pressing the authorities to institute either a tariff or a limitation of imports. Of course, a different point of view is taken by colour users in this country, and it is held that so long as supplies from abroad are artificially restricted, the textile industries will be seriously handicapped in competing in foreign markets with manufacturers in other countries.

Trade Conditions in South Africa.—The following items of information relating to trade conditions in South Africa are issued by the Standard Bank of South Africa. The value of the output of South African industries in 1919 rose by £10,000,000 to £70,000,000. In the six months ended September 30th, the income of the Union was £15,273,895, and expenditure £13,968,725. Imports for the three months July to September were valued at £27,975,412, and exports at £16,311,014, the export figure including £10,811,604 worth of gold. The country is well stocked with motor cars. During the eight months ended August 6,352 cars were imported, valued at £1,750,307. Diamond exports showed further increase in September. Record crops of wheat are expected in most grain districts, and the yield of oats is expected to reach the average. A cable received by the National Bank of South Africa from their head office at Pretoria points out that the Union expenditure for the first half of the financial year is less than half that estimated for the full year, and adds: "Whereas a £165,000 deficit was anticipated, it is now undoubted that a substantial surplus can be expected."

Finance in New Zealand.—The following is an extract from a cable, dated October 29th, received by the High Commissioner of New Zealand from his Government:—"The Hon. W. F. Massey denies the report that New Zealand is raising loans in America. The Government hopes to obtain in New Zealand all the money required in the way of loans. New Zealand local bodies are experiencing difficulty in raising loans at 5½ per cent. The Bank of New Zealand Bill, at present before the New Zealand Parliament, proposes the transfer of £1,125,000 from reserve to capital, and the increase of the Government's holding from one-seventh to one-third. Shares will be made £1 instead of £10. The New Zealand Government is offering £150,000 in the form of bounties to encourage the local manufacture of iron and steel. Abundant deposits of iron-sand exist in various parts of the Dominion, but have never yet been worked on an extensive scale. Speaking in the House of Representatives, Mr Massey said that the shipping position was still very unsatisfactory, and that the present rates of freight were likely to crush the meat industry, but that it was doubtful whether any Government could successfully operate shipping lines. The ships run by the Australian Commonwealth had not yet carried a single carcase of frozen meat. The New Zealand Public Works—estimates provide for the sum of £2,245,000 to cope with the great amount of work ahead. The Public Works Department is to be reorganised and strengthened. It is proposed to encourage as far as possible the contract system for public works. Hydro-electric schemes are to be developed without delay, and the laying down of light railways to serve country districts if authorised."

Japanese Trade and Finance.—Latest advices from Tokyo give the note circulation and advances of the Bank of Japan as 1,192,000,000 yen and 243,000,000 yen respectively. Signs of recovery are reported in the Japanese textile trade, as winter clothing is in demand. The cotton yarn market is enjoying renewed activity; prices look stabilised, and the Export Association has decided to dispose of its stocks by tender. In consequence, cotton yarn shares on the Stock Exchange have enjoyed a sharp recovery, which has caused an upward tendency for other shares. Quotations in the rice market are weak, and silk is very quiet, the price of "future" having at one time actually gone below 150 yen. The Imperial Filature Company is expected shortly to begin buying up surplus stocks on the market. Little change is reported in the money market, where conditions remain quiet.

City of Berne Loan.—Cable advices from New York announce that Messrs Speyer and Co. have purchased $6,000,000 City of Berne (Switzerland) 25-year 8 per cent. Sinking Fund Gold Bonds, to be offered in America for public subscription. The City of Berne will pay Speyer and Co., the fiscal agents of the loan, as an annual sinking fund sums sufficient to redeem each year for the first five years $120,000 of bonds, for the next ten years $240,000 of bonds, and for the remaining ten years $300,000 of bonds. For the first five years these bonds are to be purchased in the market up to 107 and interest, and to the extent that bonds cannot be so purchased such balance of bonds is to be drawn by lot at 107 and interest two months preceding November 1, 1925, for payment on that date; thereafter bonds are to be drawn by lot annually at 107 and interest. The bonds are redeemable after five years at the option of the City of Berne, in whole or in part, at 107 and interest.

The New Order in Mexico.—Last Saturday President Wilson's Secretary of State, Mr Bainbridge Colby, announced that the United States will formally recognise the new Government of Mexico on condition that an International Commission shall be appointed to decide on the indemnities due to foreigners for damage suffered in the revolution, and that Mexico shall agree to recognise its financial obligations to all foreign creditors, and not to enforce the clauses in the Carranzist Constitution which enable it to treat the oil under foreign-owned lands as the property of the State. The announcement had been preceded by considerable negotiation, both in the Mexican capital and in Washington, latterly conducted through Señor Roberto Pesqueira, a special "confidential agent" of the De la Huerta Government. But the conditions specified had been promised by General Obregon during his recent tour in Texas, and he had then invited Americans to visit Mexico and see what was being done to secure the co-operation and friendship of the United States. The Mexican Government has recently shown that its stability has increased; it has eliminated Felix Diaz, successfully coped with the brigand chief Zamorra, and more recently has granted compensation in the form of a sum down and a substantial annuity to the widow of Mr Benton, the English ranch owner put to death by Villa in 1914. The people generally are tired of revolution, and commercially the prospect is so promising that the branch of the Anglo-South American Bank recently established in Mexico City has decided to receive deposits besides dealing in exchange. There seems little doubt that Great Britain and France will follow the lead of Washington, and the new Mexican Government may now resume its negotiations with American financiers for a loan with better hopes of success. The announcement has caused a sharp rise in Mexican Government bonds and in some railway stocks.

Frederick Hotels.—The report of Frederick Hotels, Limited, for the year ended June 30th last gives promise of better things to come for ordinary shareholders, who have not received a dividend since a 2½ per cent. distribution was made for 1912-13. Gross profits show a large increase over those of the previous year, but they have been utilised to redecorate and thoroughly renovate the Hotel Great Central, which has been in military occupation. A large claim is being made against the Government for reinstatement of the hotel and for rent during the period of reinstatement, and when it is settled the directors "hope to be in a position to pay a dividend on the ordinary share capital and to transfer a sum to reserve." Results for the past five years and for 1913-14 are compared below:—

YEAR ENDED JUNE 30.

British Bank of Northern Commerce, Ltd. *Barclay's Bank, Ltd.*

from which is deducted a reserve for deferred repairs and renewals, £44,347. An analysis of the balance-sheet, which will be found in the usual column, shows that a cash balance of £41,700 has been changed into an overdraft of £25,300, but otherwise there are no changes of importance.

British and Hungarian Bank.—Formerly the Ungarische Bank und Handels-Aktiengesellschaft of Budapest, the report and accounts for the two years 1918 and 1919 are issued under the title of the British and Hungarian Bank, which is henceforth to be its official name. By special resolution, it was decided to bring the bank under British influence, and 250,000 new shares were created of a nominal value of 400 kronen each. These shares have been acquired by a group of British financiers at 810 kronen per share. The report states that, "as we have announced to the extraordinary general meeting, the supreme management belongs to the British group, which took the new shares, viz., the Marconi's Wireless Telegraph Company, Limited, of London." The total share capital of the bank is now 220 million kronen, and reserves amount to 166 million kronen.

Mr F. W. Field, H.M. Trade Commissioner at Toronto, who has recently arrived in this country, is at present at the Department of Overseas Trade, interviewing firms in London who are desirous of obtaining information as to the possibilities of extending their trade in Canada, and who wish to take this opportunity of consulting him on any matters connected with their business with that country. London firms who are desirous of consulting Mr Field should communicate with the Department of Overseas Trade, 35 Old Queen street, S.W. 1. He will subsequently visit some of the leading industrial centres.

UNITED STATES.—BONDS VERY ACTIVE AND STRONG: NEW EUROPEAN OFFERINGS QUICKLY ABSORBED—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

New York, October 22.

The one bright spot in the financial situation here is the bond market. Practically all active and many usually inactive issues continue to enjoy a brisk demand, with further advances in both corporate and Government bonds. The upward tendency which has been in evidence for several weeks, but is now more general and pronounced than heretofore, is the natural accompaniment of receding commodity prices, and plainly foreshadows easier credit conditions and relaxation in money rates. There are no signs as yet of any slackening of investment demand, or of "undigested securities." Practically all offerings of new issues have met with marked success; in fact, the absorptive capacity of investors surprises even bankers themselves. A most remarkable feature is the seemingly insatiable appetite of American investors for foreign, especially European, issues affording attractive yields. This statement is no exaggeration, as is evidenced by the almost immediate sale of any such offering. The rush to subscribe to new European securities floated here shows a very striking change in the attitude of people who heretofore have confined their investments principally to domestic issues. The very satisfactory manner in which the $500,000,000 Anglo-French was redeemed is largely responsible for this, and funds released through that operation are undoubtedly being re-invested in new securities, both foreign and domestic. Since the first of the year, foreign Government bonds, representing external loans, and offered by bankers to the American public, aggregate approximately $300,000,000. Owing to the enormous amount of industrial financing done by domestic concerns during that period, in addition to other requirements, and the abnormally high price paid for capital, foreign borrowers have had to pay extraordinary rates for loans obtained here. Economic conditions, however, seem to point to a lowering of interest rates in the not distant future, which may make it possible to finance foreign requirements on easier terms than heretofore. It is expected that under such conditions some of the foreign Governments and municipalities may deem it advisable to refund their securities outstanding here with new loans at more favourable rates. Most of the foreign loans recently floated in this market have active redemption features, and callable prices, which enable the issuing countries or cities to take such action should future developments warrant. This week's issues of new securities included $5,000,000 City of Christiania 25-year 8 per cent. sinking fund gold bonds, offered to the public at 99, and accrued interest; $6,000,000 City of Zurich 8 per cent. 25-year sinking fund gold bonds, offered at 99½, and accrued interest, both of these issues being sold before they were formally advertised; and $25,000,000 Kingdom of Denmark 25-year 8 per cent. sinking fund bonds, offered at par and interest. Subscription lists for this loan were closed to-day half an hour after they were formally opened, the issue having been heavily over-subscribed. The purpose of the loan, it is explained, is to supply the Danish Government with dollars with which to meet the exchange situation—exchange on Denmark in this market now stands at a discount of about 50 per cent. Various banks and investment houses here have opened subscription books for the 6 per cent. national loan now being offered by the French Government, and a large amount of the bonds has already been taken by American investors. Subscriptions entered in this country are payable in full, in dollars, at the time of purchase, the price being based upon the prevailing rate of exchange of the previous day, as fixed by the French Finance Commission. A Brazilian loan of about $40,000,000 is expected to be offered here shortly.

A noteworthy and important feature of the convention of the American Bankers' Association in Washington this week was the report of the Committee on Commerce and Marine, definitely recommending the formation of a $100,000,000 corporation under the Edge Law to finance America's foreign trade. The Committee declared that the time is opportune for the creation of such a corporation, that there is urgent necessity for such an organisation functioning effectively, and that steps should be taken immediately by individual bankers and business men to establish it. Another feature was the address of Secretary of the Treasury Houston, which was in effect a reply to the recent appeals by farmers for Government help in upholding prices of cotton and grain. He described their attitude as "unwholesome and menacing." The Treasury, he said, has no money to deposit except for Government purposes, adding that individuals and communities "must return to a normal degree of self-help." He outlined the Treasury's programme for handling the war debt, and emphasised the necessity of the strictest economy in Federal, State, county and municipal expenditures, as well as thrift on the part of the public, since the programme called for the maintenance of taxation after this fiscal year on a level of not less than $4,000,000,000 annually. Secretary Houston said that the Treasury's plans had been disarranged by the heavy burdens imposed by the Transportation Act. He estimated the total amount which the Government will pay the railroads at $1,000,000,000, about one-fourth of which has already been turned over to the carriers, the remainder will probably be paid by next spring. The Secretary predicted rapid reduction in the gross national debt during the coming year, particularly the $2,850,000,000 short-term certificates outstanding; the Treasury programme, he said, would result in reducing this below $2,000,000,000, and possibly to $1,500,000,000. By the end of the fiscal year 1922, he declared, the Treasury should have redeemed its entire floating debt, or the short-term-certificates, when the Victory notes maturing the next year would become practically the floating debt, and probably be accepted in payment of Federal taxes.

Briefly summarised, retail trade is less active, unusually warm weather retarding the movement of seasonal lines; wholesale and jobbing trade is quieter, and there has been further curtailment of production by many mills, factories and furnaces; prices are still unsettled, with additional and quite general declines in both foods and commodities, and in the metal trades. In connection with the business readjustment, an interesting and significant development is the action of workers in various textile mills in accepting, and in some cases voluntarily suggesting, wage reductions of 10 to 20 per cent., in order to permit the mills to continue operations.

FRANCE.—THE NEW LOAN—COAL MINERS' DEMANDS—THE BANKING POSITION—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 2.

IT is difficult, of course, to obtain any reliable information as to the manner in which the new 6 per cent. National Loan (subscriptions to which began on October 20th) is being taken up, but so far as can be seen there is good reason to believe that one at least of the objects of the new issue—the transformation of Bons de la Défense, and other short-term securities that constitute so large a proportion of the French floating debt, into long-term liabilities, or Rentes—will be largely achieved. The condition which allows of subscriptions being paid as to one-half in cash or in Bons de la Défense, and as to the other half in consolidated war loan stock, which is accepted by the Treasury at an advantageous price for holders, is proving very attractive to investors, in spite of the fact that the new Loan is issued at par. To the foreign investor, the new Rente, if bought in American dollars, at the present rate of exchange, will yield when the franc returns to its normal value 17.79 per cent.; if bought in Spanish pesetas, 13.20 per cent.; in Swiss francs, 13.63 per cent.; in English sterling, 13 per cent. It is believed here, in view of the manner in which foreign public opinion has been influenced by the determination shown by France in imposing heavy new taxation, by the manner in which the taxpayers are meeting the demands made upon them, by the enormous reduction in the adverse trade balance already made, and by the energy which France is throwing into the work of reconstruction, that the proportion of the new loan that will be taken up by foreign investors will be found to be unexpectedly large. As disclosed by the Finance Minister, M. François-Marsal, in his Strasburg speech, France, which before the war paid less than 5,000 million francs in taxation, is now paying nearly 20,000 millions. The bulk of these new taxes fall mainly on income and capital. One interesting fact referred to by the Finance Minister is that 68 per cent. of the indirect taxation now being collected is being paid by smokers and drinkers.

There are reasons to fear that, encouraged by the action of the British miners, the men employed in the French coal mines may proclaim a general strike on November 15th. The Fédération du sous-sol recently put in a demand to the Government for a further general increase of wages that would have the effect of giving the average miner something like five times his pre-war wages. The miners' demands, which also include one that would have the effect, if granted, of placing the unskilled labourer nearly on a par, so far as wages are concerned, with the skilled coal-getter, were handed by the Government to the Comité Centrale des Houllères, which represents the coalowners of the country, for that body to consider and report upon them. M. Darcy, the secretary for the coal-owners' association, in the reply which he has just forwarded to the Government, states that since 1913 the wages of the French working miner have been progressively increased to a mean co-efficient of 368 per cent., while at the same time the average output per individual has fallen by 35 per cent. The proportion of labour cost in the cost price of coal at the pithead has consequently, on an average, more then quintupled, and constitutes today nearly 60 per cent. of the average sale price of the coal at the pithead. The dividends paid to shareholders in 1913, which then amounted to 12.5 per cent. of the sale price at the mine, have now fallen to the neighbourhood of 4 per cent.

Referring to the demand now put forward by the miners, M. Darcy asserts that for the majority of the men, especially in the case of those who are unmarried, the wages at present paid furnish a sufficient margin between the money received and the cost of living, while in many cases the margin is much greater than it was before the war. On the other hand, he admits, the situation in the case of certain of the men with large families appears to be difficult. The coalowners dismiss as absurd the miners' demands for a datum line fixing the respective wages of skilled coalgetters and unskilled labourers employed on the surface on bases that would bring the wages of the two categories within 1f 50c per day of each other. Finally, they assert that, in view of the present high price of coal, it would be impossible to grant the demands put forward, which must inevitably add to the price of combustibles. (Ordinary household coal is now sold in Paris at the fixed price of 270 francs per ton.) There are hopes that the Government will be able to arbitrate satisfactorily, but meanwhile the men have passed provisional resolutions for a general miners' strike beginning on November 15th.

The "Economiste Européen" publishes this week a complete study showing the condition of the various great French banking establishments up to June 30 of this year. The analysis of the situation, for which M. Edmond Théry is responsible, shows the summarised situation of the chief great houses, namely: Crédit Lyonnais, Comptoir National d'Escompte, Société Générale and the Crédit Industriel et Commercial. The Crédit Foncier is deliberately omitted, as this is established for special purposes foreign from those of the other great banks. The comparative table sums up the situation in millions of francs at the various dates, and is as folows:—

	June 30 1914.	Dec. 31 1917.	Dec. 31 1918.	June 30 1919.	Dec. 31. 1919.	June 30, 1920.
Cash in hand and at bank	617	1.277	870	1.458	1.099	1.246
Bills and Bons de la Défence National.....	3.542	3.976	4.825	6.145	8.746	9.303
Advances and renewals	1.081	667	617	642	777	950
Debtor current accounts.....	1.929	1.362	1.670	1.872	2.596	3.374
Securities and shares	153	155	153	160	163	156
Sight deposits and credit current accounts.....	5.455	5.963	6.705	8.933	11.949	12.576
Deposit accounts	380	323	318	336	345	336
Acceptances.....	447	93	55	99	174	240
Paid-up capital and reserve	1.412	1.345	1.346	1.371	1.371	1.376

What will be noted from this table is particularly the increase in sight deposits and credit accounts, and parallel with this the increase in bills and Bons de la Défence National, also in current debtor accounts. Deposit accounts have tended to decline, owing to the urgent need of money for trade and industry. The increase in advances and accounts carried over is symbolic not only of the urgency of cash requirements, but also of the speculation which was so marked a feature during the first six months of the year.

The Bourse throughout this week has been again depressed, and the markets generally have consequently been inactive. Even foreign securities have not been able to maintain the advance that they enjoyed as a result of the exchange. As regards this latter feature, some surprise has been felt at the marked appreciation of the pound and the dollar, but in commercial and industrial circles this is explained as being due largely to speculation. It had been thought that the coal strike in England would have resulted in a depreciation of sterling, but in the past months British capitalists have been heavy purchasers of francs, in the confident expectation of the economic revival of this country. Naturally, the uneasiness caused by the coal strike has reversed this position, and thrown a large number of francs held by British capitalists on the market. Moreover, there can be no question but that France at present is passing through the same type of industrial crisis that has occurred in Japan and elsewhere. Large stocks of goods have been accumulated, mostly against bank credits. These, in view of the situation, have been restricted, with the result that large quantities of securities have been thrown on the market. With the exception of the 3 per cent. French Rentes, which have risen from 54.60 to 55.75, there has been little change in Government stocks. There has been a decline in banking securities, Banque de l'Algérie dropping from 38.80 to 37.55, Banque de France from 287 to 276, and Banque de Paris from 16.50 to 16.35.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—FINANCE—EXCHANGES AND BOURSE—BANKERS' CONGRESS — COAL — INDUSTRY — PRICES—HOUSING.

(FROM OUR CORRESPONDENT.)

BERLIN, October 30.

THE past week has been marked by pessimistic utterances in the Reichstag and elsewhere, and by threatening industrial and financial symptoms. On the 27th the Chancellor delivered a speech to the Reichstag, sharply attacking French policy, and using expressions—"The French claim to hegemony," "French militarism," and "barbarous methods"—which are a novelty after the habitually cautious language of his Socialist predecessors. There is a good deal of this kind of language in the Press, used as a rule by persons who believe that a crash must come, and who hold that the sooner it comes the better. The speech, introducing the Budget of the Finance Minister, Dr Wirth, was only negatively startling, in that after a black picture of the public finances, the figures of which have already been reported from here, no hint was given of any real measures of amelioration. Dr Wirth declared that his present chief aim is not to propose new taxes, but to enforce the old. He promised a Law which would make it possible to realise immediately a great part of the emergency levy, and added that a compulsory civil service year must be considered, and must sooner or later come. He declared that Germany is in any case "in slavery," and that "it is unheard-of that so long after the signature of the Peace Treaty our obligations have not been determined." The debt of the Republic he put at 288 milliards, and added that it would increase by 40 milliards before the end of the financial year.

After beginning the week below the highest level of last week, the foreign exchanges began to rise sharply; and to-day, with sterling selling at 264.30 and the dollar at 76.58, reached the highest point of the present movement. One cause given for this rise is a heavy demand for foreign currency in South Germany; the main cause seems to have been selling on the bad Budget statement. The Bourse is in a very shaky condition; wild speculation has been the rule during the last fortnight, and a week ago the 35 stocks and loans usually used as index were together quoted at 15,052, as against 14,429 a week before, and 9,557 at the bottom of the May decline. The beginning of this week brought a sharp break, as a result partly of a temporary weakening of the exchanges, partly of circularised warnings by the banks, and partly of gloomy reports presented to the Bankers' Annual Congress. On Wednesday there was a new wild bull movement; and since then have been sharp up and down movements without any pronounced general tendency. Indications are that the bull speculators at last feel uneasy, though nothing except a reversal of the exchange movement would be likely to cause a prolonged break. The falling mark brought plenty of foreign buying orders, and produced a new mild boom in the favourite 3 per cent. Federal Loan, which rose another 4 per cent. The decline at beginning of the week began with coal and iron stocks, and there were sharp drops; but recovery was hastened by the report of the important Mannesmann Tube Company of gross profits in the last business year of over a hundred million, or four times the profits of 1918-19. Toward the end of the week the heavy industry stocks were a little depressed by the refusal of the Government to sanction an increase of coal prices. To-day the Bourse was quiet, but inclined to be firm. The last three days have seen a heavy demand for foreign bank notes, always here a sign of public distrust.

The Bankers' Congress brought a great many pessimistic statements by experts, demands for revision of the Versailles Treaty, and condemnations of suggested financial expedients. Sharp attacks were made on the Government's plan to organise public industrial credit. The banker Dreyfuss, of Frankfort-on-Main, suggested a loan with variable interest, the minimum to be 5 per cent., to which would be added a varying supplement sufficient to keep the stock at par. The Hamburg banker, Max Warburg, one of the best experts on currency and exchange questions, declared that as long as no balance was produced in the State finances, all plans for stabilising the

reichsmark would fail. He referred to plans for devaluation, short-term currency, new national currency, a secured "mortgage currency," and reintroduction of the former exchange regulations (abolished in September, 1919). He condemned also the plan of a World Note Bank, and of international financial control, and expressed doubt whether the plans to get hold of mark credits in foreign banks could be carried out. The consolidation of the floating debt, said Herr Warburg, would be impossible as long as Germany's obligations under the Peace Treaty are unknown. He opposed a compulsory loan as impracticable simultaneously with the emergency levy; and advised simplification of the laws against export of capital, sharper measures against imports of luxuries, the furthering of export of half-finished and finished goods, organisation of exchange trading for future settlement, and gradual abolition of the Dahlehenskassen. The Congress demanded restoration of banking secrecy.

The coal situation, particularly for the heavy industry, is becoming worse. The Reichskohlenrat this week approved by a large majority a demand of the Westphalian Coal Syndicate for an increase of 15 marks per ton. The Government refused to sanction the increase on ground of its general bad effects on business. Germany is now buying American coal at $30 per ton free Rotterdam, which at present exchange is nearly ten times the pit's mouth price of the best Westphalian coal; but this import is possible only for exporting manufacturers who have definite foreign orders, enabling them to get back the high coal price on exchange. Herr Stinnes has propounded a plan for organising the consumers everywhere as local managers of the coal industry, they to put energy and money into the expansion of mining, and to get 90 per cent. of the resulting increase in output. He expresses himself strongly against the present centralisation. On October 25th the Federal Commissioner for Coal Distribution reported many cases of shortening of production. The Gelsenkirchen Mining Company has blown out one of its four blast furnaces; the Bochum Verein has stopped a rolling mill; the Hoesch Works reduced production of blast furnaces and Siemens-Martin works 25 per cent.; and the Phœnix Company has only eight blast furnaces out of 17 working. The West and South-West finishing factories have had their coal ration decreased 28 per cent. as compared with May; the fine steel works 34 per cent. A large number of factories are listed as having stopped work partially or wholly. Works producing railway material have been badly affected. Another report says that the mills of Solingen and Remscheid have heavily cut down production; and that in Hagen the coal shortage has reduced working time by 450,000 hours a week.

Where coal shortage does not stop work, the condition of the finishing industries is fairly good, though the expected winter boom has not yet come. Herr Stinnes has founded yet one more concern, a company which is to handle coal, wood, &c., electrolytically and electro-technically. American plans are under way to establish works for construction of fine mechanism in Germany. One of the largest American companies is negotiating with the Government with this aim. The textiles branch is lively; but the home demand is mostly for cheap qualities. Wholesale textile prices are mostly 50 per cent. below the maximum of the spring. Textile companies report profits of as much as 400 per cent. over those of last year. The cigarette industry complains of English competition. The home paper market is very dull, owing to decline in size and circulation of publications; most newspapers are at present not taking their full ration, and the State control system has become superfluous. Buying of German paper by foreigners is increasing, and the manufacturers have asked the Government to increase the exportable ration. A plan for a paper export monopoly is being discussed. Many new fusions or agreements for a common policy are reported, the most important being an agreement between the Elbe-Rhine Union (the fused Deutsch-Luxemburg and Gelsenkirchen Companies) and the Siemens-Schuckert Electrical Company, the aim being to secure to the latter a sufficient supply of raw materials.

Prices of metals and of commodities immediately affected by foreign markets have risen sharply as result of the fall in mark exchange. Metal prices (marks per 100 kilos) have moved as follows since maximums were reached in February :—

	Feb. 17.	June 29.	Oct. 26.
Electro copper (wire bars)	4,625 ..	1,590 ..	2,472
Tin	14,600 ..	4,000 ..	6,300
Pure nickel (98-99)	8,200 ..	3,800 ..	4,450
Antimon regulus	2,400 ..	750 ..	950
Lead	1,750 ..	450 ..	765

Other recent price movements are :—

	July 30.	Sept. 25.	Oct. 23
Cotton, marks per kilo.....	44 ..	53½ ..	44.50
	July 30.	Sept. 25.	Oct. 26.
Cotton yarn	66—77 ..	70—85 ..	70—95
Cotton cloth, per metre	9½—12 ..	10½—14 ..	11—14
	End August.	Oct. 2.	Oct. 23.
Sole leather, per kilo	60—75 ..	68—90 ..	72—90
Boxcalf, per square foot	15—19 ..	20—28 ..	22—30
Chevreaux, per square foot....	20—35 ..	20—40 ..	20—40
	June.	Oct. 2.	Oct. 23.
Boots (production cost)	160—220 ..	165—230 ..	170—235

The prices of most food commodities tend to vary only slightly up or down. The heavy mark exchange drop has not so far produced any great rise such as that which occurred last winter. The same is true of most manufactured goods, and the cost of living expressed in gold has therefore fallen considerably during the past couple of months.

The Government is preparing a law intended to solve the housing question for the whole Republic. The Housing Bureaux in all cities have long lists of applicants for houses and flats, and even persons with urgent claims wait a year or more. Housing is already State-regulated, with so far deplorable results. Rents are limited to 30 per cent. over those of 1914; that is, they are in gold, or in proportion to the largely increased paper earnings, only a small fraction of what they were before the war. No big repairs, and only the indispensable small repairs are done; house-owners are ruined, and in thousands have to ask for postponement of claims for taxes; and building has ceased. The Municipal Housing Bureaux are often corrupt and always inefficient, and though in theory houses and apartments are given first to persons with urgent family or occupational claims, in practice anyone with no claim but money can get dwelling. Homeless citizens are compulsorily quartered on persons supposed to have too large dwellings; but rich single couples occupy vast flights of rooms. As occupiers cannot be put out by their landlords, and as they pay no more for a year's rent of a considerable flat than would purchase a suit of clothes, their permanent tenant right acquires a high monetary value; it changes hands for vast sums. So, the housing famine is a theatre for "Schiebertum" and exploitation. The socialisation of flat-houses is discussed; but it seems that the State regulators have even more efficient plans for bringing about the destruction of the cities.

CANADA.—THE TARIFF COMMISSION—DEMAND FOR REVIVAL OF CONTROL—THE AGRARIAN MANUFACTURING CASES—DECLINE IN GRAIN PRICES—EFFECT ON TRADE—OIL STRIKE IN THE NORTH—SUGAR IMBROGLIO—APPEAL AGAINST FREIGHT RATE INCREASES—CUSTOMS AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

SAULT STE MARIE, October 18.

SINCE leaving British Columbia the Tariff Commission has spent the last fortnight in the prairie provinces, and held sittings at Calgary, Edmonton, Saskatoon, Regina, Brandon, and Winnipeg. In British Columbia the preponderance of sentiment as expressed in memorials and addresses had been in favour of maintaining the tariff at its present level, but as soon as the prairies were reached the full blast of the anti-Protectionist sentiment which is so strong among the farmers began to make itself felt. At all the places above-named there appeared strong delegations of representative farmers who voiced vehement hostility to the existing economic system, and urged immediate and drastic reformation. The majority of the farmers, while emphatic about the evils of Pro-

tection and its handicaps upon agriculture, insisted that they had no hostility to Canadian manufacturers, and were merely desirous of reforms to be carried out by gradual stages, which would improve the prospects of the primary natural industries of the country. The main case of the farmers is that each country has basic capabilities for the production of certain articles. Those of Canada lie towards the production of grain, cattle, lumber, and minerals. But they contend that the full and most profitable utilisation of these capabilities has been enormously retarded in the past by the favouritism shown to artificial industries which only exist as parasites upon the natural ones, through the medium of protective legislation. Their most powerful argument which the manufacturers have made no attempt to answer is the disappointing growth of Canada's population at each successive census. The anti-Protectionists deny that tariff reductions would imperil the industrial fabric of the country, but, on the contrary, maintain that, freed from onerous burdens, the natural industries would show immediate and rapid expansion, and the ever-increasing need to supply the wants of the growing population engaged in these natural industries would maintain and improve the prosperity of existing urban communities, and create new centres devoted to catering for their demands in many commodities which can be most profitably manufactured locally. The manufacturers claim that the home market in Canada absorbs 80 per cent. of the produce of Canadian farms, but the farmers produced figures to show that 50 per cent. was nearer the mark. The final memorial of the Canadian Council of Agriculture at Winnipeg concluded with a forcible plea for a reduction and fundamental change in the tariff, "whose higgledy-piggledy appearance still reflects the varying energies and influences of the old professional lobby." It was absurd to contend that political patronage had been abolished when the tariff remained in its present form.

Before the 1920 wheat crop began to move Governmental control ceased, and the Canadian Wheat Board, which operated to the satisfaction of the farmers last year, passed out of existence. The Canadian Council of Agriculture strongly urged its continuance for at least a year, but the Winnipeg Grain Exchange, which was anxious for an open market and the possibility of speculation, had more potent influence at Ottawa. The Government, however, took enabling powers for control, and promised if necessary to use them. The general expectation was that grain prices would be high, and the secretary of the Winnipeg Grain Exchange publicly stated that wheat would range from $3 to $5. In the early days of harvest the market remained firm, but once the crop began to converge in volume on the head of the Lakes there was a rapid slump in prices, and in a fortnight the price had declined on an average 50 cents. The costs of production had been very high, labour demanding $8 per day, and the new freight schedules meant a loss of 6 cents per bushel to Alberta farmers. There was great wrath among the farmers, who began to clamour for the restoration of control and the Wheat Board. The cause of the decline is placed at the door of the British Government, who are declining to buy Canadian wheat at the present prices, and though American millers have done some buying, no adequate export market is available. Prices have remained fairly steady on the Winnipeg exchange for the past week, for the simple reason that the dealers are unwilling to buy and the farmers are holding back their stocks. But this state of affairs cannot last, as the farmers have to secure money to pay their store bills and mortgages, and the banks must have their loans liquidated. The effect of the slump in grain prices and the blocking of the disposal of the crop has been serious upon business. The farmers have been unable to make their usual purchases, and the retailers are disinclined to place further orders with wholesalers, the result is that the Winnipeg merchants report the dullest autumn trade for many years, and at least one of the large departmental stores in the city has been compelled to pay off a large number of its staff. Inevitably the reaction is being felt in lack of orders for factories, and the spectre of unemployment is raising its head in numerous industrial centres at an unfortunately early date in the year. It is now being generally realised that during the coming winter Canada must set her house in order and face a spell of trade depression. But luckily she has almost half her population on the land, and the pulp and paper industry is proving a timely source of economic strength. She is not likely to suffer as much as the United States, where the depression is assuming serious proportions, and compared with most European countries she forms an exceedingly cosy corner of the universe.

The Imperial Oil Company is reported to have struck good commercial oil in great quantities at Fort Norman, a Hudson Bay post on the Mackenzie River, about 1,500 miles north-west of Edmonton and about 150 miles south of the Arctic circle. Prospecting operations have been carried on over a wide stretch of territory in this region during the past few years, and there have been many rumours of valuable strikes, but this is the first which has been really authenticated. In an interview at Toronto Mr C. O. Stillman, president of the company, which is a subsidiary of the Standard Oil, said: "We consider this a most important strike, and essentially of much value. From, however, a commercial point of view it is of no immediate value, and it will be years before this oil can be available for the Canadian market in quantities." He states that the strike is 900 miles from the nearest calling point of boat and 1,200 miles from the railhead. The oil was encountered on August 25th at a depth of 783 feet. Confirmation of the existence of a great oil field in the north would be a godsend to Canada at the present time. It is understood that the Whitehall Oil Company, which represents the Cowdray interests, is making plans for extensive prospecting operations in Alberta in the near future.

The dominant topic in Canada at the time of writing is sugar, and the performances of the Board of Commerce in connection therewith. For many months sugar in Canada was subject to governmental control, and at one period an embargo on its export was in force. This Government intervention probably prevented sugar from reaching in Canada the highest prices touched in the United States, but at most only a difference of one or two cents could be attributed to this action. In August the price in both cities had mounted to the same level, 25 cents. Then came a serious break in sugar prices, but it was soon discovered that the Canadian price was being maintained at a much higher level than the American. It at once became profitable for dealers, candy manufacturers, and others to import sugar, and an inflow commenced. But the Customs Department was suddenly found to be enforcing the dumping clause and giving it an interpretation quite beyond its intended scope to prevent sugar importations. Difficulties were placed in the way of landing a cargo of Java sugar at Vancouver. The suspicion began to grow that interested parties were exercising undue influence over the conduct of the Government and its Customs officials. The sugar business in Canada is practically controlled by four large refineries located at Eastern ports. It became known that these refineries held very large stocks of sugar purchased at high prices, and that they were faced with the prospect of heavy losses if the Canadian prices slumped. In 1919 the Government instituted a body called the Board of Commerce, whose function was to regulate prices and if possible curb profiteering. It had a somewhat chequered and wholly ineffective career, and speedily forfeited public confidence. The legality of its very existence was being tested in the courts, and it had almost slipped out of the public mind, when it suddenly a week ago issued an order in full conformity with its normal powers stabilising the domestic retail price of sugar at 21 cents per pound and forbidding its importation from the United States. By this time sugar was selling in American cities like Detroit just across the border at 12 cents and lower, and the effect was electric. The fiercest storm of popular indignation which Canada has known for many years swept over the country; meetings of protest were held in many places, and papers supporting the Government joined with

the opposition Press in denouncing the order. Matters became worse when the sugar refiners, whose profits during the war years were notoriously large, issued a statement to the effect that they held very heavy stocks, and would face enormous losses unless they were protected in the market. The extent of their commitments argued in the public mind flagrant speculation, and the daring of the demand that they should be saved from speculative losses at the public expense excited immense public indignation. The Government bowed before the storm, suspended the operation of the obnoxious order, and agreed to allow the exercise of the right of appeal to the Cabinet-in-Council. At the hearing the majority of the Cabinet were present, and Mr Huntly Drummond, one of the leading refiners, presented their case. The refiners have on hand or under purchase due to arrive during 1920 over 366 million pounds of sugar, representing an investment of over 63 million dollars. If they have to meet the present United States competition at 15 cents per pound, their brief claimed that they would be faced with a loss of $19,600,000, sufficient to wipe out their entire capitalisation. It asserted that their profits since 1913 had been moderate, but, unfortunately, public opinion is not convinced on this point. The summary of their case was that they had been financially prejudiced in the past five years by governmental control, and have a just and reasonable claim upon the Government for relief. The consumer was protected in a rising market, and the trader should be protected in a falling one. However, at the conclusion of his speech, Mr Drummond intimated that the refiners would withdraw their objections against the confirmation of the suspensory order, and trust that justice would be done to their claims for redress by the Government. This sudden capitulation is taken to mean that they have received some secret promise of assistance from the Cabinet. It is known that one of the leading banks of Canada is heavily involved in the sugar imbroglio, and it is thought that the Government, fearing a financial crisis, may be planning some method of relief, possibly by making a temporary loan. The Premier, in announcing that the cancellation of the Board's order would be made permanent, gave no hint of any such course, and what was expected to be a fierce fight ignominiously petered out. If the Government had favoured the case of the refiners, they would have been unable to resist the re-establishment of wheat control and fixed prices for the benefit of the Western farmer. The stock markets have taken a very gloomy view of refinery shares, and there has been a serious slump in all of them. Atlantic Sugar, which sold at 115 on October 15th, had declined to 84 by the 18th, but subsequently made a partial recovery.

Sugar has obliterated another outcry against the freight rate decision. The Cabinet duly heard the appeal against the increase, and referred the matter back to the Railway Commission with a guarded intimation that some abatement should be considered. But it did not suspend the effect of the original decision, and is meeting with criticism in the Western Provinces on this account.

The Customs Department at Ottawa have lately revised their interpretation of their rules relating to valuation and exchanges in a direction which will greatly benefit British importers, and place them in a much more favourable position to meet American competition. Ever since exchanges began to fluctuate the Customs Department, disregarding strong representations and Press protests, has adhered to the policy that valuations of imported goods for duty purposes would be made on the basis of the par value of the Canadian dollar. The result was that an importer, if he purchased in Britain, had to pay duty on a valuation sometimes nearly 20 per cent. in excess of the actual cost in Canadian currency, and if he bought in the United States he often enjoyed a 10 per cent. abatement in valuation. The effect was the virtual obliteration of whatever value there was in the British preference. The Customs Department have now announced that this practice will be abandoned, and imports will henceforth be valued on the basis of the current rate of exchange with the country of origin. The new ruling will materially reduce the amount of duties levied on English imports, and increase the actual amount of preference accorded to Great Britain.

JAPAN. — REVENUE INCREASES — THE KOREAN TARIFF.

(FROM OUR CORRESPONDENT.)

Tokyo, October 5.

In spite of commercial and industrial depression for most of the past 12 months, the national revenue of Japan has increased beyond the official estimate; and after deductions are made for all outlays, the balance for the fiscal year 1919-20 is 626,000,000 yen. The fiscal year ended in August last. Total revenue for the period named was 1,803,574,550 yen, 744,385,000 yen more than the Budget estimate, and of about 330,000,000 yen over the actual revenue of the preceding fiscal year. Of this total 1,063,965,661 yen was ordinary revenue, an excess of 223,924,718 yen over the Budget estimate, and of 151,608,000 yen over the ordinary income of the preceding year. Extraordinary revenue reached 745,508,889 yen, a gain of 520,459,942 yen over the Budget estimate, and of 177,973,371 yen over the preceding fiscal year.

Most of the increase in revenue is from taxation, receipts from which amounted to 672,386,182 yen, an increase of some 179,584,191 yen above the Budget estimate. The most important taxes, and those showing the greatest gains, were on saké and income-tax. Dues on note issues form another important feature in the new taxation, and amounted to 8,243,530 yen, against a Budget estimate of only 896,257 yen. The item was more than 6,000,000 yen above receipts from the same source last year. It only indicates how note issue assisted inflation of currency in the earlier part of the fiscal year, before the financial crisis occurred. The increase in mining tax reflects the prosperity of that industry during the war, reaching 10,321,430 yen, as against only 8,838,987 yen for the previous year. Exchange dues showed a gain of no less than 50 per cent., rising from 9,000,000 yen to over 19,000,000 yen. As most of the more important gains are from fluctuating economic movements, they must be regarded as temporary.

Japan always depends much upon monopolies to enhance the annual revenue; but last year the profits from this source were rather disappointing. The total revenue from State enterprises and properties amounted to 251,548,107 yen, a decrease of some 8,477,807 yen as compared with the Budget estimate, and of 36,477,696 yen compared with the previous year. The heavy decline may be ascribed almost wholly to drop in trade after the war. Omitting import duties and coming to monopolies proper, there is a decline in profits from 89,515,556 yen last year to no more than 74,467,178 yen this year. This, too, is the effect of the rise in prices during and subsequent to the war. The most important item under the head of extraordinary revenue is war profits tax, from which Japan received 162,263,050 yen, or more by 69,637,701 yen than the year's Budget, and an increase of 80,673,705 yen over the previous year. Profits are also reported from the Shantung Railway and from State enterprise at Tsingtao. Another interesting item of revenue is that from foreign investments, amounting to 22,776,891 yen, or 5,667,730 yen more than the previous year.

The total outlay for the fiscal year amounted to 1,172,328,304 yen, an increase of 155,293,243 yen over the preceding year, and a decrease of 35,430,058 yen as compared with the Budget estimate. Of the balance of 636,246,227 yen, after all expenses have been paid, it should be remembered that much of it is earmarked for various appropriations. It is estimated that the net balance will not amount to more than 228,299,638 yen. In any case it has long been the custom of the financial authorities to balance revenue and expenditure from surplus alleged to pass over from previous budgets; so that one cannot always know exactly how revenue and expenditure actually stand. When it is realised that more than one-half of Japan's annual revenue is now being devoted to armaments, which must be regarded as unproductive expenditure, and that industry and commerce are passing through a critical period of after-war depression, with high prices and profiteering still raging everywhere, the economic condition of the nation is not quite so flourishing as figures for revenue might suggest. Nothing is said of the immense extra war outlay going on in Siberia, nor of how this is to be met.

The annulment by Japan, on July 29th last, of the old tariff in Korea revives a question of the "open door" and equal opportunity for occidental trade in the Far East, a matter of importance to both England and America. When Japan annexed Korea a decade ago some trouble was experienced in getting certain foreign countries to abrogate their commercial treaties with the Hermit Kingdom; and consequently Japan promised to continue the old tariff for ten years longer. This period having now expired, Japan has promptly supplanted the old tariff by that applying to the whole empire. The new schedule, needless to say, is more favourable to Japan's own, and less favourable to foreign, trade.

That Japan expected to see foreign trade so far eliminated in the ten-year period as to leave the West hardly able to notice the difference, and thus regard the matter as scarcely worth worrying about, we do not undertake to say; but that is just about the situation. The foreign trade of the peninsula has almost wholly passed into the hands of Japan, the share of other countries amounting to very little, except China.

The question of British interest in Korea was revived some time ago when the Under Secretary of State for Foreign Affairs admitted on the floor of the House of Commons that when the annexation of Korea took place, Britain agreed to the cancellation of her treaties without taking any steps to have the "open door" guaranteed, as promised in the Anglo-Japanese Alliance, first agreed to now eighteen years ago. In its original form the Alliance guaranteed the principle of equal opportunities for the commerce and industry of all nations in Korea. But British policy in the Far East appears to have much changed since then. America, too, not only went back on its treaty with Korea, but ignored the question of the "open door." Now the high tariff of Japan is to be applied to foreign trade in Korea, not including goods from Japan.

NORWAY.—TRADE—STOCK MARKETS—EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 27.

THE note circulation, having for a long time been continuously rising, last week fell by some 4½ million kronen, namely, from 479,220,000 kr to 474,624,000 kr. The gold reserve receded by a trifle, and now is 147,329,000 kr. It is not unlikely that the fall in the note circulation may be taken as an indication of a diminished activity having set in. The agitation for reduced consumption, import restrictions, and the general troubled outlook very likely have checked trade to some extent. The stock market moves in sympathy with that of other countries, notably with that of the neighbouring countries. A marked feature is the fact that even the very first-class bank shares are tumbling down—not on account of any real distrust of the solidity or standing of the banks. The general expectation is that the dividends will be reduced for the year, and then not a few people have to part with their shares in order to procure cash, bank credits being now difficult to obtain. Industrial and shipping shares are also weak, and on the whole lower. The general labour troubles have been settled for the time being by the arbitration court, but it is generally feared that the wages fixed by the majority of the said court will be too much for the industry when things become more adverse than at present. There is still one very important question looming large, namely, that of the railway men's claim, which was postponed early in the summer to be inquired into by a committee, whose report may now soon come up for decision.

The Storting has just met again for its autumnal session, and has to deal with a number of politicial and economic questions of far-reaching importance. Already a change in the constitution has been adopted whereby political coming of age was reduced from 25 to 23 years, a minority voting for 21 years. This will let into the political life a considerable number of new voters, and may cause no small change in the social life of the country. The Storting further will have to deal with important new schemes of taxation.

The high exchanges of sterling and dollars continue to throw difficulties in the way of the trade, though less now that there is a marked decrease of imports. The exports, mainly to Great Britain, of the staple articles from forestry, are suffering from various causes, the coal strike in England being one of the chief impediments to the exports.

SPAIN. — THE RIO TINTO STRIKE—GOVERNMENT LOAN OFFERED BY U.S. BANKERS.

MADRID, October 31.

THE director of the Mines of Rio Tinto, referring to the prolonged strike of the miners, has stated that there is great hope that before long the men will return to work. Two thousand have presented themselves out of 12,000. The workmen have also accepted the mediation of the Government, though they persist in refusing to send a commission to Madrid, and say that the negotiations should take place in Huelva—a condition to which the Government cannot consent. Since 1917 the workmen have received several increases in wages, while the company also continued to supply to their employees through their stores food stuffs at the same prices as before the war. In 1919 an agreement was drawn up between the representatives of the company and the miners to last for five years, but after three weeks the workmen went on strike. In April of this year the men returned to work after the company had granted further demands. Then in June they demanded a wage increase of from 45 to 80 per cent., giving the company five days in which to grant their request. This time being too short to allow the company even to study the question, they went on strike, dragging with them the office employees, railway men, &c. One of the requests of the Rio Tinto strikers is that the company should suppress their stores. They also petitioned the Government to raise the price of bread in order that there should be competition of prices between the bakeries. The company agreed to sell the goods in their stores at cost price, and to grant an increase of 2.25 in the wage of each workman. The lowest wages of a Rio Tinto workman is that of five pesetas 25 centimes a day, and the medium wages are from seven to ten pesetas. The increase in wages costs the company five million pesetas a year. The Rio Tinto shares that were quoted at two thousand pesetas three years ago are now worth seven hundred.

An important New York banking association has offered to provide the Spanish Government with a loan of 25 million dollars to be amortised in 25 or 30 years. Though the offer was attractive, the Spanish Government has not accepted it, the Minister of Finance not intending to create any new external debt. It appears that the interest on the proposed loan was to have been 8 per cent.

Letters to the Editor.

INDIAN CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of September 11th I find Mr "F. W. S." criticising my letter published in the *Economist* of August 28th.

I am afraid Mr "F. W. S." does not quite grasp the intricacies of our artificial currency system. He says the rupee will still remain legal tender for debts in India, and so would infer there was no injustice done to any one. Let me point out that the Chamberlain Commission has authoritatively laid down that the gold standard had been firmly secured for India, and that in the Indian system the rupee was only a token.

The next thing we have to bear in mind is that as the rupee was a token for so much gold (7.53 grains), every debt or contract, even internally, was really a contract to pay or receive so much gold. The producer had no rupees in the bank. He had to find the rupees by selling his produce. The rupee that stood for 7.53 grains of gold is now to be made to stand for 11.30 grains. The producer in order to meet his dues to the Government and the sowcar has to find rupees. It is clear that to get 11.30 grains (one rupee) the producer must part with

50 per cent. more produce than he would if he had to find only 7·53 grains. This is the injustice to India's producer that I am complaining of. I have called the thing a debasing of the currency. Mr "F. W. S." does not understand why. I will try to put it differently. Mr "F. W. S." is no doubt aware that all debasing of currency is condemned, because it vitiates the relation between debtor and creditor, and thus operates as a fraud on one of the two parties to a contract. India's producer has millions of such contracts with his sowcar. I believe the total indebtedness of the agricultural population must be in the neighbourhood of 5,000 million rupees. Now let us see what happens in a concrete case, where, say, P., a producer, owes 100 rupees to S., a sowcar. P.'s liability really amounted to finding 753 grains of gold. If P. wanted to defraud S. he would lower the figure in the promissory note. On the other hand, if it was S. that wanted to defraud P., he would change the figure of 753 to a higher figure. In either case it would be forgery and fraud, and the party that did it would get seven years for his pains. But here our benign Government saves S. all the trouble by itself making the change from 753 to 1,130 by legislative action. It is a fraud none the less on the producer P.

Money contracts are in terms of the principle currency in circulation. In this unfortunate country they are all in token money. In England they are in both standard money and token money. All ordinary debts are expressed in standard money, *i.e.*, pounds and its fractions, but sale contracts in many trades are expressed in tokens, *e.g.*, wheat at shillings per quarter, cotton at pennies per lb, and so on. In both these articles there are enormous amounts pending on contracts for forward delivery. Let us take a contract for 1,000 quarters of wheat at 80s. It will mean a total consideration of £4,000. Let the English Government then by legislation change the relation of the token shilling to the £ by laying it down that hereafter only 15s be reckoned to the £. The above contract would then mean that the seller should pay $\frac{80,000}{15}$, say, £5,333, for the same 1,000 quarters. Would such a change in the ratio of your token to your £ be tolerated for a moment?

The wages in most trades are fixed in shillings per hour, day or week. An employee who was engaged on 10s a day would be getting at the end of the week, say, 60s, or £3, but with the changed ratio he would get £4. Would this be tolerated?

Our rupee is our Indian shilling, and the change from 15 to the sovereign to 10 to the sovereign is of the same kind as from 20s to the £ to 15s to the £. Both are equally wrong. Money is a standard measure like other measures, and no Government has any right to change a standard measure so as to vitiate all existing contracts. I hope the position is now clear to Mr "F. W. S."—Yours faithfully, B. F. MADON.

Bombay, October 8th, 1920.

P.S.—It is claimed for the change in India that it cheapens prices and is a great boon to the poor. This is a fallacy, because while the number of tokens are fewer the amount of standard metal (gold) represented by these fewer tokens remain the same. In other words, while the token price looks lower the gold price is not lowered. To again illustrate it by the above instance, the present shilling loaf mean twenty loaves for the £. After the change to 15s equalling £1, there will be 20 loaves obtainable for the same £, which would now stand for 15s, *i.e.*, the shilling loaf will be quoted at 9d. If such jugglery could reduce high prices, why don't they try it in England, where they suffer far more from the evils of high prices than we do in India?

LOSS THROUGH THE STRIKE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It has been stated in certain Manchester and Liverpool morning and evening papers that, as a result of the coal strike, the colliers have lost over £8,000,000 in wages, and the value of coal lost is over £7,700,000. Recognising that the £8,000,000 which the colliers have *not* received during the time they were out was in active operation in other channels, and that the millions of tons of coal not gotten are not lost, and that the energy requisite for getting the coal, &c., has been conserved, will you kindly give an analysis exhibiting such stated loss? Also, it would be edifying to learn how the community have suffered in consequence of mine owners being deprived of royalties, &c., during the stoppage.—Yours, &c.,

FRED GARLICK.

Southport, November 2nd, 1920.

[The loss to the miners is measured by the extent to which they have had to draw on their funds instead of receiving wages in return for rendering a valuable service. The loss to the community is the lack of the heat and energy which the coal, if produced, would have generated. It is true that the coal is still there, and will produce benefit some day, but the present lack of it is none the less a loss.—ED., *Economist.*]

Books and Publications.

REVIEWS.

"Mind and Work." By Charles S. Myers, F.R.S. University of London Press, Limited. 1920. 6s net.

THIS volume offers what is only too rare—an extremely lucid exposition by an expert of the first rank of the chief lessons which his science has to teach. Dr Myers summarises the main results of psychological research on the subjects of motion study, industrial fatigue, vocational selection, restriction of output, methods of payment, and industrial unrest. In no case does the author claim for his science an authority which it is not yet competent to wield. He does, however, indicate the importance of its future, and he regrets the antipathy with which improvements based on psychological investigation are often regarded by both employer and employed; though he states with sympathy and impartiality the genuine objections of both parties. Thus he repeatedly insists on the importance of adequate safeguards for the worker who becomes unemployed through no fault of his own. In his own words, "There are two fundamental conditions demanded by the workers which must be satisfied at the outset, viz., security against unmerited unemployment, and a share in management, and unless these are established, further appreciable progress is impossible."

"The Statesman's Year-Book." Edited by Sir John Scott Keltie, LL.D., and M. Epstein, M.A. (London) Macmillan and Co., Limited. 20s.

THIS statistical and historical annual gives a very comprehensive record of the affairs of practically every country in the world. It is now in its fifty-seventh year of publication, and this, the latest edition, has been revised and brought up to date according to the provisions of the various peace treaties. Preliminary results of the Austrian census held on January 31, 1920, are given. The maps included in the book show the changes in the Near East and the re-arrangements in Africa. All the Army sections have been revised by General Sir Frederick Maurice.

This is the second edition of "The Dunlop Book." It has been revised and enlarged with numerous new illustrations. The 32 coloured touring maps of the British Isles which are included, and the 700 pages of matter, the whole bound in red morocco, make the volume remarkable value at the price of one guinea.

Manuel des Sociétés Anonymes Helléniques, 1919. (Athens) Bank of Athens.

A useful list of Greek companies.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
November 11.	November 12.

The sense of relief felt by the result of the coal strike ballot, and the advice of the leaders to the men that the latter should resume work, has been a little chastened in the Stock Exchange by the actual figures of the voting. It is regarded by members as a disappointment that the majority should be in favour of continuing the strike. This being the case, permanent settlement of the dispute is considered uncertain, and instead of being able to look forward to a reasonable period of peace in the labour world, there are still elements of disturbance which may make themselves felt again before long. Evidently this is the impression amongst investing classes throughout the country, judged, that is to say, by the paucity of good business in stocks and shares. The House is busy enough with small orders; some brokers say, in fact, that they have seldom been busier, except during a boom, but the quality is not up to the quantity, and, from the standpoint of remuneration, it does not pay to deal with a large volume of buying orders that involve sums of money which might be more appropriately put into National Savings Certificates. On the other hand, many members regard it as a cheerful omen that the smaller investor is taking an interest in the markets, and if the present coal arrangement works smoothly, they point to the possibility of markets becoming normally active again.

The War Loan gave way a little, partly on the issue of the new Metropolitan Water Board stock, partly on the idea that, with trade resumed, capital will be required for ordinary business purposes. The new Local Loans stock has firmed up to within $\frac{1}{8}$ of the par price of 50. Other gilt-edged stocks are steady, without showing any particular tendency other than this. In the foreign market, Chinese, Chilian, and Brazilian bonds stand out as the three firmest groups, investors evidently being attracted into these securities by reason of the prospect of improvement that the prices hold. The market in French bonds is very quiet, and German Threes have fallen away, owing to the pessimistic speech recently made by the Imperial Chancellor concerning the present financial condition of Germany.

The Home Railway market is one of the hardest round the House. The Heavy stocks, North-Westerns, Great Westerns, Midlands, and North-Easterns advanced materially, on a little pressure to buy. The hand of the small investor is evident here, and with the dividends for the "fat" half-year coming into view, the stocks are being steadily absorbed. Sympathetically, the rest of the market has hardened. The result of the United States Presidential election in America has had the effect of causing further advances in American Rails. Business, naturally, is on the smallest possible scale. Canadian Pacifics are higher, Grand Trunks neglected, and Mexicans also dormant, in spite of the reasonably good traffics which the Mexican Railway Company is publishing week by week. Argentine stocks have been firm, more particularly Centrals and Buenos Ayres and Pacifics, the prices of both of which carry the dividends recently declared. Brazilian Rails are also a little better with Brazilian Government bonds.

Rubber shares continue flat, owing to the price of the produce having gone down to another low level, and it is only the bargain-hunter who keeps interest in this market alive. "Cuts" in tyre prices are scarcely a bull point for the rubber market, and there is still uneasiness in regard to speculative accounts, which are declared to hamper the price of the raw produce. Oil shares have been somewhat erratic, with business less active. A few of the lower-priced shares shot up; amongst them, Scottish Americans were prominent. The leaders, however, were disposed to ease off towards the end of the week. The pyrotechnical sensation of the week was afforded by a jump of 55 points on Wednesday in P. and O. deferred, on the declaration of a dividend, making £15, free of tax, for the year, as against £12 for last year. This had the effect of strengthening shipping shares generally, coming as a pleasant surprise to those who had been apprehensive that the shipping industry is undergoing a very bad time, owing to the fall in freights, plus competition of newly-built boats. In the textile market, Coats spurted on dividend anticipations, but the price fell sharply on the announcement, the bonus being considered disappointing. Other textiles have been somewhat coloured by the movements in Coats.

Postponement of the interim dividend on Godfrey Phillips "B" preference led to heaviness amongst tobacco shares. In the hotel group, Fredericks are better on the report recently issued, and in catering shares there is no outstanding feature. The cable group is better, the inference being that the talk of additional income-tax next spring is arousing attention to shares upon which dividends are paid free of tax. The banking market is surprisingly quiet, but the insurance list has hardened again, and there is once more a distinct tendency to invest money in the shares. Nitrates are another good spot, the recent Aguas Blancas dividend arousing hope that other nitrate producers are also doing well. The Rosario Nitrate Company proposes to split its £5 shares into shares of £1, which would tend to give greater flexibility to the market. Various land shares are good, Forestals being noticeable. Gas stocks and electric lighting shares maintain their prices, the market in the former being somewhat bare of floating supply. Iron, coal, and steel shares kept to the firm side, without, however, developing any approach towards buoyancy, while Armstrongs and Vickers did no more than barely maintain the improvements established last week.

Kaffir shares are generally better, and it is said that some of the buying which has helped to raise the prices of Rand Mines and Central Mining owed its inspiration to New York. The price of gold is close upon £6 per ounce, and dividend expectations run high, owing to the price which gold has averaged during the current six months. The Rhodesian market is listless. Chartered failed to derive any benefit from the recent meeting, and in other Rhodesians there is not much doing. The Paris market has been scarcely a factor this week, owing to the holidays. A few of the leading tin shares are a little better, and De Beers rallied to a moderate extent. The gamble in Esperanzas seems to be over for the time being, the latest cables tending to show that the sensational strikes recently reported cannot be regarded as likely to prove permanent. Russo-Asiatics keep firm. Burma Corporation debentures have hardened to 11, although the shares of the Corporation are dull. Broken Hills have braced up on the news that the men's association have approached the companies with a view to resumption of work.

Stock Exchange shares at 104 are ex the dividend of two guineas nett distributed last Tuesday.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. Holders of Exchequer bonds maturing on December 1st are given the privilege of using their bonds ex dividend as the equivalent of cash at par as on November 18th for the purpose of subscription to Treasury bonds, in addition to receiving a full six months' dividend on December 1st on their maturing Exchequer bonds. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

The Treasury give notice that, the Bank of England having certified the average rate of discount at which Treasury bills were issued to the public during the half-year ended the 1st instant to be 6½ per cent. per annum, additional interest at the rate of 2 per cent. per annum (making a total of 7 per cent. per annum) will be payable upon Treasury bonds 1935 on the next interest date—viz., May 1, 1921.

Metropolitan Water 5½% (C) Stock, 1929-1939.—Repayable at par on November 15, 1939. Issue of £2,500,000 stock at £92 per cent. Interest payable on May 15th and November 15th of each year. The Metropolitan Water Board give notice that they are prepared to receive at the Bank of England applications for the above stock, which will be consolidated with the £2,500,000 Metropolitan Water (C) Stock previously issue. The proceeds of the issue are required to meet further expenditure in connection with the construction of reservoirs, filter beds, engine houses and machinery, extension of mains, and other authorised purposes. The stock must be redeemed at par not later than November 15, 1939, but the Metropolitan Water Board reserve to themselves the right on giving three calendar months' notice to redeem at par at any time on or after November 15, 1929, any outstanding balance not previously purchased and cancelled by the operation of the redemption fund. This is a trustee security.

Selfridge and Co., Limited.—Authorised capital £3,550,000, of which £1,844,493 has been issued. There are also 5 per cent. debentures outstanding for £325,500. This is an issue of 1,000,000 10 per cent. cumulative preferred ordinary shares of £1 each at par. These preferred ordinary shares rank immediately after £1,300,000 of 6 per cent., free of income-tax, cumulative preference shares. The company was established in 1908, to carry on the business of general merchants, and the store in Oxford street, London, was opened in March, 1909. Net profits are given from 1912. The company has recently largely extended its trade in the provinces, having acquired a controlling interest in companies carrying on business at Brighton, Gloucester, Leeds, Liverpool, Northampton, Peterborough, Reading, Sheffield, St Albans, Watford, and Windsor. The company also holds all the shares in John Quality, Limited, a company carrying on a provision trade, mostly in the suburbs, which has already opened 11 branches, and also of T. Lloyd and Co., Limited. A favourable point is that the whole of the ordinary shares, amounting to £500,000, are held by Mr Gordon Selfridge, and on these the dividend for the year 1920 was 10 per cent., free of income-tax. The present issue is reasonably well enough secured to make the terms attractive.

Mappin and Webb, Limited. — Authorised capital £1,500,000, divided into 600,000 ordinary shares of £1 each, and 900,000 8 per cent. cumulative preference shares of £1 each. Including the present issue, 400,000 ordinary and 650,000 preference shares have been issued. There is also outstanding a 4½ per cent. debenture issue of £250,000, against which a sinking fund of £28,753 exists. This is an issue of 200,000 preference shares at par and 200,000 ordinary shares at 22s per share. The company was formed in 1908 for acquiring the private company of the same name, which carried on a business of jewellers, silversmiths, &c. Profits are shown from 1909, and a statement is submitted showing surplus assets to be worth £1,017,171, including the proceeds of the present issue, but making no allowance for goodwill, which is apparently valued at a low figure. This is a progressive British manufacturing concern, with a well-spread network of branches in many countries. The prospectus is a clear statement of affairs, with the exception, perhaps, that the investor would like to know the basis of valuation of the item, "Investments in subsidiary and connected companies," at £223,240. Both classes of shares are a reasonable offer. The preference shares are well secured, and the ordinary shares a fair industrial risk.

Arding and Hobbs, Limited. — Authorised capital £250,000, divided into 75,000 7 per cent. cumulative preference shares of £1 each, 80,000 8 per cent. cumulative preference shares of £1 each, and 95,000 ordinary shares of £1 each. The issued capital amounts to £145,007, exclusive of the present issue. There are now offered for subscription, 80,000 8 per cent. preference and 20,000 ordinary shares at par. The company was formed in 1912 with a nominal capital of £150,000, to acquire the drapery, furnishing, and outfitting business of Messrs Arding and Hobbs, of Clapham Junction, London. Profits are given from 1914. The statement of assets and liabilities is clearly set out. Property is taken at a valuation made in 1912. Goodwill is shown as at £23,115. Against a total issued capital of £245,007 there will be assets worth approximately £287,000, including goodwill at the above figure. The prospectus is a reasonable statement of affairs, but two unusual items call for notice. The first is that after a dividend of 10 per cent. has been paid on the ordinary shares, surplus profits are divisible between ordinary shareholders and directors, and the second is that the articles of association provide that, with the exception of paying off mortgages, the company shall not "borrow money on the security of the undertaking" without the sanction of preference shareholders. The preference shares are decidedly well secured both as regards dividends and capital, while the ordinary shares are a good offer of their class.

Goldsbrough, Mort, and Co. — Authorised capital £1,000,000, in ordinary shares of £1 each, of which 773,010 shares have already been issued. This is an issue of 226,990 shares to shareholders at the price of 25s for each £1 share, in the proportion of one new share for every five shares held. According to the balance-sheet of the company for the year ended March 31, 1920, surplus assets were worth £1,489,457, against an issued share capital of £773,010. Thus the shares at 25s each are well covered, and there is a wide margin of security. As the current quotation for the old shares is round about 1⅞, shareholders are offered a substantial bonus in this offer of the new issue at 25s per share. Last year's dividends were at the rate of 10 per cent. per annum and an additional bonus of 5 per cent.

Southend Waterworks Company (Incorporated).—Authorised capital £1,220,000, of which £699,421 has been issued. There is also an authorised 4 per cent. debenture issue of £363,333, of which £158,158 has been issued. The raising of loan capital is limited to one-third of the share capital. Sale by tender of £42,000 8 per cent. redeemable debenture stock. The minimum price of issue has been fixed at par. These debentures are to be redeemed on September 29, 1935. The net revenue of the company for 1919 amounted to £29,089, and the total interest on debenture stock, including the present issue, will amount to £9,404. The ordinary shares received a distribution of 3⅜ per cent. per annum. Dividends were affected by the war. In the official Stock Exchange list the 5 per cent. maximum dividend new ordinary £10 shares, fully paid, are quoted at £2 to £2½. The low price of these shares is a surprising matter, and investors would be well advised to consider other offers which have more attractions.

Adolph Frankau and Co., Limited.—Authorised capital £184,000, divided into 142,000 cumulative 5½ per cent. preference shares of £1 each, and 42,000 ordinary shares of £1 each. The whole of the ordinary capital and £117,000 of preference capital has been issued. There are also 6 per cent. debentures for £26,944 outstanding, holders of which are offered the choice of converting into this issue or being paid off. This is an issue of £75,000 8 per cent. mortgage debentures at 97½ per cent., being part of an authorised issue of £100,000. They will be "repayable" at par on September 1, 1940, unless previously redeemed by pur-

chase or drawings. The directors reserve the right to redeem the whole issue after October 1, 1922, at 102 per cent., on giving three months' notice. The company was formed in 1899 to take over a well-known business of pipe manufacturers. Profits are given from 1910, but these are shown before making provision for many items. Surplus assets, including the proceeds of the present issue, but exclusive of goodwill, are given as £218,712, but this statement cannot be considered sufficiently informative for debenture holders. These will be more concerned to know the value of individual items, and in particular to learn the value of the property which will be specifically secured by the trust deed. In the absence of this information it is impossible for us to recommend the issue.

The Granville Picture House, Limited. — Authorised capital £15,000, divided into ordinary shares of £1 each, of which 12,500 are now offered for subscription at par. The company has been formed to acquire the "Windsor Halls" at Great Western road, Glasgow, and make "such alterations as are necessary to construct a first-class picture house." The purchase price is fixed at £15,000, of which £12,500 is payable in cash and the remainder in shares. The prospectus states that "it is proposed to arrange a bond for £5,000 over the property." The company will pay preliminary expenses, estimated at £700. No valuation, independent or otherwise, appears in the prospectus. The issue is not underwritten. These shares will appeal only to those with an intimate knowledge of the directors and local conditions.

COMPANY MEETINGS, &c.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.

THE SUMATRA PROPOSITION.

INCREASE OF CAPITAL APPROVED.

THE HON. CHARLES HEADLEY STRUTT ON THE COMPANY'S PRODUCTS AND MARKETS.

The tenth ordinary general meeting of the shareholders of the Anglo-Dutch Plantations of Java, Limited, was held, on the 4th instant, at the Cannon street Hotel, London, the Hon. Charles Hedley Strutt (chairman of the company) presiding.

Mr P. H. Bradford, representing the secretaries (Messrs Francis Peek and Co., Limited), read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with cheers, said: Ladies and Gentlemen,—I wish to apologise for the absence of Mr Hammond on this occasion. He was anxious to attend and place his views before the shareholders himself as to the lines on which the Anglo-Dutch Company should be conducted in the future. He had booked a passage to Java for the middle of October, and when it was found impossible to hold the meeting before that date, I impressed on him the desirability of taking the offer of a berth when available and proceeding to Java, where his presence is almost of vital importance owing to the need of holidays by the chiefs of our staff on the lands. I am sorry to say that in the last day or two Colonel Sir Robert Williams, Bart., M.P., has lost a near relative, and the funeral taking place to-day, he is very sorry to be unable to attend this meeting. Possibly I ought to apologise also —as I have done on the last two or three occasions—for the lateness of the meeting. We always find, when the time comes, that something has occurred which prevents the meeting being held at an earlier date. This year it has nothing to do with London, but owing to our secretary in Java taking up a new post, our accounts were delayed, and were not forwarded to London so soon as we might have wished. I have impressed very strongly on Mr Hammond, and I am sure he has done the same on the staff out there, the necessity of having the accounts over earlier than they have been during the past two or three years.

I have no doubt that you have scanned with interest the balance-sheet of the Pamanoekan and Tjiassem Company, and have noticed the way we have dealt with the money we have received from the expropriation. The directors had no scruple in stating that the value of the estates left to us is more than our share capital, but then it must be remembered that our shares do not stand at par.

DIVIDENDS—IMPROVED POSITION.

Owing to the large reserve fund which we possess, we are able this year, and shall be able in future years, to divide practically up to the hilt the profits made on our estates. This has not been possible in the past. Before the expropriation was an accomplished fact, we were obliged to keep sums back in case the money might be required for financing our estates. This year we have gone even farther—actually reducing our carry-over. We thought the shareholders had been waiting so long that they were entitled to as good a dividend as we could afford them on the present occasion. We have no reason to believe that the profits from the culture estates during the current year will be on a much lower scale than in 1919. In fact, we hope to pay you next April an interim dividend, as we did this year. We shall, however, have a larger number of shares to participate in those profits as from October 1st of this year, and we are faced with a large increase of taxation in the shape of corporation tax and excess profits duty. We think there is very small risk of our having to pay excess profits duty on the accounts before us, but in 1920 we shall most likely have to yield some of our profits. The shareholders should be thankful to Mr Bradford, our acting secretary, for the great care and knowledge with which he has dealt with this question of taxation.

DIRECTORS' REMUNERATION.

In the accounts there appears a large sum as extra remuneration for directors. This is in accordance with the articles of association, and this is the first time that the directors have received any additional remuneration. I hope the shareholders will not grudge us even this large sum after ten years of hard work and unremitting attention to their interests. I may say that one shareholder has written asking why the income-tax is not deducted. Of course, the company has not to pay income-tax on this money which is paid to us—the directors will have to pay it themselves. The loss to the company is not, therefore, quite so great as the amount would appear at first sight, because if it remained in the coffers of the company, income-tax, and any other tax that might come along, would have to be charged against that sum, so that the shareholder is quite wrong in thinking that the directors are saved from paying their share of taxation, which, of course, they ought to pay.

CHAIRMAN'S VISIT TO JAVA.

My visit to Java last autumn was, of course, the first I had made to the lands since we had been shorn of a great deal of our power and two-thirds of our lands. Superficially, things seemed altered but little—the rice fields had always been cultivated by tenants, and the only difference is that they now hold them direct from the Dutch Governmen and not from us. It was pleasant to note that almost the whole of the staff, which had carried on that part of our administration which dealt with our districts as apart from our culture estates, were desirous of continuing in our service, and were transferred to our culture estates by our representative. Some of these men are now doing excellent work—their knowledge of the workings of the native mind enabling them to accomplish a great deal in the way of satisfactory development of our new plantations.

LABOUR SITUATION.

The Pamanoekan and Tjiassem lands have always produced more rice than was required for their own needs, and, consequently, the high price has been, till lately, an advantage to them. While I was in Java there was a sufficiency of labour—our policy of providing good and cheap rice for the coolies, coupled with our all-round fair treatment, made our estates popular with outside labour, so that thousands have been attracted to the lands to help in the work of developing our new plantations. The desire to be still in a position to do this was strong enough to induce Mr Hammond and myself to buy back the rice mill from the Dutch Government. They were offering it in the market, and we thought it far more advisable that the mill should revert to us than that it should fall into the hands of a Chinaman who might squeeze the natives to any extent. We shall now be able to buy the paddy from the native cultivators, and sell it again to our working coolies with no desire to make a profit on the rice mill, but rather to ensure the provision of cheap and good rice to our employees. Since I left the estates, however, scarcity of labour, for almost the first time during the past eight or nine years, has begun to make itself felt. The tenants of the rice fields and their families had a good crop last year, and the high prices they obtained for it have tended to make them far less inclined to help us by working on our culture estates during their periods of abstention from their own plots as in previous years. In addition to this, at times of planting and harvesting the rice they compete with us themselves for outside labour.

DEVELOPMENT WORK.

We are employing a large quantity of labour. In the first place we are developing largely, as evidenced by our having opened out 1,388 acres in 1918, 6,104 in 1919, and about 5,000 acres this year if we carry out our full programme. We have entered on a large scheme of terracing, which requires a considerable amount of extra labour, while there is another factor which tends in that direction. Visiting agents at the present time are decreasing the number of trees tapped per coolie in order that an improved standard of work may result. I hope this diminution of trees tapped per man will not be carried too far. It was very pleasant to find the cordial relationship existing between the Government, from the Governor downwards, and our representative. The Government, as you know, have erected their principal aerodrome on our lands at Kalidjati, and it was here that Ross Smith landed on his way to Australia. Mr Hammond had the pleasure of entertaining him at Soebank on that memorable occasion.

The road from Kalidjati to Passir Boenger Railway Station has for some years been in a bad condition. The Government determined to put an end to this unsatisfactory state of affairs, and we have subscribed a substantial sum towards the cost of making the new road. This has to some extent temporarily drawn off the labour from our lands, but as we have a good road from Soebank to Kalidjati the continuance of it to the railway station will be a

great advantage in effecting the better control and supervision of our estates. We have here the largest estate on our lands, Passir Boenger, and also a large number of new estates.

NEW SYSTEM OF ADMINISTRATION.

Mr Daukes, as well as Mr Hammond, has also been in Java during the past year, and when we were all three there we had many discussions as to the future administration of our properties. We have, at the present moment, divided our organisation into two groups—one for the management of the Hill property, centred at Tenger Agoeng under Mr Valette, and the other, for the lowlands, under Mr Adams, who has lately come out to Soebang from the Straits. Possibly the lowlands may have to be subdivided later on. Other questions which engrossed a good deal of our time, and called for close attention, were the salaries and emoluments of our managers and assistants, and also our future treatment of the coolies. The rise of prices—for the rise has not been confined to the West—has necessitated a change in our former payments, and although we had always granted pensions to men of our staff who had worked long and loyally for us in the past, we then went thoroughly into the matter in order to place it on a more substantial and permanent basis. It is unfortunate that in receiving extra emoluments such as pensions our employees do not, I fear, at times, keep them sufficiently in their purview when questions of salary come up for consideration.

TREATMENT OF NATIVES.

Although our responsibility for the whole of the native population has now ceased, we still feel that it is very desirable that those natives who still work for us should be treated as well as possible, especially those who work for us regularly. What they most desire is cheap food, and by buying the rice mill we hope we shall be in a position to place them on a better footing than natives elsewhere.

Secondly, we are building a better type of house and endeavouring to supply these houses with good water. Thirdly, we shall, as far as possible, institute markets near their homes, while lastly, for the younger generation, we shall start both technical and agricultural schools, which will enable us to supply our workshops with good mechanics, &c., in days to come, and our estates with more or less trained agriculturists, at the same time affording to those native boys who are more intelligent and persevering than their fellows a chance of improving their status.

NATIVES' APPRECIATION OF COMPANY'S MANAGEMENT.

Before I leave the subject of labour, I must briefly refer to what took place when we handed over our expropriated rights and lands to the Government. I am sorry that there was no accurate report of the speeches made on the occasion when the natives were informed of the change. Not only did the representatives of the Government say kind and generous words as to our management when in possession and control, but everywhere the natives expressed publicly their deep regret at the close of the relationship between us and them. I cannot conceive of a greater compliment to our representative than this concert of praise from all quarters. I am fain to confess that I did not see as much of the estates on my last visit as on the previous occasions. The many questions urgently requiring discussions, such as future policy, management, extensions, both in Java and Sumatra, &c., precluded my touring round extensively, and seeing for myself, as in past visits, while there seemed to be a conspiracy to save me from over fatigue, with the result that I did not see everything as completely as I wished.

TEA CROP—A RECORD.

Our tea crop was a record one, the crop of 2,322,301 lbs being the largest we have ever plucked on our estates. The cost of production shows an increase over that of 1918, which, in turn, costs considerably more than the 1917 crop. I am afraid it will be very difficult in future to bring our costs below 5d per lb. The price we obtained was satisfactory, being 8.37d—2½d more than in 1918, but only ½d more than in 1917. Thus the tea has contributed largely to our profits during the past year—more than in either of the preceding years. Our crop for 1920 we sold in advance at an extraordinarily fine price compared with that ruling at the moment. Unfortunately, as generally happens, when the buyer has bought at a price at which he cannot recoup himself by resale, there have been a great many appeals—I am not saying unfair ones—as to the quality of our Kassomalang tea, in consequence of which a considerable quantity has been thrown on our hands at a time when we have a thoroughly disorganised market. The price now being given in London for the worse grades of Java tea is not sufficient to pay the freight on it. Such a slump in a commodity price has rarely been witnessed in so short a space of time. This, to my mind, is due principally to two causes. First, that Europe—especially Russia—is practically out of the market; and, secondly, the shortage of cash and restricted credits all over the world have been unfavourable for the holding of stocks. In consequence, everyone is desirous of working from hand-to-mouth more than in normal times. Neither of these causes can be looked upon as permanent, but how long they are likely to last is very difficult to forecast. At the moment retail prices do not seem to have followed wholesale as rapidly as might have been desired. The 1920 crop on our estate, so far, shows a small falling off as compared with 1919. One of the reasons for this is that the labourers, as I mentioned before, have not been so keen to come to us for work. I also expect that the manager has plucked more finely in order to prevent the declinature of the tea tendered against the forward contract. Possibly, also, more tea has been put under the pruning knife, with a consequent diminution of crop. There was an extension of 476 acres of tea in 1919. I had great pleasure in going over one of these extensions in Sariredja, where some Liberia had been cut down, and the whole area converted into a fine tea estate. Unfortunately, in this zone—which embraces Kassomalang, I may mention—there is always a scarcity of labour when the natives are either sowing or reaping their paddy. There is no doubt that our local labour here is not sufficient. It is hoped that our new building programme will attract fresh labour to this district. We want men with families.

CONSUMPTION DEMANDS.

Tea is now passing through a bad time—very different from last year—but I still do not consider that the quantity of tea grown in the tropics is more than sufficient to meet in the long run the ever-growing demands of consumers. Our planting programme for 1920 provides for 212 acres of tea, but no further extensions are contemplated at present. Since my return we have had the fortune to have our tea estates visited by one of the principal Assam tea planters. He has told us that in field work our management is splendid, and not to be bettered. He, however, thought our manufacture could be considerably improved. We have accordingly arranged that our principal tea manager should shortly visit some Indian tea factories. In these days of low prices we must not miss any opportunities of improving our products.

CINCHONA.

Our cinchona, or quinine, did well last year. It cost a little less than in 1918, and fetched 3½ cents more. This is disappointing. We still have some 1,000 acres or more which we consider will grow cinchona profitably, but on some of the land we have already planted the growth is scarcely good enough to enable us to obtain as large profits as we should like. I look to the rich lands of some of the Sumatra concessions to carry on this important culture. In 1919 we planted up 357 acres in cinchona, and we propose to plant 159 acres in 1920, of course, in Java. There is still a great demand for quinine, and it is very desirable that we should lose as little time as possible in growing what we can, otherwise attempts may be made to grow it elsewhere on a large scale, which, although most likely unsuccessful from a commercial point of view, may yet tend to make the crop unremunerative to all producers for a considerable period.

COFFEE.

Our coffee production has shown a regular decline. This is owing to the cutting out of the interplanted coffee planted in 1910-11—the year when we undertook large extensions of interplanted robusta and hevea. The cost price, owing partly to the smaller crop, has risen 3s per cwt, but the price obtained has risen 13s 9d per cwt, consequently the profit is increased from £8,588 to £11,027 19s. In 1919, 3,718 acres of coffee were interplanted with hevea. We have planted no coffee by itself. From some of these interplanted areas we do not expect much in the way of a coffee crop, but owing to the high prices prevailing until lately we have put in as much as we dare, but there is little doubt that some of it, where the land may not have been sufficiently drained, will have to be sacrificed later on. Unfortunately, last year our bibit, or plants from the nurseries, were small, and not ready to plant out sufficiently early. The chief cause for complaint I found on the estates was this backwardness of the nurseries. It is a great element of success in all tropical products to have the plants from the nurseries sufficiently advanced in growth for planting out early. A coffee nursery is a beautiful sight when cultivated on the principles of the best Dutch managers. Fortunately for us, we have experienced late rains this year, which have to a very great extent made good the handicap of the small bibit and consequent late planting last year. In fact, we have heard from our managers that, with the exception of a very small acreage of coffee, the plantings of all our cultures in 1919 look extraordinarily well.

We are planting 2,534 acres of coffee-rubber in 1920, but we cannot look upon the Pamanoekam and Tjiassem lands as first-class for the coffee. The Western Coast of Sumatra, with its better climate, will produce far better crops, in my opinion, on carefully selected soils. You must remember that our soil on the lower lands—and it is here that we have most room for extension—is, on the whole, not first-class planting land, but, given a plentiful supply of labour and good organisation, we can on

most cultures hold our own. However, the cost price of our coffee, owing to smaller crops, must always compare unfavourably with that of coffee produced on the inherently richer soils of East Java and Sumatra, with their better climatic conditions.

RUBBER.

Rubber takes pride of place in 1919 as a profit-earning industry among our varied products, though rice is not far behind. The increase of output is very satisfactory. The estimate of 1,859,680 lbs has been exceeded by 245,515 lbs, while the cost of production has been reduced to 10½d per lb. This cost includes two items—depreciation and bonuses to managers and assistants—which had not been taken into account when I ventured to predict last year that the price would fall to 8½d. As a matter of fact, these extra charges against the crop account very nearly for the cost being 2d higher than I had anticipated. There is one thing which the shareholders must always remember—viz., the higher the profit on any products, the larger is the bonus which the staff will enjoy, and, consequently, as far as this item is concerned, the larger the profit, the larger the cost, and what may be considered of more importance at the present moment, the smaller the profit, the smaller the cost. The whole of the 1919 crop was practically all sold f.o.b. Batavia for the moderate price of 1s 8d. This year our estimate is for 2,600,000 lbs. Up to the end of September we have obtained 1,887,408 lbs, and now that restriction of output is adopted, we can scarcely expect to reach our estimate. We have planted 5,271 acres of rubber in 1919, and you will see that our total area under hevea is 17,971 acres. This does not include the rubber at Sariredja and Djagernaik, two of our hill estates, where it was thought at one time by our visiting agent that the high altitude would not permit us to grow profitable rubber. Although growth has been slower at this height, the yield of latex is now surpassing some of the lower estates. There is, I think, no doubt now that we have the largest acreage under rubber of any English company.

POSITION AND PROSPECTS OF RUBBER INDUSTRY.

In future, the position and prospects of the rubber industry will have a most important bearing on the financial returns of our company. At the present moment there is no doubt that the rubber purchased by consumers is not keeping pace with the production. The vital point for the consideration of the industry is this—whether the surfeit is due to permanent or temporary causes. Over a large part of Europe there is still an inability to purchase such a commodity as rubber owing to unfavourable rates of exchange and restricted means. We must remember that the United States generally proceeds to extremes in either withholding from the market or buying in large quantities, and we may have here a turn of the tide sooner than is generally expected. There is an unsatisfied demand for capital and credit, which makes it difficult for manufacturers to hold larger stocks than they can help, and the high prices of other products—such as petrol, and the cotton which is used in the manufacture of tyres, together with the ever-rising cost of labour—prevent the consumer feeling the advantages of the lower price of our commodity. Some of these latter causes may be permanent to some extent, but the general opinion of far-sighted observers is that the demand for rubber will largely increase within a few years. That there will be a considerable increase in production for some time to come, if not artificially restricted, is also tolerably certain, but the duration of life of the rubber tree, commercially, is a very uncertain quantity. Until this point has been more definitely ascertained, it is almost impossible for us to forecast the future position of the industry. We in this company can, of course, carry on our industry with rubber fetching a much lower price than at present. In fact, I think we could go on paying dividends when many of our competitors had been driven to the wall, but this would be a state of things which could only be looked upon as undesirable.

SUITABILITY OF SOIL.

A large proportion of our lower land is suitable for rubber, and scarcely at all for any other product which we are now growing on the lands. Though we are continuing to open out rubber estates on a considerable scale this year, and may continue to do so in a lesser degree in 1921, yet we are endeavouring to discover some other product suitable for our soil and climate. We are experimenting with one or two—I may instance sisal hemp and jute—with a view to seeing whether we can grow them in place of larger extensions of hevea. I was pleased myself with the general aspect of the rubber on almost all our estates, and I find that visitors are equally gratified. We have always adopted the alternate-day system of tapping, tapping one-half spiral cut. We are experimenting whether tapping every third day, with a view to economy of labour, might not be desirable, in order to effect the agreed restriction of output. Personally, I am always in dread that visiting agents may carry to an extreme some notion or conviction which may be fundamentally good in itself—and I am rather afraid of their advice in this respect as in others—that they might be recommending too large a present sacrifice for the sake of the possible future of the tree. Though perhaps not desirable as a permanent policy if rubber is only undergoing a temporary depression, third-day tapping may be the right course to adopt as a means of restricting output and effecting a reduction of cost at the same time.

RESTRICTION OF OUTPUT.

You will gather from the foregoing that we have supported the scheme of restriction recommended by the Rubber Growers' Association. Our sales of rubber for the present year, 1920, including forward sales to the end of the year, total 956 tons, which is approximately 90 per cent. of our estimate for the year, and the price averages 1s 9½d f.o.b. Java. For 1921 we have forward sales of 564 tons, sold as outputs, *i.e.*, 75 per cent. guaranteed first quality; the average price of these sales is 1s 10d f.o.b. Java. For 1922 we have a contract for 300 tons first quality sheet at 2s 8d per lb f.o.b. Some of these forward sales for 1920 were effected in the early autumn by our agents in Batavia, when they noticed that the prices obtainable in London were lower than those they could obtain in Java. Their close attention to our interests in this respect has proved of material advantage to the company.

TEAK.

The Dutch Government left one or two forests of teak, and have allowed us five years in which to cut down the timber on the land which they have taken from us. It has been our policy to exploit the teak, but last year, with the exception of the firewood, we did not manage to supply for the markets more than half the quantity of timber that we did in 1918. We seem able to compete successfully in selling teak with the Government, who own large forests. That is generally the case when private enterprise competes with a Government. Both our timber and firewood realised high prices—higher than in 1918—but naturally the total profit is less owing to the decreased output of the best timber. We have the pleasure of having here Mr Ledeboer, who is practically our visiting agent as regards the teak forests. He has been connected with teak for a good many years. The actual profit comes out at £14,718, against £23,555 for the previous year. In addition to this profit, £3,916 has been carried to the reserve fund against the time when our teak supplies will have become exhausted. I am sorry to say that our teak forests will not remain a source of permanent revenue to the company.

RICE: INCREASED YIELDS.

Our last year of the ownership of the rice lands has proved a very successful one, the number of acres, both irrigated and dry, being larger than in 1918, and the yield per acre distinctly greater. The profit was half as much again as compared with the previous year. As I have told you before, this profit is not derived from rice alone, but also from all the direct payments with which the natives are assessed. It seems a pity that we could not have had our terms of expropriation fixed at the present price of rice and increased yield. However, there are rumours afloat that the Dutch Government intend to pass a law reducing the number of years' purchase, so perhaps we should not have gained by a postponement. I may mention that in place of this revenue from rice, &c., in future we shall have our fresh plantations coming into bearing, and the interest on the money received from the expropriation until that money, in turn, is used for development.

BONUS SHARE PROPOSAL.

I will now refer to the circular which we sent out last August announcing two proposals by the directors—viz., the issue of bonus shares to the shareholders in the proportion of one new share for every two held, and extending the sphere of our agricultural operations to Sumatra. I have been criticised because I did not call a meeting. I had fully intended to do so—in point of fact, I had already prepared a speech for such a meeting, and it was only when I was told that a meeting in holiday time would be looked upon as extremely undesirable by the majority of the shareholders that, with the consent of my colleagues, I decided to send out a circular letter in its place. Some of the shareholders, I know, would have preferred a return in cash instead of shares. In every large company the shareholders may be divided into two camps—those who buy for a rise and those who buy for a permanent investment. After an experience of directorship covering nearly 40 years, I have come to the conclusion that the members of the former camp, though more vociferous, are smaller in numbers than the permanent investors. What the majority really desire is a good return on the capital invested fairly secured over a prolonged period of time. Had we given a return in cash, we should have given satisfaction to a proportion of our shareholders at the expense of weakening the company as a whole. I have never known any period in the

history of industrial and agricultural development when it was more desirable than now to be in a very strong financial position. I do not mean to say that we could not have made a certain return to the shareholders and still have carried out a reasonable programme of extensions, but this might quite conceivably have involved the necessity of taking money from revenue in certain years. The Dutch Government are very anxious that the cash received should be reinvested in the Netherlands Indies. It must be clearly borne in mind that this money received from the Government is a capital and not a revenue receipt.

COMPANY'S STRONG FINANCIAL POSITION.

There are only two ways in which the money can be returned to the shareholders—either by reducing the capital or by giving a dividend. The first course seems inadvisable in these days when large dividends cause feelings of discontent to arise among the people who cannot participate in them, and, more important, to return capital, or to distribute in the form of a special dividend, would have a material bearing on the question of taxation, besides considerably weakening the company's position. Now the company is extraordinarily strong financially. The shareholders automatically acquire more shares than they have previously held, and those who wish to obtain cash will be able to avail themselves of a favourable opportunity of realising. In this connection I would mention that Mr Hammond has agreed not to exercise any options until 1922, so that shareholders who sell will do so without meeting the possibility of large sales of the shares called in exercise of the options. It must not be supposed from these remarks that we have had many complaints. I do not think, on the whole, that we have had more than two or three letters per thousand shareholders, and some of them are thanking us for what we have done. We have nearly 7,000 shareholders. To those shareholders who now hold an odd number of shares we have decided to issue a fractional certificate for the half-share. It may, however, be found somewhat inconvenient to deal with these, and, if desired, we should be glad to act as a kind of clearing-house, to cash the fractional certificate at the best price we are able to obtain from other parties who are willing to buy the certificates. Of course, these fractional certificates do not carry any dividend.

SUMATRA: EXTENSION OF OPERATIONS.

Our second proposal is to extend our operations in Sumatra. In considering the suggestions which Mr Hammond put before me, I had first of all to weigh up the somewhat large question as to whether the supply of land suitable for tropical cultures is not getting more difficult to obtain as time progresses. There is no doubt that in Ceylon, and the more accessible portions of the Malay Straits, good land is only to be procured at a comparatively high price. Sumatra possesses some very good soil, though a large proportion of this island is composed of land of an inferior description. It possesses, however, a splendid climate for tropical products—perhaps the best in the world. It is not the impossibility of profitably spending the money obtained from the expropriation in the further development of the Pamanoekan and Tjiassem lands which has led us to desire to take up land in Sumatra—I personally believe it could all have been utilised on our old lands—but I have always expressed my desire to the shareholders that we wished, above all things, to have as many strings to our bow as possible by way of variety of cultures grown. A careful survey of the remainder of the lands left to us, however, led me to the opinion that, if we confine our attention strictly to the Java lands, rubber would not only be our chief culture, but would very soon so overshadow all others that our prosperity would depend to too great an extent on that industry. As regards tea, we are not desirous of extending our acreage largely, or, perhaps, at all, either in Java or in Sumatra—not in Java, because we seem to have drawn on our labour force in the hills to its fullest capacity; in Sumatra, the lack at present of an adequate supply of labour, especially of children, must force us to proceed cautiously in tea extensions.

SUITABILITY FOR COFFEE.

But there are two cultures which we have on the Pamanoekan and Tjiassem lands—viz., coffee and cinchona—which, I think, could be extended to more advantage in Sumatra than on our older property. Coffee, during our tenure of the lands, has not been a great success, and after a visit to East Java, I could not help on my return a feeling akin to disappointment at the aspect of our coffee crop. On the other hand, almost all the coffee I saw in my journey across Sumatra looked very flourishing, for the climate there seems to suit it better than in Western Java. It had one great advantage—that the crop in some parts is picked almost the whole year round instead of during only three or four months of the year, as on our Pamanoekan and Tjiassem lands. This is extremely important from the point of view of organisation and supply of labour. Of the land now left to us in Java only a limited amount is of the right quality and favourably situated for the cultivation of cinchona. We hope to start off in Sumatra with the initial and very great advantage of being able to use the experience of our Java experts in cinchona in helping us to open out those new concessions. By experts, I do not mean the European staff only, but the best natives who have been working under them on our own lands. I have some hopes that it may be possible, through the agency of our managers in Java, to induce some of the labour which now works for us there to come and work under our supervision in the new Sumatra concessions. As regards rubber, although I believe Sumatra will give higher yields than Java, we prefer at the present moment to carry out our chief extensions on our old estates, where labour is more plentiful.

MR HAMMOND'S OFFER.

I think anyone who examines with an unbiassed mind the scheme which Mr Hammond puts before us will recognise the straightforwardness and fairness of the proposals. He was very anxious that the agreement, if carried out, should be of as clear and straightforward a character as it was possible for it to be. Mr Hammond's great ambition in life, and the project very near his heart, is to make the Anglo-Dutch Plantations of Java, if not the foremost, at least one of the leading plantation companies in the East. I believe his offer, which was made to me in January last, at a time when there would have been no difficulty in floating a company at a large profit, was largely, if not solely, dictated by the desire to extend the sphere of influence and promote the prosperity of our company. Besides his out-of-pocket expenses, he is only asking us for an option on shares, which, if taken up, will be paid for at the high price of 55s per share. If by any conceivable chance the Sumatra proposition should not be a success, the price of our shares may not justify the options being exercised, and Mr Hammond will receive no profit from the deal. If it prove a success, as we fully anticipate, the extra capital acquired by the company will certainly be wanted, and be obtained on very satisfactory terms. Since I wrote that I have heard another criticism of Mr Hammond. I am sorry that people make criticisms on others without knowing the facts, and I should like to answer this one. The criticism is that Mr Hammond ought to have opened out the Sumatra development for the Anglo-Dutch Company instead of for himself. The fact is he asked the directors to send to Sumatra to see whether concessions could be obtained there on behalf of the Anglo-Dutch Plantations. The reason why this was not done was that I, with the consent of my fellow-directors, put a veto on it. This was done when the expropriation question first came forward. At that time we were short of cash; we did not know what we should get for the expropriation, and did not even know that the expropriation would be carried through; we did not know how much land would be left to us, and we did not know exactly how much of the land left to us would be suitable for the different crops which we grow. We considered the matter carefully, and decided not to do anything at that time. Thereupon Mr Hammond, certainly justifiably, employed an agent to go to Sumatra and pick up concessions. I do not at all regret the action I took at that time. I think I did right even now, because I think the bargain we have made with Mr Hammond is better for us, as we are not obliged to take up all his concessions. Whether I was right or wrong, if anyone is to blame for the Anglo-Dutch not sending agents to Sumatra, the blame should be put on to me, and not on Mr Hammond. Our shareholders need have no fear that we are going to rush headlong into extensions in Sumatra. We shall proceed very cautiously. Labour there at the present moment is very expensive, but I believe that, consequent on the set-back which tropical agriculture has recently received, the demand for labour will fall off considerably, and the price at which it will be procured before very long will be a great deal less than present rates. We shall watch for the best time to make a start, and take advantage as favourable opportunity offers.

WESTERN SUMATRA.

After leaving Java this year, I had a most interesting trip with Messrs Hammond, Bosanquet, and Dickenson—the latter gentlemen two of our visiting agents—through a portion of Western Sumatra, travelling from Pandang, on the western coast, to Medan, on the eastern. I was greatly surprised to find how much more the western coast had been opened out than I had ever anticipated, and there was one rather important consideration not to be overlooked, that, whereas on the east coast I found the price of rice had touched over 70 guilders a bag, it was only 15 guilders in the western portion. I was unfortunate, however, in not having time to see the large Ranau Concessions in the Palembang and Benkoelan Residencies, for this was considered the land on which the coffee and cinchona could best be grown. It was in this district especially that Mr Cummins gave his most favourable reports, and we have now received a cable from Mr. Daukes, one of our directors, who has just been visiting the Sumatra concessions, giving his opinion strongly in favour of pushing on cultivation in this district in coffee and cinchona as soon as all the formalities of handing over the properties have been complied with, and we can see our way clear as regards the labour question. How much of the total of the land

applied for will be granted by the Government is still an unknown quantity, and the question as to how much land we shall eventually decide to retain will require the careful consideration of the board. We are not dealers in land. We have no desire to take up any simply on the chance of reselling at a more or less remunerative price. Two ways are open to us to develop these properties: we can either do the work ourselves, or form subsidiaries in which to retain a considerable interest.

Be sure of this, ladies and gentlemen, for our own sakes we directors would never have entered upon this new programme. It would have been so much easier for us after we had brought the Pamanoekan and Tjiassem Lands to a satisfactory position as the result of years of strenuous work, to have given you augmented dividends on a reduced capital, and to have saved ourselves all the labour and anxiety involved in a fresh development programme. Every reason for our own comfort would have led us to rest on our laurels and remain content with the results already achieved; but we have the greatest belief in our organisation, and this, coupled with our capital resources, has led us to conceive it our duty to take up this additional burden in order to make the Anglo-Dutch Plantations of Java and Sumatra the finest undertaking in the East.

DROP IN PRICES AND PLANTING.

Possibly the fall in prices of our chief commodities during the last month or two may have induced the shareholders to believe it is unwise to continue our planting programme. I do not at all agree with this view. It is quite possible that the present depression may continue for two or three years, but none of the products we are planting will come into bearing during that period. I must once more call the attention of the shareholders to a remark which was made to me by the then Governer of British North Borneo on my first visit to the East over a quarter of a century ago. He told me that it was his opinion, after examining statistics and using his own observation, that his experience would lead him to choose those cultures which were paying worst rather than those which were paying best were he contemplating engaging in tropical agriculture, the three or four years necessary to bring these cultures into bearing marking the swing of the pendulum as regards the profits to be derived from the different industries. For myself, when I am dealing with a product which is always sure to be wanted in a greater or less degree, I have always asked myself the question, not what the price or profits are at the moment, but whether on the property I am dealing with the commodity is capable of being produced on terms which will always enable me to complete successfully with any other rival producers. If we can do this we must come out on top at the end. For us, who have money resources at our disposal, to stop planting when other estates are unable to extend their operations, and consequently possibly leave a gap either in the increase or continuance of the supply of a product a few years hence, seems to me an unwise proceeding.

DEVELOPMENT AND TAXATION.

There is one consideration which should not escape the attention of shareholders, and that is that the continuation of our development programme saves us in our taxes. The whole of the recurring expenses in keeping up our non-productive areas can be charged against revenue, and so enable us to reduce the total payment of income-tax. Further, any expenditure which we make for new plantings receives the benefit of the extra percentage allowed in respect of increased capital before excess profits duty is calculated. Finally, I must ask the shareholders to trust the directors in this matter, and especially the managing director, Mr Hammond, who has served you so splendidly in the past and has gone out to Java at some risk to his health to look into this question on the spot. We must maintain an even keel; not carrying too much sail when the breeze of optimism blows so alluringly, nor, on the other hand, lying hopelessly in the doldrums of pessimistic despair when conditions do not appear so favourable. The ambition of the directors is not only to build up a company paying good dividends to the shareholders, but to extend the prestige of England and English business men for enterprise, uprightness, and fair dealing, in these far away but rich and important countries in the East. The sands of my glass are now running low, and I cannot expect myself to do more than help to lay the foundation of the prosperity and success of our company. I have frankly placed before you the position of the company and the intentions of the directors, and we ask unhesitatingly for the support of the great body of shareholders. I now beg to move, "That the directors' report and the accounts to December 31, 1919, as presented, be received and adopted."

Major O. C. Magniac, in seconding the resolution, remarked that the chairman had said with regard to Sumatra that any blame should not be given to Mr Hammond, but to himself. In saying that the chairman was too generous; if any blame was to be given it should be given to the whole board, because it was carefully considered by the board, and the board adopted at that time obviously the right course. He also desired to endorse what had been said by the chairman as to the great debt of gratitude which the company owed to Mr Hammond for the great ability, tact, and courage which he had displayed in furthering the interests of the company.

The resolution was then put and carried unanimously.

The Chairman then moved that a final dividend at the rate of 12½ per cent., less tax, making 17½ per cent. for the year, should be paid on account of the year ended December 31, 1919.

This was seconded by Mr E. W. Burch and carried unanimously.

The retiring director (the Hon. Charles Hedley Strutt) was re-elected, and Messrs Deloitte, Plender, Griffiths and Co. were reappointed auditors.

The Chairman next proposed:—"That the capital of the company be increased to £2,250,000 by the creation of 750,000 new shares of £1 each, ranking in all respects *pari passu* with the existing shares of £1 each of the company."

Major Magniac seconded the resolution, and it was unanimously agreed to.

At an extraordinary general meeting, which followed, the new article of which notice had been given was formally approved.

A vote of thanks to the chairman, the board, and the staff terminated the proceedings.

ENTRE RIOS RAILWAYS COMPANY, LIMITED.

NECESSITY FOR INCREASED RATES.

FAVOURABLE REPORT ON CROP CONDITIONS.

The ordinary general meeting of the Entre Rios Railways Company, Limited, was held, on the 3rd instant, at River Plate House, Finsbury circus, London, Mr Follett Holt, M.Inst.C.E. (the chairman of the company), presiding.

The secretary (Mr W. J. George) having head the notice convening the meeting,

The Chairman, in moving the adoption of the report, said that, having regard to the financial and operating difficulties with which the company were faced during the war period, he hoped the shareholders would consider the results now shown not without promise of better things. For the second year in succession, after providing for renewals, they had been able to meet debenture charges and the full dividends on the first and second preference stocks and to carry forward an increased balance. The directors regretted that they could not recommend the payment of a dividend on the ordinary stock. During the past five years they had not raised one penny of additional capital, and it had only been by the greatest care that they had been able to carry on with the absolutely necessary improvements to the system and to keep their heads financially above water and avoid raising new money, which at rates and conditions ruling would have meant draining the company's blood at the expense of the ordinary stockholders. He hoped that they would shortly be able to obtain the consent of the authorities to the very necessary increase in rates to meet their special circumstances, as increased labour and fuel charges had hit them hard during the past year and were hitting them hard at the present time.

As regarded fuel, they had reduced coal consumption to a minimum, and in its place used firewood, which they obtained with increasing difficulty and expense within their own zone in Entre Rios. Oil supplies at present could not be obtained at prices which the company could afford to pay, but the board had some hopes that the developments taking place in the Argentine oilfields would eventually bring some relief. As far as labour was concerned, they were doing all they could to utilise it to the best advantage. They were installing throughout the railway the system known as telephone train control, and by that means they would better secure that all trains were loaded to their maximum capacity, and were moved and crossed on their single line with the minimum of delay and therefore of expense.

GENERAL CONDITIONS IN ENTRE RIOS, &c.

During the last few months he (the speaker) had travelled extensively in Entre Rios, Corrientes, Misiones and Paraguay—the countries with which the company's interests were bound up. He found that a very marked improvement had taken place in Entre Rios during the past few years. Were it not for the excessive cost of fuel and materials and the unknown labour factor, he felt that as a result of what he had seen in the past few months he would be justified in being optimistic as to the near future. In present circumstances, however, there was so much that was out of their control that he must be more than ordinarily cautious, but he could assure the shareholders once again that they owned an improving railway property, and that it served a good and progressive zone. An opportunity of adhering to the Mitre

Law recently arose, and now their system in its entirety owned the same franchise as the larger railways in the Argentine. Under the Mitre Law the company was entitled to a satisfactory return upon its capital.

The success of the train ferry system was handicapped by the limits of the carrying capacity of their three great steamers, and they had not been able to increase their fleet on account of the high prices asked by shipbuilders. A suggestion had been made that the route of the train ferries might be shortened by the deepening of a canal that had recently been constructed by the Government. The shortening of the ferry route would increase the carrying capacity of the present fleet and would reduce the running time of the through trains, to the great advantage of the very large zone served by the company. According to a cable received in the last few days, the prospects for wheat and linseed crops shortly to be gathered were favourable. It stated: "Cattle and sheep in good condition. Total area sown with wheat, oats, and linseed estimated about 17 per cent. above last year. Beneficial general rainfall all over the line and crops assured. Organised labour causing considerable anxiety, but we hope that in view of generous treatment the men have received it will only be temporary."

The report was unanimously adopted.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.

THE AGREEMENT WITH THE LONDON BANK OF AUSTRALIA.

ADVANTAGES TO BOTH BANKS.

The 28th ordinary general meeting of the English, Scottish, and Australian Bank, Limited, was held, on the 3rd inst., at 5 Gracechurch street, London, Mr C. J. Hegan (the chairman) presiding.

The London manager and secretary (Mr E. M. Janion) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I think we must all feel that more than ordinary interest attaches to this meeting we hold to-day, standing, as I believe our bank does, on the threshold of far-reaching developments. It is a great pleasure to your directors to be able to point to the satisfactory result of the year's working. The difficulties experienced during the first six months after the cessation of hostilities, in setting to work to readjust finances and restore the dislocated trade of the Empire to pre-war conditions—in the latter case largely a question of shipping facilities—were gradually more or less overcome. There was a considerable revival of trade between Australia and other parts of the world, in which the banks, it is needless to point out, had an important part to play. A very few months ago the accumulation of funds in the hands of the Australian banks in London was unusually large, so much so that at one time the problem seemed to be how to get them transferred back to Australia in time to assist in financing the shipment of the season's wool clip; but the exports from this and other countries to Australia during the last few months have been on such an extensive scale that already the balance inclines the other way, and a disproportionate amount of their resources is now on the other side.

THE BALANCE-SHEET.

As I said before, we are able to lay before you to-day a very satisfactory balance-sheet. Deposits on current account show the very gratifying increase of £1,693,000, and although deposits at interest show a falling off of £451,000, I should like to explain that that is due entirely to ordinary fluctuations in the Government balances, deposits from the public having increased by £673,000. The figures under the respective heads of bills payable and bills receivable are in both cases noticeably larger. On the assets side of the balance-sheet investments show a reduction of £371,000, owing to our having realised some of our holding of War Bonds at prices which compare very favourably with what we could get for them to-day. On the other hand, cash in hand and at short notice is higher by £776,000, and advances by £778,000.

In the profit and loss account the most noticeable feature is that our gross profit for the year shows an improvement of no less than £88,000, though a good deal more than 50 per cent. of that amount—in other words £51,000—is swept away by the increase in taxation and general charges. I need not point out that taxation is an item which it is beyond our power to control, and in these times, with prices of everything soaring upwards, one might almost say the same of the expenses of management, however great the economy practised; at all events, I do not think anyone will grudge what is by far the largest item in this increase, viz., the addition to the salaries paid to our staff here and in Australia, on whose loyal and efficient co-operation so much depends. We propose to make the appropriation to reserve fund up to £50,000, thus reverting to our usual practice, which was temporarily interrupted last year in order to make a special grant of £25,000 to the Officers' Guarantee and Provident Fund. This year we invite you to vote £5,000 to that fund as the normal contribution of the bank in a good year, and the remaining appropriations being the same as before, we are left with a balance of £43,254 of undivided profit, which we propose to add to the amount brought forward from last year. We feel confident that you will approve of our husbanding our resources in times like these; in addition to which it is only prudent to make some provision beforehand for the expenses attending the amalgamation. Australia itself is enjoying a period of great prosperity.

THE AGREEMENT WITH THE LONDON BANK OF AUSTRALIA.

I propose to say a few words about the agreement entered into with the London Bank of Australia, which we regard—and you no doubt do the same—as the chief event of the year. A fusion of interests between our two banks has long been a subject of speculation and rumour on both sides of the water, so that when the announcement was made a couple of months ago it occasioned no surprise in Australian banking circles; but as a matter of fact, there had been no foundation for these rumours, for no overtures had been made on either side until the spring of this year. No sooner, however, had we set to work to give the matter serious consideration than it became evident to the boards of both banks that great advantages would attend a fusion of interests between the two institutions, which had been advancing side by side in parallel lines, as it were, from the dates of their inception, both banks having been founded in the middle of last century, and in the very same year—1852. Both have undergone much the same experience; both have encountered difficulties of no ordinary kind, and have surmounted them; and both have given evidence in recent years of that steady and ordered progress which, combined with strength, is the main feature of successful banking.

NEED FOR BIG BANKS.

It is, perhaps, scarcely necessary to emphasise the fact that this is the day of big banks. It was the recognition of the fact that as soon as the industrial undertakings of the country were set going again after the termination of the war the banks would be called upon to assist by making large advances to their constituents, which led to the amalgamations we have witnessed here of late among even the big banks themselves; and, *cæteris paribus*, the same state of things exists in distant parts of the Empire, where, owing to a variety of causes, exporters and importers alike have had to lean more heavily than usual upon their bankers. But, apart from these general considerations, we soon found, on looking closely into the matter, that there were also very special ones which pointed to the desirability of an amalgamation of the two banks. While the field of operations of the London bank is, as we have already pointed out, indentical with our own, we have developed, geographically speaking, in different directions; so much so, that in the suburban and country districts of Victoria, where we have between us some 114 branches or agencies, there are only three cases in which we overlap each other; and in New South Wales—the city of Sydney being, of course, excepted—there is not a single case of overlapping, although one or the other of us is represented in 91 different places. It may be said that there will, therefore, be the less opportunity for the reduction of expenditure by the closing of branches. That is true so far as the country districts are concerned; but you will readily understand that the expenditure incurred at most of these country branches is, comparatively speaking, a very small matter. On the other hand, we shall have in future but one chief office in each state where two existed before; and by the concentration of the management of the combined banks in the hands of our very capable general manager, Mr Wren, we feel confident that substantial economies will be effected. A rather remarkable instance has already occurred of the economy which will result from the amalgamation of the two banks. When we come to close quarters we found that both quite independently of each other had decided upon opening a branch in Tasmania; but this duplication of expenditure, with its resulting competition, has now been avoided, we ourselves having opened a branch in Hobart on the 4th of last month, which will be representative of both banks.

TERMS OF THE AGREEMENT.

The circular we sent you in August last will have acquainted you with the main features of the arrangement come to with the London bank. The existence of three classes of shareholders in that bank—viz., fully-paid preference shares, ordinary shares with £10 paid and a £12 10s liability, and ordinary shares with the whole of the liability paid up, made the details of the arrangement somewhat complicated, for the terms offered had to be sufficiently attractive to ensure their acceptance by each of those three classes, while in the interests of our own shareholders we had to see to it that they were not in excess of what the circumstances of the case warranted. Committees of the two banks met in frequent con-

ference on this point, and we have the best possible proof that we steered a middle course between these two extremes in this—that whereas a criticism not infrequently heard was to the effect that the terms were not sufficiently tempting, they have been accepted by over 90 per cent. of the shareholders of the London bank—considerably over 90 per cent., I may say. A reasonable deduction from these facts is that it was—what we all wished it to be—a bargain perfectly fair to both parties, and one from which both may expect to derive very considerable advantages.

DIRECTORS AND STAFF.

The agreements with the London Bank contained provisions for taking over the whole of their staff, both here and in Australia, with the exception of the general manager, the manager in London, and the manager in Sydney. In all these cases the dates were not far distant when, in the ordinary course of things, these officers would have had to retire, and we agreed to their receiving such compensation as the directors of that bank considered their length of service entitled them to. Further provision was made for the constitution of a joint board to manage the affairs of the combined banks, to give effect to which we undertook that two of your directors should resign their seats in order to make way for three of their directors who will join our board—thus increasing our number to nine, the full complement allowed by our articles—the retiring directors on either side having their present fees continued to them for life as a retiring allowance. Now, on this subject I should like to say at once that, while this forms part of the agreement, and has a binding effect so far as the four retiring directors of the London Bank are concerned, it has no binding effect with regard to the two directors who will have to retire from this board, and it will be for you, gentlemen, to decide whether you will accord like treatment to them. A specific resolution dealing with this subject will be submitted to you at the end of the meeting, and I think it will simplify matters to postpone further consideration of that point till then. But perhaps I ought to give you at once the names of the two directors who, under this provision, are about to retire. They are Mr Jackson and myself. Mr Jackson has been a member of our board for the last 27 years, and this being the only opportunity I shall have, I hope he will allow me to bear witness to the important part he has played both on the board and on committees during all those years, and to the cordial relations which have always existed between him and his colleagues. In conclusion, I want to thank the past and present shareholders of this bank for the unvarying kindness they have extended to me personally, and for the confidence they have reposed in the board during the 31 years that I have had the honour to occupy this chair.

Mr James Jackson, in seconding the resolution, said his regret at leaving the bank was tempered by the fact that as a result of their 27 years' work, what emerged from the convulsion of 1893 as a weak bank had by careful handling become a robust and trusted bank. He agreed with what the chairman had said that the combination would result in benefit to both institutions.

The resolution was carried unanimously.

The Chairman proposed a vote of thanks to the general manager and staff, and spoke in high terms of their work. Mr Connell seconded this, and it was carried unanimously.

The retiring directors and auditors were re-elected; and the directors' fees were fixed at £8,000 per annum.

Mr Williamson then moved that a retiring allowance of £2,000 per annum should be paid to Mr Hegan, and £550 to Mr Jackson. In the course of a eulogistic speech he said: It has been an essential condition of carrying through the fusion arrangement that in the case of the four directors of the London bank retiring allowances shall be granted to them in the form of payments to them for the remainder of their lives on the basis of their present remuneration. That the shareholders of the London bank have approved of this is evidenced by the fact that over 90 per cent. of the shareholders have come into the scheme.

In the case of the two directors of this bank who retire, the fixing of the retiring allowance to them rests with the shareholders of the English and Scottish Bank, and I am sure that they will wish their own two retiring directors to be treated not less generously than the four retiring directors of the London Bank.

TRIBUTE TO MR HEGAN.

The shareholders can never repay Mr Hegan the debt of gratitude they owe to him for the wisdom and strength of his conduct of their affairs in the dark and anxious days of 1893. Since then for seven and twenty years he has presided with conspicuous ability and devotion over the business of the bank. He can look back with feelings of intense satisfaction, and some pardonable pride, upon what has been achieved. He has seen the business of the bank expand during his tenure of office with a strong and healthy growth into the enviable position which it occupies to-day. The comparison is striking as against a position 24 years ago of no dividend, no reserve fund, a debit balance to profit and loss of £34,000, as well as a debt of £866,000 to the holders of the bank's terminable deposits shortly thereafter falling due for repayment. You have to-day that debt paid off, a reserve fund of £635,000, a credit balance on profit and loss account carried forward of £94,208, and a dividend of 10 per cent., tax free. I have no hesitation in saying that Mr Hegan has proved himself to be an ideal chairman. Our satisfaction as his colleagues at the success of the fusion proposals is sadly tempered by the sincere regret that we feel at losing him as our chairman.

Lord Knutsford, also in a eulogistic speech, seconded the resolution, which was carried unanimously.

A suggestion was then made that a portrait of the retiring chairman should be painted and hung in the board room. This was agreed to with much enthusiasm.

A vote of thanks to the chairman, board and staffs at home and abroad terminated the proceedings.

BRITISH BANK OF NORTHERN COMMERCE, LIMITED.

AMALGAMATION APPROVED.

OBJECTS OF THE AMALGAMATION.

An extraordinary general meeting of the British Bank of Northern Commerce, Limited, was held, on the 3rd inst., at the bank offices, 45 Bishopsgate street, London, Mr H. Bendixson, vice-chairman of the company, presiding, to consider resolutions approving an amalgamation of the company with Messrs C. J. Hambro and Son, and an agreement in connection therewith, increasing the capital, changing the name of the company to "Hambros Bank of Northern Commerce, Limited," and altering the articles.

The secretary (Mr J. H. Roscoe) having read the notice convening the meeting,

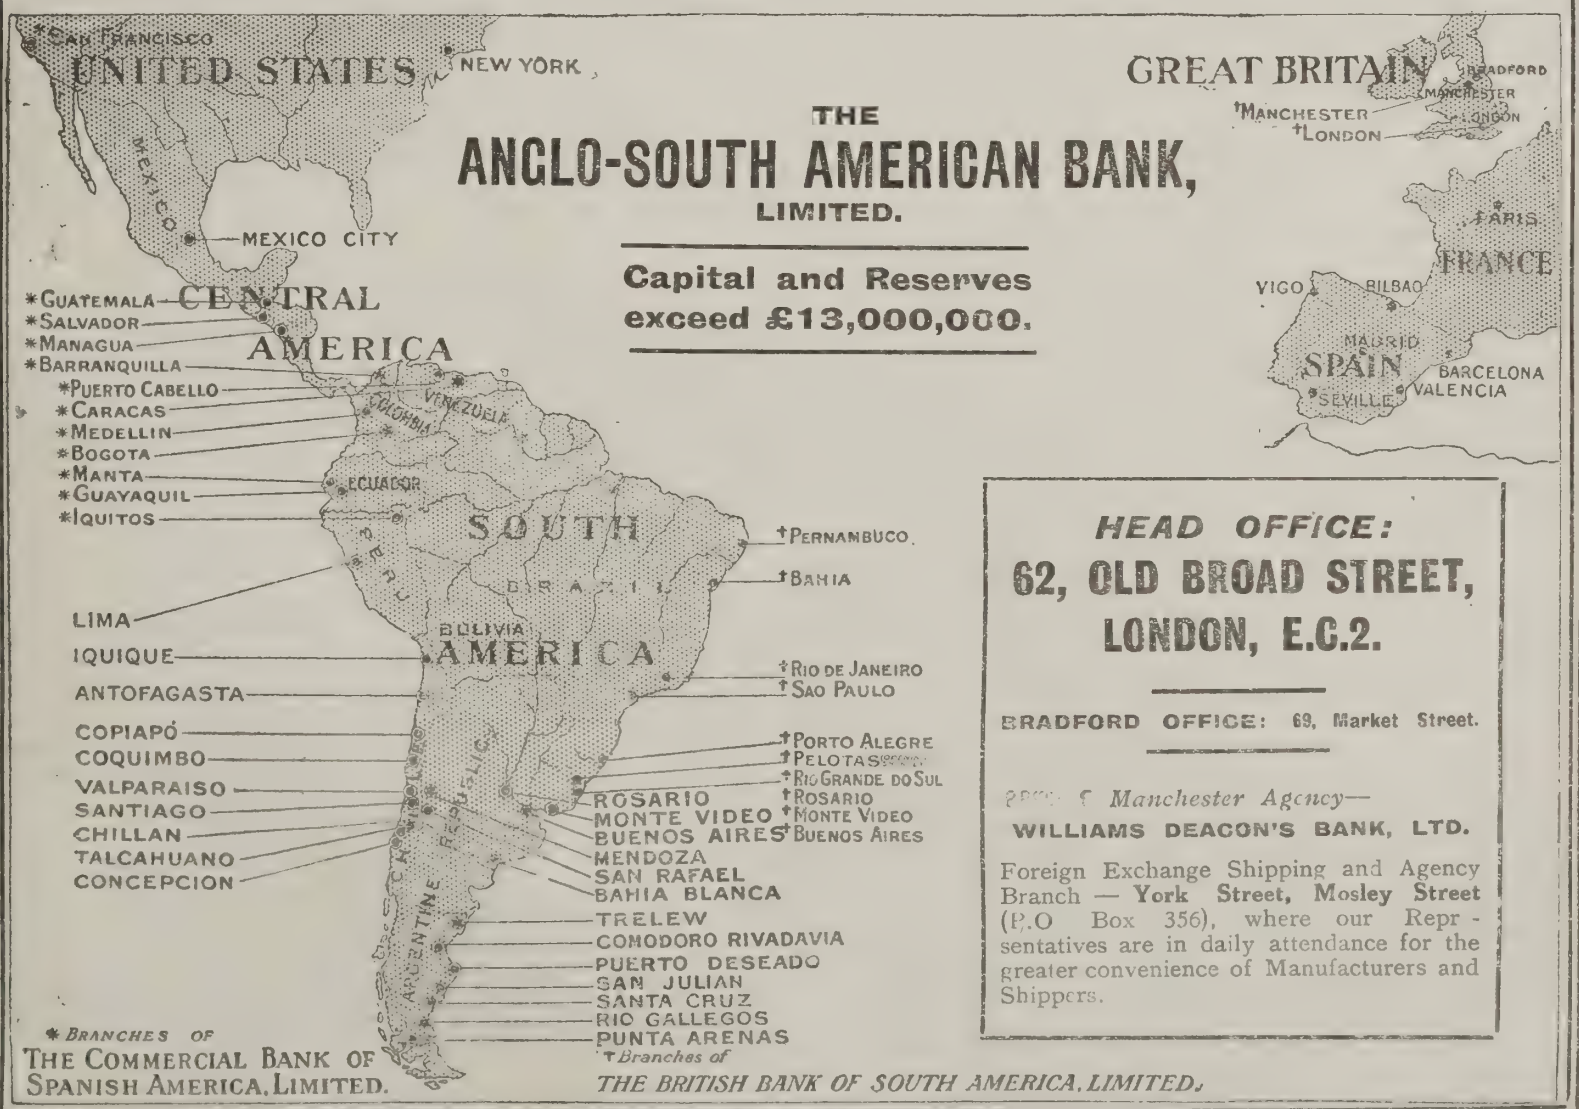
The Chairman said: Gentlemen,—When at the first statutory meeting of this company held on March 25, 1912, our late chairman, Earl Grey, addressed you, he explained the reasons that had led to the formation of this bank, and he referred to our desire to stimulate trade between this country and the northern countries of Europe, and to our ambition to forge an important link in this development. Our history during the past eight years demonstrates that we have taken a large share in this work. Everybody has had anxious times, but thanks to good management and to the powerful and steady support of our banking and other friends in the three Scandinavian countries, our business has continued to prosper. We have always had in mind the desirability of gradually enlarging the British interests in our bank. The proposed amalgamation will fully achieve this object. We had also to consider another aspect of the case. Our Scandinavian friends, when starting this bank, had the desire to create a big and powerful institution corresponding with their growing prosperity, and their important interests in English trade, and its ramifications. Our success, gratifying though it is to some of us here, did not entirely satisfy them. These are the real and principal reasons for the step that we have now taken, and for which we ask your sanction to-day. An amalgamation with the firm of Messrs C. J. Hambro and Son seemed most desirable. Their old connection with Scandinavia is unique, their name there has been a household word for upwards of a century. We had already worked together with them in Government financial operations. In addition to their intimate connection with the Scandinavian countries, they have also a large general European and London business. They represent the finest traditions of the first financial centre of the world, and an amalgamation with them would clearly achieve what we had in view. We therefore approached them on the subject, and, as both parties quickly recognised that the idea was a sound one, and ought to prove to mutual advantage, a preliminary agreement was concluded, and has since been embodied in the more formal one now on the table.

TERMS OF THE AGREEMENT.

I will refer to the agreement's most important provisions:—Its date is October 11, 1920. The date from which it takes effect is October 31, 1920. By its provisions Messrs Hambro hand over to this bank their entire business and goodwill. As already announced, they subscribe in cash for 200,000 shares of £10 each, paying up therefor £2 10s per share, namely, £500,000. For the issue of these additional shares we, to-day, ask your authorisation. They further hand over to us assets consisting of investments of a value approximating the same amount, which amount will go to increase the bank's reserves. The capital of the enlarged concern will therefore be as follows:—subscribed capital, 400,000 shares at £10 each—£4,000,000. Paid-up capital, £2 10s per share on 400,000 shares—£1,000,000 In addition thereto the bank has its already published reserves—£1,050,000. You will therefore see that our financial strength is immensely increased both in actual cash and in uncalled capital, and I do not think you will be of the opinion that I claim too much when I say that Hambros Bank of Northern Commerce, Limited, will in the

future take its place among the strong financial institutions in the City of London. We have agreed to take over, at a valuation, the lease of the valuable premises No. 70, Old Broad street, E.C., owned and occupied by Messrs Hambro. We shall therefore retain both those premises and our present freehold here, Nos. 41, 43, 45, and 47 Bishopsgate, for our joint future use.

It is a part of the agreement that we elect the head of the firm, Sir Everard A. Hambro, K.C.V.O., as chairman of our company, and I feel sure that you will all cordially and gratefully endorse this election. Sir Charles Eric Hambro, K.B.E., will be a vice-chairman, and Messrs Henry C. Hambro and R. Olaf Hambro will be managing directors, as also will our general manager, Mr G. L. d'Abo. Messrs Hambro have further nominated as director Mr W. J. Heriot, and Mr Gabriel Brizon, the managing director of our sister bank in Paris, the Banque des Pays du Nord, has already been elected to the board. The agreement has been open to your inspection during the past two or three weeks, and I will not take up your time by reading it to you at this stage. It is a somewhat lengthy document. If any of you wishes it, you can have the agreement read here now. The articles of association have, of course, to be somewhat modified. We have first of all agreed to substitute the name of Hambros instead of British, the name of our bank to be in future "Hambros Bank of Northern Commerce, Limited." Not only Messrs Hambros, but we ourselves attach great importance to the retention of their name in some form; it is a goodwill of the greatest value. The other changes in the articles are all either consequent thereon or intended to render the practical working of the bank easier or more convenient. The increase in the number of directors necessitates a considerable increase in the fixed remuneration of the directors, which, in view of the magnitude of the bank, you will, I feel sure, understand is inevitable. The future board will consist of:—Chairman, Sir Everard A. Hambro, K.C.V.O.; vice-chairmen, Sir Chas. Eric Hambro, K.B.E., and H. Bendixson. Gabriel Brizon, Sir James T. Currie, K.C.B., S. E. Dahl, E. Glückstadt, Rt. Hon. Earl Grey, W. J. Heriot, H. Hunter, J. Jorgensen, Sir K. F. Knudson, K.B.E., J. Madsen-Mygdal, J. C. Priestley, K.C., K. A. Wallenberg; managing directors, H. C. Hambro, R. O. Hambro, G. L. d'Abo; managers, S. Colvin, M. Grancini, and L. Grönvold.



UNANIMOUS APPROVAL.

I think that I have now said enough. The general approval that has greeted our announcement encourages us in the conviction that the decision to be taken to-day will be unanimous. I may say in this connection that we have received proxies in time for this meeting for 154,792 shares. We have also received further proxies which are too late to be used at this meeting—they have to be lodged 48 hours before the meeting—to the number of 6,406 shares, making the total assets 161,198. In Russia—where postal facilities and conditions generally are not such as to have enabled us to obtain proxies—there are shares held to the number of 15,864 and, of course, for these we have not been able to obtain proxies. Therefore, the only shares for which proxies have not been lodged amount to only 22,938 (some of which are present in person), and this out of a total of 200,000 shares. I think, therefore, we can claim that the amalgamation has practically received the unanimous approval of the shareholders, and you will therefore see that we are justified in anticipating a favourable vote, and I now finally deal with a point which is of immediate and practical interest to you all, namely, our dividend for the time prior to the date of the amalgamation. It is only just that we should now divide among the old shareholders the approximate profits available. Our usual practice has been to pay a small interim dividend, but under the present circumstances our past earnings belong to the old shareholders, and enable us to declare now a distribution of 17½ per cent., 8s 9d per share, free of income-tax, which, I am sure, you will consider handsome.

All the resolutions were agreed to unanimously, and a vote of thanks to Mr H. Bendixson for his services was cordially carried.

SHEFFIELD STEEL PRODUCTS, LIMITED.

INCREASE OF CAPITAL.

SATISFACTORY AND PROGRESSIVE POSITION.

An extraordinary general meeting of Sheffield Steel Products, Limited, was held on Thursday, the 28th ultimo, at Winchester House, London, E.C., Mr Alwyn Howard Wild (chairman and managing director) presiding.

The secretary (Mr E. R. Eyre) having read the notice convening the meeting,

The Chairman said: The object of this meeting is to pass the necessary resolutions for adopting a new set of articles, and increasing the present capital of £2,000,000, divided into 2,000,000 shares of £1 each, to £4,000,000, of which 1,250,000 are to be 10 per cent. cumulative preference shares and the balance of 2,750,000 are to be ordinary shares. All is well with your company. The estimates for the present year have all been exceeded, and your company has felt no falling off in the demand for its products.

We have secured in the Templeborough Works one of the finest factories in the kingdom, modern in every respect and fitted with the most up-to-date labour-saving appliances. The conditions for the workpeople are ideal, and combined with all these subsidiary businesses, which you either have or will acquire in the very near future, the board is convinced that not only will this undertaking be in a position to meet competition, either in this country or from abroad, in the future, but that it has adopted the only possible policy for securing to this country the pre-eminent position in that branch of industry in which we are engaged.

TENS OF THOUSANDS OF CUSTOMERS.

The customers of Sheffield Steel Products are numbered by tens of thousands, and scattered as they are throughout the world, we can always rely upon a steady outlet for our productions.

Mr J. J. Jarvis: As you have already heard, George Clare and Co.—of which company I am one of the managing directors—were approached some time ago with a view to their becoming the financial advisers of the company, and I was invited to join the board.

When I visited Templeborough I was told it was the largest cutlery works in the world, and I could quite believe it. I was even more impressed by the excellence of its organisation, the long-headed way in which its lay-out has been planned, the many labour-saving devices, the obvious care for the workpeople, and the enthusiasm of those controlling its destinies.

Then it was that the full conception of Sheffield Steel Products was appreciated by me, and I was able to visualise the scheme of a key industry absolutely self-contained, a great wheel of industry of which Templeborough would be the hub.

The company owns its own colliery.

It will in due course have its own (1) steel plant; (2) rolling mills; (3) stamping shops; (4) finishing shops; (5) blue-water gas plant.

It already has all the engineering services at the works, such as light, heat, power, and ventilation, while railway connections running through the works link it up with all the main-line systems.

Although Templeborough is by no means fully equipped, output is not being checked, and whilst the outside conditions are not entirely ideal, they are well in advance of most of the company's competitors.

The company to-day has practically the monopoly of the plier trade in England, as it produces, probably, 75 per cent. of the pliers made. Its output is 1,500,000 per annum, which will increase to 2,000,000 next year. In spanners it makes 2,000,000 per annum, which is about half the number produced in the entire country. It makes 2,000,000 saws per annum, 7,000,000 files, and both these numbers can be doubled in the future.

THE LARGEST CUTLERY CONCERN IN THE WORLD.

But it is in table cutlery that the company is pre-eminent, not only being the largest concern in the world, but actually turning out 7,000,000 pieces per annum. In twelve months this output should be doubled, when the company should be making as much cutlery as all their competitors joined together.

The great point you have to keep in mind is that the company by its centralised methods can produce cutlery to-day at 25 per cent. below the costs of its competitors, and when the works are fully equipped this margin should steadily increase in the company's favour, in which case they will have the world's trade at their feet.

The company has acquired 354 houses immediately adjoining the works. The advantage of being able to offer housing to prospective workpeople can hardly be exaggerated, and will play an important part in securing the best labour. I have been in close touch with my co-directors for the last few weeks, and have been much impressed with the fact that they are all hard-headed, practical men, and keen on their jobs.

NEW BUSINESSES.

I have told you of the existing businesses, but I have said little or nothing of the new businesses it is proposed to acquire.

In my opinion, it is necessary that all these new businesses should be absorbed.

Let me take the first one—Hemmings and Co. By taking this in we get both the business and the man, and Mr Hemmings' services are valuable to the company.

The business of Hemmings and Co. is rolling steel, and the rolling mills are the bottle-neck of our trade. You may buy your billets easily enough, but it is not so easy to get them rolled.

Then take Amalgamated Stampers. This company has combined a number of stamping firms who manufacture the heaviest drop forgings down to the smallest cold pressings. There are, however, two other excellent reasons why they should come in. In the first place, we should remove dangerous competitors in several directions, particularly in the spanner trade, and in the second the company would secure an outlet for a considerable proportion of its surplus steel.

If the new steel plant is to be efficient and economical it must produce in large quantities. No doubt you will observe that a Sheffield steel company with a capital of over £9,000,000 has just been buying a similar company for the same purpose. Lastly, there are the Plumpton businesses at Warrington, which control the plier trade. They form a valuable link in the chain, and as they too will absorb a good deal of steel I think you will be doing a wise thing to take them in.

The purchase price of all these businesses, including the liability for two concerns not yet completed, amounts to £700,000, of which more than 50 per cent. is being taken in shares. Of the 350,000 shares to be given as part payment for the undertakings 250,000 are ordinary shares taken at par.

For this purchase price of £700,000 what will the company obtain?

The value of the assets, after deducting all liabilities and putting down nothing whatever for goodwill, trade marks, patents, &c. (some of which are of considerable value), is well in excess of the purchase price.

Based on the interim balance-sheets to September 30th last, these new companies are earning profits at the rate of £140,000 per annum after providing for all outgoings except taxation, or equal to 20 per cent. on the purchase price.

Finally, these businesses are taken over from certain back dates, so that nearly £100,000 of their profits to September 30th will come into the current year's accounts of Sheffield Steel Products, and, subject to taxation, will be available for dividend, so that from this source alone the greater part of this year's 10 per cent. dividend is available, although the profits of the parent company are far from being negligible.

FURTHER CAPITAL NECESSARY.

You will understand that to acquire these businesses, and to complete the present Sheffield Steel Products programme, further capital is needed.

My suggestion, therefore, is that an issue be made of 1,000,000 10 per cent. preference shares, carrying an option to subscribe at par for one ordinary share for each two preference shares held. This £1,000,000 should be sufficient, not only to acquire these new businesses, but to complete the present programme of the parent company.

Your company has a paid-up capital of £1,500,000. What have you got for it?

Land and buildings worth £700,000, machinery and plant worth £800,000, stocks worth £300,000, while there are rather more creditors than debtors. These figures total £1,800,000—let us say 1¾ million, against a share capital of 1½ million.

The nine months' profits to September 30th are approximately £130,000, which is at the rate of about £170,000 per annum, and this after setting aside the cost of repairs and renewals, directors' fees, salaries—in fact, everything except taxation.

The profits for 1920, including the businesses now acquired, should be between £250,000 and £300,000 at a conservative estimate, and, as the smaller amount is double the amount required to pay a dividend of 10 per cent., the continuance of this rate would appear to be assured.

As the concern comes into full production in 1921, these profits should steadily increase, and to my mind there are few companies to-day which hold such fine prospects of a successful future.

The resolution having been carried, a vote of thanks was passed to the chairman, and the proceedings terminated.

SEMENYIH RUBBER ESTATE, LIMITED.

THE COMPANY'S SPLENDID FINANCIAL POSITION.

The sixth annual general meeting of the members of Semenyih Rubber Estate, Limited, was held, on the 1st instant, at 38 Eastcheap, London, Mr E. G. Money presiding.

The Chairman, in moving the adoption of the report and accounts, pointed out that the company was in the strong position of holding £8,000 in War Bonds, £2,000 in Treasury Bills, and £4,357 in cash at April 30th last. The results for the past financial year were very satisfactory. The profit of £11,594 was equivalent to about 50 per cent. on the issued capital of the company. An interim dividend of 10 per cent. was paid in February last, and the directors now recommended a final dividend of 30 per cent., making 40 per cent. for the year.

Dealing with the present position of the rubber plantation industry, he said that the condition of the market at the present time was unprecedented. He did not believe, however, that there was anything in the position which threatened generally the future of the rubber plantation industry. It was now well established that there was no part of the world which could hope to compete with the Mid-East in economical production. He thought the public here hardly realised the extent to which costs had advanced during the past eight or nine months. Labour was more expensive; materials and supplies required for the development and working of estates had all risen enormously. The result must be that the cost of opening and bringing into bearing rubber estates would be infinitely higher in the future than it had been in the past. Similarly an increase in the cost of production must be expected. There was no doubt that the present slump in rubber was to some extent—possibly to a large extent—due to the supply having outrun the demand, and personally he thought that the scheme for restriction of output, which had now come into operation, would have its effect on the position before very long. Were it possible to complete the scheme of co-operation by including some effective means of stabilising and regulating prices, there was no doubt that the position of the industry would be quite unique for a good many years to come.

In common with others, this company would have to face the present low prices for rubber, but he might say that they had a forward contract for a fair proportion of their crop at a good figure. They had agreed to join the scheme for restriction of output, the subscribers to which were not bound beyond the end of the year 1921.

The report was unanimously adopted.

CEYLON CONSOLIDATED ESTATES, LIMITED.

RECONSTRUCTION APPROVED.

An extraordinary general meeting of this company was held, on the 1st instant, at 6 Laurence Pountney hill, London, for the purpose of considering resolutions providing for the reconstruction of the company. Mr Walter J. New (the chairman) presided.

The secretary (Mr W. Fenton Pugh) read the notice convening the meeting.

The Chairman, in the course of his speech, said:—We possess fine estates, and, as I pointed out at our last meeting, the only real danger we have to guard against is a lack of funds to bring them to maturity. It is clear that to do this more money has to be provided, and I ask you to consider the position as business men. The price of rubber has fallen to a figure one never expected to see reached. But, whatever may be the result of the scheme for restriction of output, of one thing we may, I suggest, feel confident, viz., that in the long run the great and increasing demand for a staple article such as rubber is not going to be satisfied except at a price which will afford a fair margin of profit to the producer.

Now the debenture scheme was put forward after very careful consideration, in the hope that it would commend itself to and be taken advantage of by the great majority of the shareholders. But out of 2,547 shareholders only 132 have applied for debentures. The £30,000 of debentures, which would, if taken up, have helped us over our difficulties, would at the same time, while the margin of profit is so low and our estates have not reached full maturity, have taken a large slice out of the profits of the company in the shape of debenture interest. If every shareholder had been also a debenture-holder, and as such taken a share of the slice, it would not have mattered. But if this big slice out of our profits is to be appropriated by a comparatively small number of shareholders, the position of the remainder becomes a very unsatisfactory one. As you have been informed, only about £10,000 of debentures were taken up. Well, then, if we resorted to some other method to raise the other £20,000, the position would be still more unsatisfactory.

Every shareholder will receive three 2s shares, credited as paid up to the extent of 1s 6d, in the reconstructed company for every two fully-paid shares in the old company, and the 6d per share to be called up by instalments, to make the shares in the new company fully paid, will enable us to pay off all our loans and provide sufficient funds to complete the development of the estates.

Mr George Bargate seconded the motion, which, after a lengthy discussion, was carried.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

TRADE CONDITIONS AND PROSPECTS.

The annual meeting of this company was held at Birmingham, on the 5th instant.

As the company's accounts are now being made up to January 31st, instead of as formerly to July 31st, no balance-sheet or accounts were presented, and after the formal business of the election of directors and auditors, the meeting was adjourned until April.

Sir Hallewell Rogers, M.P., the chairman, after moving the adjournment of the meeting, made some observations on trade conditions and prospects. He spoke at the outset of the dramatic contrast between conditions to-day and those prevailing a year ago. The aspect of disillusion and despondency over the world to-day, he said, had been effected principally by three factors: first, national finance at home; secondly, economic conditions abroad; and thirdly, the continued failure of the two human elements in industry to find some means of adjudicating between them when their material interests conflict. Early in the year the people of this country woke up to the fact that we were spending as a nation a far larger sum than we could safely raise by our annual taxes. The thing came home to us when, in his Budget, the Chancellor of the Exchequer informed us that instead of remitting taxes, he must increase them. Appeals to the public between October and February for new industrial and commercial capital were made on a scale and with a success never known before. After the introduction of the Budget, appeals on this scale were no longer made, though it was no secret that appeals not only on the scale of the previous winter, but on an even larger scale, were in contemplation. The spirit of enterprise that was the feature of the commercial and financial world before last February arose largely from the assumption that the excess profit duty would come to an end in April. Its continuation and increase then inflicted a worse blow on industry than merely to so paralyse those who were contemplating new undertakings. It vitiated the expectations and made vain the promises of those who had undertaken great extensions in the belief that the excess profit tax would cease. Financial conditions had steadily deteriorated, though Great Britain was not singular in having spent since the armistice a very great deal more than the revenue it could raise by taxation. Indeed, in most European countries the ratio of expenditure to revenue was more glaringly inconsistent than it was with us. As a consequence, it had become more difficult or impossible for them to import and pay for British goods.

RELATIONS BETWEEN EMPLOYEES AND EMPLOYERS.

Then the relations between the workers and employers had not improved as they should have done. It was strange that this should have been so, for never had the goodwill of employers towards workmen generally been more sincere or more active in promoting their interests than during the last two and a-half years. When he told them that since the Armistice to the end of September last there had been no fewer than 3,043 industrial disputes, involving the loss of 45,363,000 working days, they would realise how hampering this factor had been. The general atmosphere of depression had in no sense discouraged that board, though the changed condition had certainly affected in an adverse manner an investment made by the company last year in the purchase of shares of the Aircraft Manufacturing Company and Peter Hooker, Limited. A proposal was now before the shareholders and noteholders of the Aircraft Manufacturing Company, which if accepted by them should result beneficially to both parties. Reviewing the progress of their undertaking, Sir Hallewell said, taking the B.S.A. Company, that great progress had been made in every direction since the last annual meeting. That it had not been a progress on a much larger scale was mainly due not to their having miscalculated the forces at their disposal, but to the fact that they had encountered obstacles entirely external to themselves. They believed that these obstacles were neither of a permanent nor radical character. B.S.A. Guns, Limited, were not only steadily maintaining their position with their well-known products, but were steadily improving it. The success of their latest production, the B.S.A. double barrelled 12 bore hammerless gun, had exceeded their expectations. Not only were present deliveries satisfactory, but they were quite certain of reaching that standard of output which their programme demanded, and they had no doubt that this gun would prove to be one of the company's most successful peace products. Trade in Lewis guns and military rifles was at a stand-

still as they would expect, but in all other branches, particularly the air and miniature rifles, progress was continuous. B.S.A. Cycles, Limited, had been continuously successful throughout the year. At the moment there was the usual seasonal slackness, and possibly economic conditions, both at home and abroad, might result in aggravating and perhaps in prolonging this slackness. but as far as they could judge, now they would be able to keep their factory well supplied with work during the coming year, and this, notwithstanding the fact that their capacity had been so very largely increased.

B.S.A. EXHIBITS AT OLYMPIA.

At the forthcoming exhibitions at Olympia they would show models of bicycles and motor-cycles which would embody many important novelties. In particular they would show a bicycle specially designed by them and entirely new in many important features, which would strictly maintain the usual B.S.A. guarantee of quality. They wanted to offer to the public a bicycle that was equal, if not superior, to any other bicycle on the market at a very moderate price. What was true of the B.S.A. cycles and B.S.A. guns was equally true of B.S.A. Tools, Limited. In none of their activities had their war experience been of more value than here.

SUCCESS OF THE DAIMLER COMPANY.

At Coventry, the Daimler Company, which was extraordinarily successful last year in making transition from the products of war to the products of peace, had in the last 12 months surpassed even that record. Closely allied to this great undertaking in Coventry was the service offered by the Daimler Hire Company, Limited, in London. Prince's Skating Rink would soon be occupied, and before next season double, if not three times, the present number of cars would be available. This hiring service was not only lucrative in itself, but was a demonstration to all the world of the utility, comfort, and reliability of the Daimler car. The progress of the company's other undertakings had been satisfactory, and, in spite of the adverse character of many external conditions, the directors remained confident and optimistic, and would proceed with the extensions of its factories at Coventry road and elsewhere. The undoubted truth that the company could and did make the products which the world needed remained the basis of their creed and the foundation of their policy.

They were not only preparing for a large and more varied output, but were reorganising their selling arrangements both in this country and abroad, and co-ordinating the efforts of each individual undertaking. Finally, the board believed that in the coming revival of trade British engineering manufacturers should have a prominent share if they availed themselves to the full of what modern science could offer in the way of mechanical solution of engineering problems. For this it was essential that factories should be properly equipped, and it was to assist them in this that they had established a special department of B.S.A. Tools, Limited. They were prepared not only to take any desired product and provide the equipment which would enable the customers' own machine tools to do the required operations in a far shorter time and with greater accuracy than at present, but to take and work out the progress of manufacture for those who had a new device or machine to make, and they undertook the complete equipment of a factory to carry out the processes which they had devised. This department of their work had only recently been brought to the notice of other manufacturers, but already it had met with a gratifying reception, nor did they doubt that this branch of their business would grow to very important dimensions indeed.

On the motion of the Chairman, seconded by Mr Edward Manville, M.P., the meeting was adjourned to an early date in April.

MORUMS ORIENTAL STORES, LIMITED.

SATISFACTORY TRADING RESULTS.

The first ordinary general meeting of Morums Oriental Stores, Limited, was held, on the 4th instant, at Winchester House, Old Broad street, London, Mr D. Stoner Crowther presiding.

Mr P. Nichols (one of the joint secretaries) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts and the declaration of dividends making 8 per cent. on the preference shares and 6 per cent. on the ordinary shares, said that the profit on trading for the 15 months to June 30th last amounted to £79,378, and after deducting various charges there was an available balance of net profit of £46,017. In the balance-sheet the amount of £11,000 under the head of general reserve represented the balance of profit prior to incorporation (after deducting interest on the purchase consideration), and £9,593 transferred from profit and loss account—a conservative measure which the board felt sure would meet with the approval of the shareholders. As regarded the item of land and buildings, &c., they might be interested to know that the company had branches situated in Cairo (two), Alexandria, Mansourah, Tantah, Jaffa, and Jerusalem, whilst they contemplated opening a small shop in the immediate future at Port Said. The results of the first year's trading would, he was sure, be considered satisfactory. The turnover had increased appreciably; this, of course, represented in part the inevitable advance in prices, but at least 50 per cent. of the increase was represented by increased business. If, on the one hand, Egypt had had her full share of the abnormal prosperity enjoyed by the world's trade since the Armistice, she had, on the other hand, experienced a full measure of the social and political unrest equally prevalent.

The question of stock was the main pivot of the business, and was receiving the constant and unremitting attention of the board and of the management in Egypt. In the last few weeks conditions had undergone a great change. Goods in considerable quantities had come on the market, and wholesale prices had, in many articles, fallen appreciably. The greater part of the company's stocks, however, were of recent delivery, and were well bought. The company's business, however, was spread over so many different departments that, if they were favoured with anything like satisfactory conditions in Egypt, he did not anticipate that these facts would prevent their submitting to the shareholders such results in respect of the current year as would give them entire satisfaction. The company's main store in Cairo—that of Boulac—occupied unquestionably the finest commercial site in the city. They had greatly improved it during the past year, and had nearly doubled the floor space available. He did not think, therefore, it would be too sanguine to expect from that source alone considerably enhanced returns for the coming year.

Mr W. Cyril Tomlinson seconded the motion, which was unanimously adopted.

NUNDYDROOG COMPANY, LIMITED.

RECONSTRUCTION SCHEME ADOPTED.

An extraordinary general meeting of the Nundydroog Company, Limited, was held, on the 3rd instant, at Cannon street Hotel, London, to consider resolutions for the reconstruction of the company. Mr Vere Herbert Smith presided.

The Chairman referred to a letter from the mine superintendent, Colonel C. H. Richards, stating that the property was well equipped to deal with quartz, &c., to a depth of 4,000 feet; and as this horizon was already reached, it was necessary to instal additional machinery for the economical development of the mine at much greater depths. Colonel Richards was strongly of opinion that the outlook fully warranted the expenditure of the £170,000 which, it was estimated, would be necessary for machinery and plant and for other purposes. With this opinion the directors entirely agreed. It appeared to them that the outlook at the mines was particularly bright, as, judging from the general experience of the Kolar goldfield, there was every probability of improvements taking place in the main sections of the mine. It was almost certain that the rich shoot of ore in the northern section of the Ooregum mine, now being opened up in its lowest levels some 2,000 feet deeper than the lowest level of Nundydroog, would be met with in the latter property, and there was the expectation of the very fine shoot now being worked in the southern section of the Balaghat mine being found in the northern section of the Nundydroog.

The present capital was £283,000, and the directors were strongly of opinion that it should not be increased. They

felt that a debenture issue would be unpopular; as would also an issue of preference shares. They had been criticised for paying an interim dividend on account of the current year, but the directors saw no good reason for discontinuing dividends out of profits earned, and the question of the introduction of fresh capital was a separate and distinct matter. The directors proposed to form a new company to be called the Nundydroog Mines, Limited, or by some such title, with a capital as at present of £283,000 in 10s shares; shareholders registered on the 19th inst. to be entitled, for every share now held, to subscribe for one 10s share in the new company, credited with 4s per share paid, leaving a liability of 6s per share. Payment of the instalments had been spread over as long a period as was consistent with the requirements of the mine, the last call being due on December 1, 1921. The directors felt that their recommendation would have the approval of the shareholders, from whom a large number of proxies had been received.

Mr Edgar Taylor, alluding to the amount of new money required, said it was considered that three permanent circular shafts should be sunk below the horizon of the 4,000 feet level, and provided with electrical winding engines, and that in the meantime main winzes must be sunk for opening the mine below that level, and equipped with electrical hoists. The new vertical circular shaft, called Henry's shaft, had still to be equipped with permanent winding engine and head gear. It had to be sunk a further 850 feet to reach the 4,000 feet horizon; and its completion, as well as the other works mentioned, were essential to the future working of the mine. In the first three-quarters of the current year development had slightly decreased, and the returns of fine gold were 55,480 ounces, against 57,860 ounces in 1919. It was contemplated gradually to reduce the monthly return somewhat, and accordingly the September return was 5,753 ounces. The managers, Messrs John Taylor and Sons, unhesitatingly recommended that the new capital be found, and in their opinion the scheme now submitted was the best for the purpose under the circumstances of the case.

After considerable discussion the resolutions were adopted *nem. con.*

COLOMBIAN MINING AND EXPLORATION COMPANY, LIMITED.

INCREASE OF CAPITAL SANCTIONED.

The ordinary general meeting of the Colombian Mining and Exploration Company, Limited, was held, on the 2nd instant, at Winchester House, Old Broad street, London, Mr Shirley H. Jenks (the chairman of the company) presiding.

The Chairman said that the present capital of the company was £550,000, and it was proposed to increase it to £1,000,000. Of this increase 250,000 shares had been taken firm, and the proceeds, after paying the company's indebtedness and paying for certain properties and for the balance of the plant and its erection, as well as the expenses of the issue, would leave the company with £70,000 for general purposes, and the probability of a further £200,000 coming in in the near future. The developments at the company's mines continued to be satisfactory, and these properties had been brought to a position where they could be very favourably compared with any of the large mines in Australia or South Africa. To secure the best technical advice for the future had been a source of great anxiety to him, and he was more than pleased to have succeeded in arranging with Mr John Morgan and Mr Frank B. Powell to take control of the mines as consulting engineer and manager respectively. As an offset to transport difficulties which existed there were many and constant natural advantages which conduced to economical mining at Marmato, and there was highly efficient labour. Mr Powell had formed a favourable opinion of certain of their dredging areas, and the working capital which the company would now have would enable these and other assets in their concession to be exploited. With regard to the company's oilfields, terms had been practically arranged under which their control and management would be handed over to an important oil company, subject to confirmation by them of the statements which the directors had made. The company referred to undertook to place their experience at the disposal of this company, and to find whatever money was necessary, with certain limitations, to develop these properties fully. He did not think they could have done better than place themselves in the hands of people having such great resources, skill, and facilities for obtaining the requisite plant for the development of the properties, tankers for transporting the oil, and an organisation for the marketing of such oil in those parts of the world where it was most suitable for it to be sent. The right was reserved to this company and its associates of putting up half of any further capital which might be required for either of the properties.

The report was unanimously adopted, and the proposed increase of capital was duly authorised.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

		Japan	9,500
Total value of imports of gold	620,601	Total declared value of exports registered in the week	5,704,232

Messrs Samuel Montagu and Co. write on November 4th as follows :—"Gold: The Bank of England gold reserve against its note issue is £121,678,420, a slight decrease of £345 as compared with last week. The bulk of the moderate amount of gold which came into the market this week was taken for the United States, and the small balance for India. It is reported that the Gold Producers' Association of Australia have sold the balance of their gold output for this year to America. The price for the 164,700 fine ounces was £5 16s 8d. f.o.b. Sydney. During the first eight months of the year there was an import into Japan of bullion to the value of about 109,000,000 yen. This import is interesting in view of the continued adverse trade balance, which amounted to nearly 500,000,000 yen on July 31st. A partial explanation is that, owing to severe depression, delivery is withheld to a very great extent, and goods are kept in storage at the Customs godowns and private warehouses under hypothecation to exchange banks. When such goods go into consumption banks have to look elsewhere for funds to finance export trade. Other reasons are the re-export of commodities such as Java sugar and the withdrawal of investments in foreign securities. Large amounts of gold have since been shipped to Japan. We hear that gold valued at 91 lacs of rupees was shipped from India to Japan this week. Currency: The mintage of base metal, other than copper or nickel, still prevails in Germany. Up to the end of August, 53,300,000 marks of aluminium coins had been minted. Other coins minted up to the same date were iron coins, 71,800,000 marks, and zinc, 56,800,000 marks; so that in all about 181,200,000 marks of these coins of small denominations have been struck. The *Times* Paris correspondent stated that the dies and metal for the new tokens, which are to replace the much-soiled 50c, 1f, and 2f notes, are now ready, and the Mint is only waiting the authority of the Chamber of Commerce of France, which is responsible for their issue. Silver: Prices have shown an upward trend owing to the scantiness of supplies, and some purchases on account of the Indian bazaars. China acquired a fair amount of silver in the United States during the early part of the week, the price ruling there being more favourable than that in London, but, as rates rose, the demand subsided. Whilst Chinese trade remains in its present lifeless condition, the undertone cannot be said to have improved, for demand for India, owing to the poor monsoon, can hardly be energetic. Indian exchange is steadier for the moment, but any connection between this fact and the interest taken this week by the Indian bazaars in the precious metals is not evident. It is reported from the U.S.A., under date October 16, 1920, that 18,946,371 ounces of silver had been purchased under the Pittman Act. The Mexican coinage report for July, 1920, states that during that month there were coined 1,800,000 pesos in gold, 3,730,000 pesos in silver, and 50,000 pesos in bronze. Calculating the silver contents of the silver coins as 12 grammes the peso (as per decree of October 31st last), this indicates mintage at the rate of 17,000,000 ounces a year. The quality of the coin was authorised to be 720 parts in the 1,000 fine.

Reports and Notices.

The Central Commercial Department of Sir W. G. Armstrong, Whitworth, and Co., Limited, has removed from 3 Woodstock street, Oxford street, W. 1, to 10 Great George street, Westminster, S.W. 1, the London head office of the firm.

We understand that Sir Edmund Wyldbore-Smith, formerly assistant-secretary to the Board of Trade, has been elected a member of the board of B. S. T., Limited, in place of Sir Phillip Lloyd-Greame, M.P., who has resigned his seat owing to his appointment as Parliamentary Secretary to the Board of Trade. Sir Edmund Wyldbore-Smith is a director of the Suez Canal Company and the Metropolitan Carriage, Wagon, and Finance Company.

Messrs Jeremiah Lyon and Co., Limited, have removed their offices from 4 Lombard court, E.C., to 8 Paternoster row, E.C. 4.

Mr Hugh Lewis, the newly-appointed general manager and secretary of the Liverpool and London and Globe Insurance Company, was entertained on November 4th to a complimentary dinner at the Carlton Hotel by past and present members of the Central Insurance Company, Limited, of which he continues to be the general manager.

Mr T. J. Callaghan, of Cambrian buildings, Cardiff, has been appointed a director of Guest, Keen, and Nettlefolds, Limited.

RAILWAYS.

CORDOBA CENTRAL RAILWAY.—The report for the year ended June 30, 1920, states that gross receipts were £3,116,415, increase £784,197; and working expenses £2,432,617, increase £620,116; leaving net profit £683,798, increase £164,081. Percentage of working expenses was 78.06, against 77.72. To the net profit is added balance of interest and exchange accounts, transfer fees, &c., £382,445, making £1,066,243. Deduct one year's interest on 4 per cent. first debenture stock, £320,000; on 6 per cent. second debenture stock (1923), £7,206: on 5 per cent. second debenture stock, £296,552; and provision for income and corporation taxes, £200,000; leaving a balance of £242,484, which has been carried to the balance-sheet in reduction of the amount standing at the debit of net revenue account.

MISCELLANEOUS.

SECOND EDINBURGH INVESTMENT TRUST.—The report for the year ended September 30, 1920, states that at that date the amount invested in British Government securities was £279,000. The other funds are distributed over 247 investments, being an average of £3,320 in each. There has been realised from the sale of securities a net profit of £3,288, from which has been deducted the expenses in respect of the increase in authorised capital amounting to £2,091, leaving a balance of £1,197, which has been applied in writing down the cost of investments. The investments, according to the usual valuation made at September 30th, were then worth over £135,000 in excess of the amount at which they appear in the balance-sheet. After providing for interest and expenses of management, the net revenue, exclusive of profit on realisations, amounts to £53,156. From this there falls to be deducted preferred stock dividend to July 31, 1920, £9,450, deferred stock interim dividend of 6 per cent., £6,300, leaving an available balance of £37,406. The directors recommend a final dividend on the deferred stock of 9 per cent., making 15 per cent. for the year, less tax at 6s, carrying to the credit of surplus revenue £27,956. The balance at the credit of surplus revenue will then be £90,418. The directors also recommend that out of the foregoing surplus revenue 50,000 deferred shares of £1 each should be issued as a bonus to the deferred stockholders.

PICCADILLY HOTEL.—The report for the year ended July 31, 1920, states that, after providing for interest on mortgage and the fixed interest on 6 per cent. participating debenture stock, the net profits amount to £23,844, from which must be deducted the additional interest due to holders of 6 per cent. participating debenture stock, leaving a balance of £16,838, which with the amount brought forward, £4,468, makes a total of £21,306. The directors recommend a final dividend of 7d per share, free of tax, which together with interim dividend of 9d paid April, 1920, amounts to £20,000, leaving to be carried forward £1,306. The additional interest on the 6 per cent. participating debenture stock, together with the balance undistributed in previous years amounting to £1,496, will allow of a distribution of 3½ per cent. for the year to the stockholders, which will amount to £7,897, and the balance of £605 will be placed on deposit with the company's bankers in the names of the debenture stock trustees for division hereafter.

BRISTOL UNITED BREWERIES.—The report for the year ended September 30, 1920, states that, after writing off all bad debts, decrease in value of leasehold licensed premises, and charging to revenue licence duties, compensation fund charge, amounts for keeping premises and plant in repair, the available profit is £78,548, to which has to be added £20,872 brought forward. Provision (estimated) is made for excess profits duty and corporation profits tax. The directors recommend a final dividend of 1s per share, together with a bonus of 1s per share on 276,000 £1 shares, making 15 per cent. on the ordinary shares for the year, leaving £30,143 to be carried forward.

BOOKS ON FINANCIAL SUBJECTS

By HARTLEY WITHERS,

Editor of "The Economist."

"Numerous instances of the wisdom of Withers, culled from a ripe experience and put into literary shape by a trenchant and occasionally caustic pen."—*Financial News.*

"The happy touch of literary simplicity and wit combined with an expert knowledge of his subject which has given distinction and popular value to his books."—*The Times.*

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Favourable weather prevailed during the past week for sowing operations, and in some parts the young plant is above ground, while of healthy appearance. Root crops have also improved, and winter keep is plentiful. Threshings continue on a fair scale and returns show variable quality, though slightly better results were obtained generally. Offerings of native wheat met a steady demand, especially for good milling grades, which

at official rates, while in ample supply. Reports respecting the new crops of Australia and Argentina continue very satisfactory, and a start should be made on harvesting them in a few weeks hence. There is a steady inquiry for G.R. flour, which shows improved quality, but offerings of imported were less attractive, and again included a certain proportion of the Oriental variety. Quotations remained unaltered at 86s, ex mill, for English, and 81s 9d to 93s imported, according to quality, per sack of 280 lbs, ex store. Maize, after being easier, marked a slight improvement on firmer c.i.f. offers. Plate, ex ship 62s and 64s 6d landed. Forward business was on a moderate scale, and prices irregular but firmer on balance, with sales of Plate parcels afloat (bags) at 58s 9d to 59s 3d, September-October 59s, October-November 58s, 57s, 58s 6d, November-December 57s 6d to 58s 9d, December-January 58s 3d to 59s 3d per 480 lbs. Cargoes neglected and nominal. Oats dull, and tendency easier for all descriptions. English ranges from 55s to 65s per 336 lbs, according to quality and description, and Plate f.a.q. 49s 6d, clipped 50s, per 320 lbs, landed. On c.i.f. terms few sales occurred, including Plate, January-February, 42s to 41s 6d, No. 2 Canada Western, afloat, 49s 6d. Barley dull for imported, but English malting firm, with a good demand for fine to choice samples at 110s to 115s, useful to good bold 92s to 105s, grinding sorts ruling from 70s to 82s per 448 lbs. Californian, ex ship, 90s to 102s; Morocco, landed, 78s 6d per 448 lbs; No. 4 Canada Western, 69s 6d; Canada feed, 68s; Plate, 70s, landed, per 400 lbs. On c.i.f. terms only limited dealings were recorded in superior Californian afloat to outports at 87s; ditto, arrived, 90s; December-January, 87s 3d, per 448 lbs. Beans dull of sale and rates the turn easier. English springs, 98s to 102s 6d; new winters, 78s to 85s, per 532 lbs; Chinese horse beans, £17 10s to £18 per ton. Peas quietly steady at late rates. Lentils firmly held. No. 1 split, 45s; No. 2, 42s, per 100 lbs. Oatmeal in moderate request and prices easier. Scotch quoted £37 to £42. American £36 10s to £38 per ton. Homeward grain chartering from the River Plate ruled quiet for early loading, and rates weaker at 85s done to U.K./Continent, November, up-river; but for new season several fixtures were reported at 90s, heavy grain, January-March. North American quiet at 13s to 13s 6d per qr Antwerp/Rotterdam, 14s North Spain, and 16s Mediterranean, with 12s the nominal rate to this country, Gulf loading being 1s per qr more money in each case. Karachi has taken several realised the maximum price, but less money had to be accepted for lower qualities. Imported descriptions moved off quietly

THE IRON AND COAL TRADE.

Our Glasgow correspondent (writing on Thursday) says:—A more cheery feeling than has been experienced for some weeks back rules in iron, steel, and coal trade circles to-day, thanks to the official ending of the miners' strike, though it is calmly realised that some more weeks must elapse before general industrial affairs can possibly recover to their normal state. It has now been announced that there is to be no downward change in the prices of pig-iron for this month, and it is added that there is no prospect of reductions until at least supplies have been materially increased. Demand for both the home and the export markets is very keen, with numerous buyers anxious for Scotch ordinaries for delivery into the first quarter of 1921, and that, though Continental producers are sellers at substantially lower figures than are named here. It is noted, at the same time, that foreign sellers are not, when close quarters are reached, overanxious to commit themselves for any period ahead at current values. Their transactions appear to be confined to the covering of prompt cash necessities. Last week, despite the reputed home scarcity, a couple of hundred tons of Scotch pig-iron were shipped to Holland. There is no change of consequence to record in the conditions prevailing in shipbuilding, engineering, brass founding, and general machinery departments, all of which have managed to pull along in a fairly satisfactory way, and recovery in deliveries of plants for export will now proceed steadily. In the finishing branches in iron and steel, in black sheet connections, and particularly in tubes and such like, a good measure of activity is in evidence, and it is advised that in all these relations export inquiry is good—and that for Southern Europe, Denmark, India, the Australian colonies, and South America. Leading firms are satisfied as to the future, provided the tonnage outputs in coal, steel, and iron are sensibly added to promptly.

Our Sheffield correspondent writes:—It is expected that work generally in the steel trade will be resumed on Monday, although the damping down of so many blast furnaces will create a serious delay to operations from the scarcity of pig-iron. The stocks and limited output of the blast furnaces during the strike have been absorbed by the foundries, most of which have been kept going. The stopped furnaces will have to await the conversion of the coal, as soon as it begins to be got out, into coke, a process which occupies two or three days. It is just possible that some of the foundries may have to go on short time until sufficient pig-iron can be produced. Quieter conditions in the steel trade are indicated by the reduced demand for basic pig. The outlook for steel is far from satisfactory. Nevertheless, some recovery of confidence can be discerned, and it is believed that a good deal of foreign business would be placed if makers were prepared to give firm quotations. Belgian, German, and French competition in certain classes of steel is becoming very serious, because the state of exchanges enables the makers in those countries at such low prices as put the British firms quite out of the market. The trade is demanding Government assistance in combating this unusual form of competition. There is no decline in the demand for tools used in the building trades and agriculture, and the output of the various kinds of saws is so inadequate that makers are rationing their customers. Spanners, wrenches, and hammers can also be sold faster than they can be made. Cutlery makers are feeling severely the revived German competition, German scissors, razors, and pocket-knives being now freely offered in the British and Continental markets at cut prices. There is a brisk inquiry for steel castings and steel sheets. Makers of wire rods are being undersold by both America and Germany. This cheaper material has enabled the makers of the common wires to reduce their prices. Tungsten, the principal alloy of high-speed steel, has lately been reduced 2d to 2d per lb, and is only 6d per lb dearer than before the war. German tungsten is again being offered.

Our Middlesbro' correspondent's report, dated November 4th, is as follows:—Pig-iron: Most of the blast furnaces in this district have been damped down during the coal miners' strike, and it will be some time before they regain their normal output. During the strike business has been practically suspended. Prices remain unchanged at 225s per ton for No. 3 and No. 4 foundry pig-iron, and 260s per ton for mixed numbers East Coast hematite, for home consumption. Manufactured iron and steel: Work at the local steel works will be resumed as soon as possible, but in some cases there will be delay until regular supplies of pig-iron of proper quality are assured. Prices remain unchanged, as follows:—Steel ship plates (home), £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: Deliveries have been practically stopped during the strike, but will now be resumed, as some of the works are short of stocks. The nominal quotation for best Bilbao Rubio is 50s per ton, c.i.f. Tees, on the basis of 17s freight.

MANCHESTER, November 4.

Business in the market during the week has not increased in volume. Favourable developments in demand have been checked by the lack of stability in raw cotton rates, and buyers have hesitated to commit themselves to large lines. It is now apparent that the larger turnover a fortnight ago was due to speculative operations, and merchants are now waiting for better advices from distributing centres abroad before purchasing to a further extent. Scattered sales for India, chiefly for Calcutta in light fabrics, have totalled to moderate dimensions, but bids in standard makes are being raised very slowly, and the position of exchange is against free operations. There have been no signs of activity for China. Several minor outlets, especially in the Near East, have given fair support in a variety of goods. A little more buying has been mentioned in home trade cloths. Some manufacturers have obtained relief, and are now holding out for better prices. American yarns for home use have been distinctly quieter, and prices have been somewhat irregular when tested. Export bundles have been sold in fair lots for the Levant. Business in Egyptian spinnings has been of a limited character.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is a slightly better tone to the market and prices are somewhat steadier, though in most cases quotations are still more or less nominal. It cannot be said that new business is being booked on a larger scale, but there are some inquiries for wool and tops, and apparently some firms will soon have to buy in order to keep their machinery running. The lack of new orders in the piece trade remains the most troublesome feature, and it is generally admitted that trade in the other sections of the industry cannot improve until there is a wider outlet for the finished goods. At the same time, some members of the trade believe that wool prices are now at about the bottom, and that this may influence buying at the other end. Certain it is that values in Australia are on a very high level, and it would not be surprising if really good combing wools sold in London next week at par to 5 per cent. dearer compared with the close of the last series of auctions. The weakness is still found in medium and low crossbreds, and it will require a big Continental demand to bring relief in this direction.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Preparations are being made by the selling brokers for the London auctions to begin next Tuesday. It is understood that several firms must buy or let their mills stand, and during the past fortnight there has been a continuous inquiry by buying brokers and topmakers in Bradford for good combing merinos. There is no justification for higher prices, but some anticipate that the best combing merinos will be the turn dearer. Some go the length of saying that they will advance fully 5 per cent. If they do, it can only be the outcome of present temporary requirements, for there is nothing at the piece end of the trade to warrant higher values. However, the reports from overseas markets are better, America buying good merinos fairly freely. The very fact that the Plains brand sold up to 44½d for fleeces, averaging 37d, shows that there is a satisfactory demand for superior merinos, but the significant statement is made by Dalgety and Co., Limited, "that other sorts are difficult to sell." Of course, the Plains clip is among the best, and has been offered in Coleman street during the past two or three seasons, fetching very big figures. This brand of wool was appraised in Melbourne last season at 30d for the two top lots, this season's prices showing a very sensible advance of nearly 50 per cent. Super West Victorian merinos may be expected to meet with a good demand throughout the season.

It is understood that Colonial wool to the value of £800,000 has been sold to the Austrian Government, though nothing is said as to what qualities have been disposed of, or on what basis. These facts would be very interesting to the entire trade, but I expect that no information will be forthcoming. It has been stated that as the bulk of the wool is going to one particular firm interested in the manufacture of merinos, that will be the class of wool sold, but this is doubtful. It is hard to believe that one firm will take such a large amount of Colonial wool, when there are several mills capable of using both merinos and crossbreds. The question has been asked if the mills in Czecho-Slovakia are going to participate in this deal, or whether a combination of manufacturers in Brunn or Prague is going to deal separately with the Ministry of Munitions.

It is understood that efforts are being made privately to establish strong financial combinations with a view to purchasing raw material in order to get it to Germany and other Continental countries. I see no reason why any serious objection should be taken to the British Government selling raw wool to Continental countries, and providing the sales are made at issue prices then the home trade need not fear undue Continental competition. So long as mill owners on the Continent cannot buy wool at to-day's rates of exchange, I think the British Government is in the best position to give extended credit, and in so doing is directly benefiting the taxpayers of this country and materially helping in the rehabilitation of Continental textile trades.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

A very quiet tone is the characteristic of the market, and very little business seems to be passing in any department. On the contrary, there is a strong disinclination to trade until the industrial situation clears, and there is some tangible indication that the turn of the tide has come. Linseed oil, which rallied substantially after a severe set-back, is again on the down grade, and has been very largely neglected, in spite of lower prices, which signally fail to revive demand. Large consumers appear to have met their immediate requirements, and are in no hurry to again enter the market. Oil, spot and near, is easier, and has reacted about £3 on the week, but the January-April position is fairly steady. Only a small trade in cotton oils, chiefly of soap-making grade, has been done, and prices show but little change. Soya oil is not in great supply, and has to meet the competition of imported Oriental, which is offering at lower prices than the Hull product.

The seed market is barely steady, and quotations of linseed, though not exhibiting much change in the net, have a decided tendency to fluctuate, and are inclined to lower. In view of the small oil demand, crushers have no occasion to buy, as supplies in hand and on passage are considered ample for the time. Egyptian cottonseed has again fallen in value, and Bombay has followed suit, but both are steady at the decline. Linseed, on passage to the U.K., is returned at 56,400 tons, and to the Continent 49,000 tons; and cottonseed 28,600 tons, solely to the U.K. A small quantity of rapeseed is on passage from India to this country, but the bulk of 26,100 tons afloat is destined for mills on the Continent. The production of both oil and cake in the U.K. just now is very small, many of the mills not on short time working only intermittently.

FUR SALES.

The official report of the London Fur Trade Association (Inc.) on the October raw fur skin sales states that business has been far from active since the May sale, partly owing to reasonable quietness, but chiefly on account of financial conditions and industrial unrest. A certain amount of pressure was brought to bear from the United States, but unsuccessfully, with the object of

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

securing the postponement of these sales, as has been done in America. The range of values established will form a basis for future operations for the fur trade in all countries. Prices as a whole again show a decline. The collections, however, consisted mostly of stale goods. The high values of last January, brought about solely by reckless American speculation, could not possibly last. A safer and sounder basis of prices had to be found, and the sooner this was done the better.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

At the public auctions held here in Bermondsey on Thursday last, best ox and heifer hides made from ⅛d to ¾d per lb less money; cows were easier in value to the extent of 1d. per lb, while bulls were ¼d per lb down for bests and ⅛d up for seconds. Calfskins made more money on the average, heavies being ⅛d to ⅜d up, with the lighter weights making last week's figures. Sheepskins were from 4d to 1s 6d per skin dearer.

Reports as to the conditions on the local leather market are all to the effect that the position is very bad indeed, due to the recent trouble with the miners—now happily ended—and the lack of anything like a demand for leather. This latter is not improved by the unsettled condition of prices, and it is stated in some quarters that if a prospective buyer shows any signs of hesitation at an offer made it often happens that the suggestion of a concession is the next move made by the seller. This naturally does not conduce toward stability in the market, with the result that what little business there might be done usually hangs fire for a longer period than usual. Little sole leather has changed hands during the week, and where deals in bends have been effected it has usually been at lower values. Shoulders and bellies have received very little inquiry, and it is reported that considerable quantities of these goods are on offer at what appear to be tempting prices.

Business with upper leather merchants continues very inactive, and stocks are mounting up. I understand that in view of the present poor demand the glacé kid tanners have agreed to reduce their import to 50 per cent.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 5.

A quiet condition of affairs again governed the chief markets, consumers showing little or no disposition to depart from the hand-to-mouth policy followed for some time past; while the obtaining of financial accommodation being by no means an easy matter, also tends to keep trade in check. There was some inquiry for certain articles on near continental account, but same is somewhat spasmodic.

SUGAR.—The market for free parcels experienced a better demand at the lower rates now in force, and Canadian and also American granulated sold, 95s to 95s 6d; white Mauritius, 95s to 96s; crystallised West India, 80s to 83s; muscovado from 58s to 63s. American syrup very slow, and useful kinds sold, 33s, with good middling, 35s.

COFFEE.—General course of trade proceeded slowly this week, demand for the cheaper varieties having been largely satisfied after the recent liberal purchases, while home trade requirements do not extend. In auction supplies were on a moderate scale, and largely bought in. Fair to gold Nairobi sold, 90s to 100s; and extra bold hard Vera Paz up to 128s. Futures weaker. December sold, 57s 6d to 56s 6d; March, 57s 6d.

COCOA.—No public sales were held this week, and by private treaty trade was confined to narrow limits, including Trinidad at 77s to 83s, and West Coast African, 64s to 65s.

TEA.—In auction 40,200 packages Indian and 19,900 packages Ceylon were offered, and with better and well distributed competition prices in all cases were dearer, medium kinds being from 1½d to 2d per lb higher than recent lower level.

RICE.—Market very quiet and featureless, with trade purely retail. Rangoon bran is quiet, and market largely nominal. Peas also. Beans sold slowly.

SPICE.—Pepper market remained in a quiet state. Fair black Singapore, spot, sold, 5½d; November-January, 5¾d. Aleppy, spot, 6¾d, sellers. Tellicherry, 7d. White Singapore, spot, 1s 2¼d. Muntok, ditto, 1s 2⅜d; ditto, November-January, 11½d. Zanzibar cloves, sold, quoted 1s 6d to 1s 7d, as to quality. Pimento, spot, sold, 3¾d. Ginger dull, unaltered. Tapioca steady, quiet. Fair flake, spot, sold 2d per lb; ditto, to arrive, October-December, at 20s per cwt. Fair Penang seed pearl, spot, done, 24s 6d; small sago, November-January, at 30s. Sago flour, October-December, 20s 6d. Farina, Japanese, October-December, 26s. Desiccated coconut, fine cut, spot, 80s; medium, 84s; half-and-half, October-December, sold, 74s.

JUTE.—Actual transactions during the week were restricted, but with reserve on the part of sellers prices maintained a very steady level. Native first marks assortment, new crop, new group, November-December, sold, £49 to £49 10s; subs, £45 10s; Daisee No. 2, £43; lightning actuals, £36; subs, £34 10s. Calcutta hessians and twills neglected, with quotations nominal.

FRUIT.—The market for currants keeps quiet, and Pyrgos quoted, 78s to 80s; Gulph, 92s to 95s; Vostizza, 98s to 108s. Valencia raisins firm, with a good demand during the week. Halves sold, 124s to 128s; quarter-boxes, 130s to 160s. Sultanas also met a sustained demand, and new, on spot, sold, 136s to 148s; choice, 160s. Figs: Layers, 148s to 150s; pulled, 200s to 210s. Dates steady, but quiet, and a good many parcels will arrive unsold. Hallowee, first tide, quoted 47s 6d.

HEMP.—Manila quiet and rather unsettled, and limited sales include J grade, November-January, at £63; and K, October-December, £55. New Zealand dull, and points, October-December, sellers, £54, with fair £52. Italian neglected. East India steady.

SHELLAC.—Easier prices ruled in auction for the quantity offered, and sold without reserve. Fine strong orange, matted to free, sold, 650s to 690s. A.C. garnet, cakey, 465s to 485s. Buttons, No 1, pure, 640s to 670s.

COPRA.—Market dull, with rates weaker on balance. F.M.S. Straits, November-January, London, sold, £57 10s to £54 5s and £55 5s; ditto, Rotterdam, October-December, £59 to £56 10s and £57; November-January, £58 to £55 10s and £56. Ceylon, November-January, London, £55 10s and £56 5s. Palm kernels, November-January, done, £38 to £36 10s and £37 15s.

EGG PRODUCTS.—There was trade stirring this week as sellers denoted more willingness to meet the market. Liquid yolk, spot, old season's, sold, 80s; new, 102s 6d; ditto, November-January, 90s; December-February, 92s 6d; liquid whole egg, spot, 80s per cwt.; dried yolk, spot, sold, 8d; native dried whole egg, spot, at 9d to 9½d; spray, ditto, 1s 4d; albumen, spot, 4s 7d; November-January, 4s 3d per lb.

MENTHOL.—Spot sellers, 28s 6d; Japanese peppermint oil, 6s 3d; aniseed, 3s 9d; slab camphor, 5s 9d per lb; Japan wax, spot, 114s per cwt.

RUBBER was a depressed market on continued heavy liquidations. Plantation crepe, spot, sold, down to 1s 2d; December, 1s 2¼d to 1s 2½d; January-March, 1s 3d to 1s 3½d; January-June, 1s 3¾d to 1s 4d; April-June, 1s 4⅜d to 1s 5¼d. Smoked ribbed sheet sheet, spot, sold, down to 1s, then 1s 0⅜d; December, 1s 1d; January-March, 1s 1½d to 1s 2d; April-June, 1s 3d to 1s 3⅛d. Fine hard Para, spot, 1s 5d.

OILS.—Linseed easier. Spot, net, naked, 67s; November-December, 65s. Rape quiet. Crude, spot, 74s; refined barrels, 85s. Cotton quiet. Crude Egyptian, 61s; Bombay, 51s; refined edible, 77s. China wood firm. Hankow, spot (barrels), 110s; and Hong Kong, spot, 107s. Palm kernel quiet. Crushed, spot, 80s; extracted, 79s. Coconut quiet. Ceylon, spot, 92s; September-November, 90s; Cochin, ditto, 92s 6d. Soya quiet. Oriental, afloat, 69s; October-December, 69s; deodorised, 91s. Japan fish quiet. November-December (cases), 40s. Cod liver steady. English, spot, 45s. Groundnut steady. English crushed, naked, spot, 81s; deodorised (barrels), 100s. Turpentine easier. American, spot, 123s; November-December, 124s; January-April, 124s 9d. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum steady. American, spot, 2s 3¼d; and water white, 2s 4¼d per gallon.

OILSEEDS.—Linseed: market quiet. Calcutta, afloat, £36; November-December, £35 10s. Bombay, October-November, £36 5s. Plate, afloat, Hull, £31 10s; November-December, £30 15s to £31; January-February, new crop, sold, £30 10s to £30 15s and £31. Rapeseed firm. Toria, November-December, sellers, £34 10s; real bold Ferozepore, £33 10s; brown Cawnpore, £31. Cottonseed quiet, London. Egyptian, f.a.q., spot, London, sold, £19; November-December, £18. Bombay, spot, Hull, £13; October-November, £13. Gingelly firmer. Chinese, November-January, to Continent, sold, £43 10s. Groundnuts quiet. West African (in shells), afloat, £78.

METALS.—Tin, on selling pressure, continued a declining market until the middle of the week, cash fluctuating down to £262 10s, and three months to £264 10s. After a firmer opening at Thursday's meeting, values soon relapsed, while these dates were selling to £259 10s and £264 respectively. At Friday's session the time was easier, chiefly forward, cash selling at £258 to £259 10s, late January at £262 10s, and three months £263 to £262 10s. English ingots £256 to £257. Copper: The standard market exhibited an improvement, cash by Tuesday advancing to £91 15s and three months to £90 5s, a further advance being established until Thursday, when end of December registered £92 10s and three months £91 10s to £91 15s. At Friday's session values declined, cash being sold down to £92 5s, late December to £91, and three months to £89 5s. Electros, £100 £102; best selected, £99 to £100; strong sheets, £152. Lead steady for near and easier forward at £35 15s to £35. Spelter slightly weaker at £37 10s to £39 5s. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £100 to £102.

TALLOW.—Messrs Colchesters and Woolner write on November 3rd as follows:—The tallow market was quiet during the week, and prices were mostly unchanged. There is more inferior tallow offering than appears to be required for the moment. The stock in London on October 30th, as returned by the wharves, amounted to

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

17,871 packages, being a decrease during the month of 3,017 packages. At auction to-day 1,885 casks tallow were offered, and 485 were sold. Quotations are:—Australian mutton: Fine, 76s; good to fair, 73s 6d to 68s; dull to dark, 62s to 55s; hard, 69s. Australian beef: Fine, 85s; good to fair, 70s 6d to 66s; dull to dark, 60s 6d to 57s; sweet, 87s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 70s; and mixed, 43½, c.i.f., London, 67s. The market letter is lower. Tallow, 2s; stuff, 4s. Town tallow, 58s per cwt. Rough fat per 8 lbs, 6½d to 1s 2½d; melted stuff, 42s per cwt. Quotations are:—Town: 56s net cash, naked, ex works. Country: Frail casks, 52s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 58s to 54s. Bone fat: White, none; pale, 53s; benzine, 49s; melted stuff, 48s, f.o.b.

Insurance.

You have probably insured your business and home to protect yourself against fire.

Have you insured your life to protect your family against your early death?

INSURE YOUR LIFE and HOME with the

PRUDENTIAL ASSURANCE Co., Ltd.

REFUGE ASSURANCE COMPANY LIMITED.

Chief Office: Oxford St., Manchester.

For the year ending December 31st, 1919.
Annual Income Exceeds £5,400,000.
Assets Exceed £17,300,000.
Claims Paid Exceed £30,000,000.

BRITANNIC ASSURANCE CO., LTD.

Life and Endowment Assurance business in all branches.

ANNUAL INCOME	£2,300,000
TOTAL FUNDS	£5,800,000
CLAIMS PAID	£14,800,000

Chief Offices:—
BROAD STREET CORNER, BIRMINGHAM.

LONDON AND MANCHESTER ASSURANCE Co., Ltd., 50 Finsbury square, London, E.C.2. Premium Income exceeds £1,000,000. Funds exceed £2,500,000. Claims paid exceed £5,500,000. Annual Reports and Prospectuses can be obtained on application.

Publications.

To all Temporary Officials.

A Book you simply cannot afford to do without.

THE CORPORATION PROFITS TAX

BY

RAYMOND W. NEEDHAM

Sometime an Accounting Officer under H.M. Treasury; and of the Middle Temple, Barrister-at-Law.

Cloth. Crown 8vo. 7/6 net.

The Corporation Profits Tax is imposed on the profits of all limited liability companies; and it is manifestly of the utmost importance for the secretaries and other responsible officials of such companies, and for solicitors, accountants and auditors, to obtain at the outset the clearest possible insight into the precise meaning and effect of the various provisions. In this way and in this way alone can they ensure "getting started right."

Obtainable at all booksellers or from the publishers. Post Free 7/10.

Send to the Publishers for Prospectus.
LEONARD PARSONS, Ltd., 19, Portugal Street, Kingsway, W.C.

BARRISTER seeks active interest in sound established London business where capital required for satisfactory reasons.—Write, H. F., c/o Tillotsons' Newspapers Ltd., 23 Fleet street, E.C. 4.

PROVINCE OF QUEBEC

FOUR AND A-HALF PER CENT. REGISTERED STOCK, 1954,

For the purpose of preparing the Interest Warrants due 1st January 1921, the BALANCES will be STRUCK on the evening of the 1st December, 1920, after which date the Stock will be transferred ex-dividend.—For Bank of Montreal.

G. C. CASSELS, Manager.

No. 47 Threadneedle street, E.C. 2,
1st November, 1920.

LAKE SUPERIOR CORPORATION

FIRST MORTGAGE COLLATERAL TRUST FIVE PER CENT. GOLD BONDS.

The Lake Superior announces that the Interest COUPONS of the above-mentioned Bonds, maturing 1st December, 1920, may on and after the 15th November, 1920, be PRESENTED between the hours of 10 and 2 o'clock (Saturdays excepted), for PAYMENT at the rate of 4.86⅔ at the Bank of Montreal, 47 Threadneedle street, London, E.C.2, or its branches in Montreal, or New York. Three clear days are required for examination. Lists may be obtained on application at the Bank.

THE
Investors' Monthly Manual
(Established 1864).

An indispensable Work of Reference to everyone interested in the movements of Stocks and Shares; and absolutely free from connection with any financial house or speculative agency.

Publishing and Advertisement Offices:
3 Arundel St., Strand, London, W.C.2.

To Holders of 5% EXCHEQUER BONDS

(Redeemable December 1st, 1920)

HOLDERS of these Bonds are offered the opportunity of tendering them as the equivalent of cash in payment for Treasury Bonds of equal face value.

This offer holds good until November 29th, and investors should avail themselves of it without delay, thus obtaining, without any additional outlay, a higher rate of interest on an equally sound British Government Security.

Exchange into TREASURY BONDS and get Higher Interest

This is an advantageous exchange for the holder of Exchequer Bonds. He gets his full interest at 5% on these up to December 1st. In addition he gets 13 days' interest (November 18th-December 1st) on his Treasury Bonds, at the rate of 7%. He is guaranteed a further (half-yearly) dividend at the same high rate on May 1st, 1921, and at no time can his interest fall below 5%.

By exchanging into Treasury Bonds he also obtains the legal right to claim and secure repayment of his capital *in full* at the end of 5 years—an important safeguard against depreciation.

Any Banker or Stockbroker will undertake the exchange of 5% Exchequer Bonds into Treasury Bonds of the present series. But it is important to take the necessary action in good time—November 29th is the last day upon which this exchange can be effected.

Helping to reduce the Floating Debt

The national importance of an adequate subscription to the new series of Treasury Bonds will be appreciated by all who realise the vital necessity of a reduction in the Floating Debt. The whole of the money invested in Treasury Bonds will be used to lessen the amount of this Debt, and so will tend to reduce the cost of living, to liberate funds for productive purposes, and to strengthen British credit throughout the markets of the world. Bankers, Traders—all whose interests are bound up with the prosperity of British Commerce, Industry and Finance—are asked to co-operate in making the new series of Treasury Bonds a success, both by investing any money available for the purpose in these Securities and by influencing others to do the same.

THE MONEY MARKET.

MONEY became distinctly scarcer during the course of the week, and on Thursday 6 per cent. was occasionally paid for loans over the night. Yesterday, however, the supply of credit was rather more comfortable. The market was puzzled by this development, and attributed it to tax payments, withdrawals by Scottish banks, and the deadlock in Australian trade, which restricts the lending power of the colonial banks. It is also suggested that some of the clearing banks may be holding larger balances in preparation for the publication of periodical statements showing their average position, discussed by Dr Walter Leaf in

his speech, referred to on a later page. It certainly seems desirable that preparation of this kind should be gradually carried out, so that the beginning of publication should cause as little disturbance as possible. Discount rates hardened slightly, and the position of commodity prices made the tone of the market cautious.

* * * *

The Bank return showed a considerable improvement. The stock of gold rose by £331,000, and the note circulation declined by £590,000, and there was thus an increase of £921,000 in the Reserve. At the same time, there was a decrease of nearly two millions in the total securities, and the total deposits were thus nearly a million lower, Other declining by 2½ millions, while Public rose by 1½. These changes restored the Reserve's proportion to 10.6 per cent. The circulation of Currency Notes was reduced by £1,903,000 to £354,081,700, which includes £2,984,200 for notes called in but not yet cancelled. The fiduciary issue is now £303,847,400, or £16,752,600 below the maximum.

* * * *

The Helsingfors (Finland) Bank rate was advanced 1 per cent. on November 8, 1920, to 9 per cent. It had stood at 8 per cent. since March 22, 1920.

* * * *

The Bank of Bombay rate of discount was advanced 1 per cent. to 6 per cent. on November 4, 1920. It had stood at 5 per cent. since July 29, 1920. The Bank of Bengal rate was advanced 1 per cent. on November 4th to 6 per cent. It had stood at 5 per cent. since July 1, 1920. The Bank of Madras rate of discount was advanced 1 per cent. to 7 per cent. on November 10, 1920. It had stood at 6 per cent. since July 20, 1920.

* * * *

The following table shows Public Income and Expenditure for the week ended November 6, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	18·434	Supply Services	11·643
„ Borrowings	4,807	Interest on Debt	11·861
„ Exchequer Bank Balances	·672	Sundries	·409
	23·913		23·913

These operations increased debt by a sum of £4,807,175, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 4·198	American Loan repayment	— 1·229
Treasury Bonds	+ ·170	Surrenders of Bonds, &c.	— 1·521
Advances by Public Departs.	+ 2·250	National Savings Certificates	— ·050
Advances by Bank of England	+ 1·000	Sundries	— ·011
	+ 7·618		— 2·811

Sales of National Savings Certificates amounted to £550,000, but £600,000 went out in payment of Certificates maturing. The sum of £1,229,221 went towards repayment of the American Loan, making the total amount devoted to this purpose £59,229,221, which, we understand, practically completes this operation, which has been most successfully carried out. The floating debt was increased by £7,505,000.

* * * *

In the foreign exchange market the week has been feverish, with violent fluctuations, and a general concentration upon London of the brunt of the demand for dollars in almost every European country. The way has been led by the franc, which, after ending up on the 5th at about 56.60, rose rapidly in the early part of the week to nearly 60, and although there has been some reaction, is still high and sensitive. During yesterday morning the rate, which opened at about 59, weakened a little, to about 58.70. The chief explanation given for this sudden movement is the necessity of meeting liabilities on grain purchased in the U.S.A., but it is said also that the German Government have been making heavy purchases of dollars out of the francs received by them for coal deliveries. If this is true, it has not hindered a further depreciation in the mark to about 294, as compared with 278 a week ago. As usual, the Belgian franc has moved in sympathy with the French, from 53·35 to 55·50, and, indeed, has slightly reduced the spread between the two currencies, which is now 3.20 francs, as compared with 3.25 a week ago. The quotation for futures in both currencies shows little change. The depreciation in Italian currency continues, although at a slightly slower rate, the lira, at 99 on Friday, being about 2 lire higher than the week before. It may be hoped that the settlement of the Adriatic question may have some slight effect in steadying the rate, but it is to be feared that the more important influence is the industrial situation, which shows little improvement. Dollars, which on 5th stood at 3.42, fell away rapidly in the early part of the week, mainly on Continental pressure, and although there was some recovery on Wednesday, the rate weakened again on the following day, and coming over from New York yesterday considerably lower, stood during the morning at about 3.35¾, with indications that the weakness will continue. Quotations for futures are at about 1½-2 cents above spot for one month, 3-4 cents for two months, and 5-6 cents for three months. Among other exchanges, the outstanding feature has been the continued rapid rise of the peseta, which, except for a slight recovery on Wednesday, has gone up from 25.35 on the 5th to 27.55 yesterday. The general adverse economic position and the increase in the note issue are the only factors so far suggested for this movement. Amsterdam, at 11.34, has moved 2 cents. in our favour on the week. Switzerland has moved slightly in our favour, as also have the three Scandinavian countries, the most pronounced rise being in the case of Copenhagen, which stands at 25.80, as compared with 25.40 on Friday last. Helsingfors, after a rather rapid rise, has recovered somewhat, and at 154 is only one mark over the quotation of November 5th. Rapid depreciation has continued both in Vienna and Warsaw. The state of the markets this week, which has been one very nearly approaching demoralisation, is a gloomy indication of what may be expected from the European exchanges during the coming winter, unless far more drastic efforts towards recovery are made in the countries concerned. Calcutta, Hong Kong, and Shanghai are unchanged on the week. Among South American exchanges, Rio has dropped appreciably to 11 15/16, and Valparaiso is also somewhat lower.

EVENTS OF THE WEEK.

NOVEMBER 6TH.—Agreement reached between British and French Governments as to methods of fixing amounts of reparation to be paid by Germany.

NOVEMBER 8TH.—Home Rule Bill debate. New York exchange at $3.35.

NOVEMBER 9TH.—Prime Minister at Guildhall banquet. Ministry of Health Bill read a second time.

NOVEMBER 10TH.—Bulgaria and Austria apply for admission to League of Nations. Adriatic frontier dispute settled.

NOVEMBER 11TH.—Armistice Day Commemoration. Home Rule Bill read a third time. Premier announces Imperial Conference to meet in June, 1921.

THE COOLING LAVA.

WE have done this week, as a nation, our very poor best to give due honour to those who died for us and a great cause. It was very right that we should thus celebrate the anniversary of the Armistice by honouring the dead. They did their duty, but we cannot with much confidence claim that we who are left have done ours in building the fabric of peace of which they laid the foundation. Nations are still bickering over the spoil, and are likely, if they bicker much longer, to find that most of the spoil has vanished, while internal bitterness and suspicion are everywhere rife. Nevertheless, there are indications that we are trying to struggle back towards sanity. A very hopeful speech was made last Tuesday by the Prime Minister at the Guildhall, though its authority was somewhat impaired by the jaunty jocularity with which he referred to the state of affairs in Ireland. He told us that "after the great eruption the lava is cooling," and spoke with real eloquence on the need for peace. "There are too many hatreds hurtling through the air. In judging policy, wisdom, the highest wisdom, demands that we should keep our prejudices and dislikes well under control. If we give rein to them Europe will remain a welter of raging hatreds. We want more goodwill among nations, among people, among classes." (*Times*, November 10th.) On the subject of German disarmament, he was able to show, on the authority of a War Office report, that the steps taken by Germany are a guarantee that her present rulers, at any rate, are perfectly sincere in their resolve to carry out the conditions of the Treaty of Peace "to their capacity"; and on the reparation question Mr Lloyd George could look forward with hope and confidence to the result of discussions shortly to be held. This hope would be more stimulating if it were less familiar. As to Russia, the Government perseveres in trying to secure peace lest Russia, fallen into anarchy, may become a "festering thing which will poison the atmosphere of the world." This is very sound sense, but the poison of anarchy has little terror for countries that are well governed, and where all classes feel that their interests are properly considered; moreover, though peace and trade with Russia are most desirable, the commercial community is surely right in insisting that due respect shall be paid to the obligations that the present Russian Government has taken over from its predecessors and incurred itself. On the industrial side of things at home, Mr Lloyd George deplored an atmosphere of suspicion among the workers. It is certainly deplorable, but has not history and experience given them some reason? The Prime Minister paid a well-merited tribute to their patriotism during the war, and those who criticise their recent actions must remember how great a danger they have to face of being forced back to the pre-war conditions which were admittedly a disgrace to the great and rich nation which permitted them. "You must," said Mr Lloyd George, "give a sense of complete confidence to the workmen, who constitute the vast majority of the people, that the country means to deal fairly and squarely with them." If the country takes this good advice, we shall soon be on the way to a great recovery. But there is a great mass of suspicion to be overcome. Prof. Shield Nicholson, in a book just published on the "Revival of Marxism,"* says that the "war fortune" is certainly one of the chief contributory causes of this revival. "From this point of view," he adds, "it is unfortunate that the special taxation of war fortunes is considered to be impracticable." The most inopportune revival of Protectionist activity is an unsavoury feature at this crisis, when the Brussels Conference has just re-asserted the statement, endorsed by the Supreme Council, that the freest interchange of goods is essential to the world's recovery. For British industry to be whining now for a ring-fence seems most unlikely to have a good effect on opinion abroad or at home. Perhaps, however, one of the symptoms of the cooling of the lava is the decision of the Government to postpone once more its Anti-Dumping Bill.

WHAT IS A BANK?

THIS very interesting question was raised last Wednesday by Dr Walter Leaf in his annual address as president of the Institute of Bankers. As he then told us, it lies at the root of the banking profession, but we have hitherto left it, in our English fashion, in a vague and fluid state, content that it should be determined if need arose by the general sense of the mercantile community. But it has lately assumed a very practical reality, for, as the president of the institute told his audience, a Bill has been drafted by the Government, and may any time be brought into Paliament, which for the first time will give a legal definition of the words bank and banker. So far the legal view of the matter, as far as the layman can discover, is that a bank is an institution which carries on banking business; and, as one of the subsequent speakers pointed out, this is rather like a reply of the Archdeacon who was asked by a young lady what an Archdeacon really was, and said that it was somebody who performed archidiaconal functions.

If, then, a definition is to be arrived at, what is it to be? The late Lord Cunliffe, acting on a suggestion of the

Government, a few years ago called together a small committee to discuss the whole matter in anticipation of legislation. That committee reported to the Clearing House Committee, and its report begins with a definition of a bank. Dr Leaf told his audience that, though a signatory to that report, he was never satisfied with the definition, and reseved his right to criticise it. It ran :—"A bank, as the term is understood in this country, may be broadly described as a firm or institution whose main business is to receive from the public moneys on current account, repayable on demand by cheque." Dr Leaf objects to this broad description on the ground that it introduces a term "main business," which itself requires a definition and explanation, and pointed out that it may be urged that the "main business" of a bank is not the receipt of money from the public, but the re-lending of that money. But surely it is the fact that the banks take money from the public and undertake to repay it on demand, which is the essential distinction between them and other businesses which lend or invest money left with them by the public. Dr Leaf went on to point out that if the "main business" means the largest in amount, a bank would mean an institution whose deposits on current account exceed those on deposit account. "This," he states, "would lead to strange results. In the first place, it would exclude, I believe, the whole of the Scotch and Irish banks, whose deposit accounts largely exceed their current accounts; it would include the clearing banks, but I am not by any means sure that it would cover the large exchange banks or colonial banks; and it is quite possible that we might have an institution which was a bank one day and not the next, according to the fluctuation of its balances. What is meant, then, I imagine, by 'main business' must be something like 'characteristic feature.'" The second definition is as follows :—"The expression 'bank' means any persons who hold themselves out as carrying on the business of receiving from the public on current account money which is to be repayable on demand by cheque, or who use the word 'bank' or any derivative of that word as part of the title or description under which they carry on business." Dr Leaf gave good reasons for preferring the following amended definition :—"The expression 'bank' means any persons who receive from the public on current account money which is to be repayable on demand by cheque, or who use the word 'bank' or any derivative of that word as part of the title under which they carry on business." This at least, as he pointed out, is clear and definite. The only disputable word in it is the word "public." The effect of this, as interpreted by the president of the Institute of Bankers, is to make it permissible for a firm doing commercial business to keep a current account with its own customers without coming under the Act; but would this really be so? He asks whether the customers of a large store are to be distinguished from the public. Surely they are not, and would not necessarily be if this definition were adopted; but there are still more difficulties. The object of the proposed legislation is apparently to include all banks doing business in the United Kingdom. Some of these are foreign banks, and it is suggested that they, if they refrain from doing business involving current accounts withdrawable by cheque, and if their names did not include the word bank, or any of its derivatives, would not come within the meaning of the Act. Thus, the Guaranty Trust, the Crédit Lyonnais, and the Disconto-Gesellschaft might, if they had no current accounts, not be included within the scope of the Act, whereas the Deutsche Bank, the National City Bank, or the Banca Commerciale would.

In view of all these difficulties Dr Leaf asks whether the thing is worth while. The call for definition, as he told his audience, appears to him to have as its ground the wish to bring under identical obligations all banks, foreign as well as British, wild cat as well as gilt edged. "One proposal," he supposes, "will be that all should submit themselves to an obligation to publish in a statutory form balance-sheets annually and average statements monthly, showing for their British business the amount of their assets and liabilities separately at home and abroad. This at least is included in the proposals of the bankers' sub-committee." Dr Leaf seems to be sceptical as to the possibility of the suggested common form of return, especially with regard to banks doing a large portion of their business abroad. Even if its terms are possible, he doubts whether the information that they will give will be what is required to increase the safety of the average bank depositor. "We must not forget," he says, "that by issuing any such regulations we may be doing harm if we induce a sense of security which may be false."

Nevertheless, there is surely a considerable balance of advantage in favour of a return to the system by which our banks publish monthly statements of their position, and for making that system obligatory—with a better form of statement, improved so as to avoid the old "window-dressing" scandal—on all banks in the country, with a variation, if necessary, in the case of those banks which do a large part of their business abroad. On the subject of definition, however, the difficulties so ably analysed by Dr Leaf are certainly formidable, and he called attention to yet another. "Look back," he said, "a hundred years. No one in 1820 would have dreamt of defining banking in terms of cheques. The definition in those days would probably have turned on the power to issue promissory notes payable on demand. The prohibition to partnerships of more than ten persons to issue such notes was regarded, and for a long time acted, as forbidding joint-stock banking altogether. Who can foretell what may be the banking developments of the next century?" Certainly it is possible that by 2020 the country's banking system may have altered at least as much as it has changed during the last century. By that time it is even possible that the nationalisation of the Big One may have altered the whole aspect of the problem, and that One Man One Overdraft may be a popular election cry. But without making further attempts at peering into the possibilities of the future, one must admit that Dr Leaf's objections to definition carry great weight, and that his alternative suggestion has much to be said for it. This is a Register of Bankers, which can be established without a hard and fast definition, and worked by a tribunal with power to admit applicants to the register on a wide view of all the circumstances of their business, the tribunal being representative not only of Government Departments, but of the industry and commerce of the country, as well as of existing banks. No institution not on the register should be allowed to use the name of bank or any derivative of it. On all registered banks such obligations as to publication of accounts and so forth would be imposed as might be thought desirable by Parliament. The tribunal would be able to inquire as to the need of variations in the form of publication rendered necessary by the different nature of the business of different banks. By this means, in Dr Leaf's view, we should secure elasticity rather than petrification. Elasticity has certainly been one of the chief causes of the success and prestige of our money market. Candour and publicity have been another, and it should surely be possible to secure or restore the latter without sacrificing the former.

OVERSEAS TRADE IN OCTOBER.

BRITISH exports in October were a little over £5 millions less than in September, and the decline is presumably attributable in the main to the coal strike. Exports of coal itself were only some £500,000 lower than in the previous month—a fact which suggests a scramble to export before the prohibition came into force. It must not, however, be assumed that this represents the whole effect of the strike upon our export trade, which will probably be more clearly reflected in the November than in the October returns. An improvement of nearly £3 millions in re-exports in October reduced the month's decline in total exports to well under £2½ millions, imports at the same time falling by £2.8 millions from the September figure. A summary of the value figures for October and the first ten months of 1919 and 1920 reads as follows :—

MONTH of OCTOBER.

	1919.	1920.	Increase or Decrease in October, 1920.	
	£	£	£	%
Imports	153,500,587	149,889,227	— 3,611,360	— 2·3
British exports	79,061,145	112,295,474	+ 33,234,329	+ 42·0
Re-exports	19,641,602	16,133,560	— 3,508,042	— 17·8
Total exports	98,702,747	128,429,034	+ 29,726,287	+ 30·1
Excess of imports over total exports	54,797,840	21,460,193	— 33,337,647	— 60·8

TEN MONTHS ENDED OCTOBER 31.

	1919.	1920.	Inc. or Dec. in 1920.	
	£	£	£	%
Imports	1,319,475,606	1,650,752,970	+331,277,364	+ 25·1
British exports	620,407,193	1,119,573,510	+499,166,317	+ 80·4
Re-exports	117,892,614	196,592,042	+ 78,699,428	+ 66·8
Total exports	738,299,807	1,316,165,552	+577,865,745	+ 78·1
Excess of imports over total exports	581,175,799	334,587,418	—246,588,381	— 42·2

The import balance, on the published figures, which at £21.5 millions is slightly below that recorded in September, is satisfactory in view of the estimate that invisible exports exceed £50 millions a month. The reduction of this balance on the published figures during 1920 represents a substantial achievement, and its progress month by month is worth studying :—

EXCESS of IMPORTS over TOTAL EXPORTS.

	1919.	1920.	Inc. or Dec. in 1920.
	£	£	£
January	82,643,136	52,154,002	— 30,489,134
February	54,655,263	61,946,353	+ 7,291,090
March	43,695,209	45,916,777	+ 2,221,568
April	40,236,953	40,495,198	+ 258,245
May	59,772,504	26,754,316	— 33,018,188
June	46,347,965	34,014,952	— 12,333,013
July	75,992,955	8,041,968	— 67,950,987
August	58,664,737	24,982,896	— 33,681,841
September	66,339,266	21,885,818	— 44,453,448
October	54,797,840	21,460,193	— 33,337,647

The last four months have provided a reduction in the balance nearly three times as great as that provided by the first six months of the year.

In October, as compared with a year ago, imports of foodstuffs, &c., were £3.1 millions higher, imports of manufactured goods £6 millions higher, and imports in the raw material class £12.8 millions lower, raw cotton (— £4.3 millions), and oilseeds, nuts, oils, &c. (— £5.3 millions), being the chief contributors to the latter decline. Of raw cotton we imported last month 716,787 centals, to a value of £9,019,835, against 1,369,518 centals, worth £13,507,170, a year ago, the reduced quantity reflecting slacker conditions in Lancashire. On the other hand, exports of cotton yarn and manufactures, though £5 millions lower than in September, are still £8 millions ahead of exports in October, 1919. On the export side, British manufactures show an increase of £33 millions for the month of October, and of £438.8 millions for the ten months as compared with 1919. As regards October, iron and steel and manufactures thereof are conspicuous with an advance of £6.6 millions, an increase which the detailed figures show to be well distributed over the various branches of the industry. Coal exports are £2.4 millions down on October, 1919, but the ten months' figures show a rise of £19 millions in value, though the quantity exported at 21.3 million tons is 8.3 million tons below the figure for January to October of last year. Under the present difficult conditions in the plantation industry the figures of rubber imports and re-exports attract attention :—

	Quantity. Centals.	Value. £
Rubber Imports.		
In October, 1919	229,080	2,334,950
In October, 1920	247,310	1,887,163
In January-October, 1919	1,913,166	19,964,341
In January-October, 1920	2,064,516	21,959,540
Rubber Re-exports.		
In October, 1919	220,468	2,296,104
In October, 1920	32,470	252,145
In January-October, 1919	984,795	10,086,995
In January-October, 1920	1,132,203	13,355,979

Rubber re-exports in October dwindled to a very low figure. Gold exports in October came to nearly £24 millions, of which £21.8 millions' worth went to the United States, who in the ten months have taken from us gold to the value of £43.7 millions out of a total export of £82.3 millions. Gold imports in the ten months were £31.4 millions, and in October alone £4.9 millions.

The October returns include tables showing origin and destination of imports and exports in the September quarter, which we propose to discuss in a separate article. Imports and exports for October and the ten months of 1919 and 1920 are shown below under 42 headings :—

IMPORTS (Value C.I.F.).

	Month Ended October 31.		Ten Months Ended October 31.

ARGENTINE RAILWAYS.

THE publication of the Buenos Ayres and Pacific report at the end of last week renders it possible to analyse the results achieved in the year ended June 30th last by the four great, broad-gauged British-owned railways of Argentina. For all four the year 1919-20 was, one is almost justified in saying, an *annus mirabilis*. The great and general improvement in net revenue, and the raising of dividends in most cases from a low level to above the pre-war percentage, must be very welcome to holders of the ordinary stocks after the rather tedious and anxious period that they have recently passed through. The dividend declarations, set out below, in comparison with those of recent years, foreshadowed the prosperous figures which the reports disclose. The dividend record of the four companies since 1913-14 has been as follows :—

Company.	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	%	%	%	%	%	%	%
B.A. and Pacific, ord...	nil	nil	1	nil	nil	2	5
Do 5% 2nd. non-cum. pref.	5	£2/16/6	5	1¾	5	5	5
B.A. Great Southern ..	5	4	4½	4	2	3	7
B.A. Western	5	5	5	3	2	4	7
Central Argentine, ord.	5	5	4	1	2	2	6
Do deferred	5	5	nil	nil	nil	nil	6

B.A. and Pacific ordinary stock receives 5 per cent. after a period of six years, in which only two distributions, of 1 per cent. and 2 per cent. respectively, were made. The Great Southern and the B.A. Western ordinary stocks get 7 per cent., against 5 per cent. in the last pre-war year, Central Argentine ordinary receives 6 per cent., against 2 per cent. last year and 5 per cent. in 1913-14, while Central Argentine deferred, after four blank years, enjoys a 6 per cent. distribution, which is 1 per cent. higher than the last pre-war dividend. A summary of the financial results that enabled these increased distributions to be made reads as follows :—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Total receipts.....	8,200,227	9.539,786	5,254,231	9.769.755

Ordinary dividends	500,000 (5 %)	2,036,300 (7 %)	1.006.164 (7 %)	1.739.925
Reserves	500,000	1,230,733	698.943	500.000
Renewal funds	270,577	..	250,000	300,000
Inc. (+) or dec. (—) in carry forward	+ 326,378	+ 48,699	+ 2,669	+ 95,417

The record of the Central Argentine in trebling the net receipts of the previous year from railway operation is perhaps the most remarkable feature of this table. But the other three companies also disclose very large increases. The item "other income less charges," calls for special notice, having in each case been very largely swollen by profits on exchange. Two of the companies place this profit on exchange straight to reserve, while the other two add it to revenue. For the sake of making the comparison between the four companies clearer, we have in each case included this profit in other income, and additions to reserves, &c., from this source under the last two items in the table. The B.A. and Pacific's profit on exchange was £872,646, the Great Southern's £1,230,733, the B.A. Western's £698,943. That of the Central Argentine is not specifically stated, the report containing the following passage :—"The board have availed of the fortuitous credit arising from differences in exchange in order to strengthen the renewals fund by transferring £300,000 thereto, the balance being carried to the general reserve fund to replace the £300,000 appropriated last year from the latter, and to meet eventualities, if and when provision may have to be made for them." In the absence of a specific mention of the figure, we have entered £600,000 under "other income," and include in the last two items of the table the allocations from this source to reserve and renewals funds. A year ago no additions to reserves were possible, and the Central Argentine drew upon reserves to the extent of £300,000. How the excellent working results have been built up is seen when we come to examine the traffic figures :—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (including Miscellaneous).		
	1919-20.	Inc. or Dec.		1919-20.	Inc. or Dec.		1919-20.	Inc. or Dec.	
	£	£	%	£	£	%	£	£	%
B.A. Pacific..	1.270,655	+ 238,597	23·1	6,547.724	+1,540,603	30·7	8,200,227	+1,930,266	30·7
B.A. Gt. Sthn.	3,075,137	+ 451,045	16·1	5,705,354	+1,504,664	35·8	9,539,786	+2,207,497	30·1
B.A. Western	887,633	+ 155,795	21·3	4,297,251	+1,363 533	46·5	5,254,231	+1,529,956	41·0
Central	2,128.640	+ 429,574	25·3	7,297,322	+2.306,294	46·2	9,769,755	+2,843,957	41·0

The large increases that are the universal experience are partly explained by the introduction in September, 1919, of an increased scale of charges. Further, the amount of grain traffic carried was quite abnormal. This was particularly the case with wheat, something approaching the product of two harvests being moved in the course of one financial year. The B.A. and Pacific report explains this fact thus :—"The 1920 harvest was good, but in addition a very large quantity of the old harvest had not been shipped at June 30, 1919, and with an unprecedented demand for export, and a large number of ships arriving at the ports, we had the greater part of two harvests to carry." But apart from this abnormal feature, the country enjoyed a general prosperity, with business active and plenty of money in circulation. How gross receipts have moved in recent years is seen below :—

PERCENTAGE CHANGES in TOTAL GROSS RECEIPTS.

	1913-14.	1914-15	1915-16	1916-17	1917-18	1918-19	1919-20.
	%	%	%	%	%	%	%
B.A. Pacific.....	—12·7	— 7·0	+ 2·6	— 5·0	+ 19·2	+ 19·0	+ 30·8
B.A. Great Southern ..	—16·8	— 9·6	+ 12·3	+ 3·3	+ 1·8	+ 25·6	+ 30·1
B.A. Western.....	—13·0	— 0·3	+ 7·6	— 7·7	+ 14·8	+ 30·3	+ 41·0
Central Argentine	— 6·6	— 5·0	— 0·3	— 8·5	+ 17·8	+ 12·0	+ 41·1

Expenditure continued to rise last year, coal and other fuel, and all raw materials, rising in price, while the continued advance in the cost of living brought about higher wages. But the following table shows the very satisfactory result that each of the four companies substantially reduced its ratio of expenses to receipts :—

RATIO of EXPENSES to RECEIPTS.

	1913-14.	1914-15.	1915-16	1916-17.	1917-18.	1918-19.	1919-20.
	%	%	%	%	%	%	%
B.A. and Pacific	62·63	61·70	61·16	65·68	65·80	71·51	69·69
B.A. Great Southern ..	58·56	60·44	57·04	64·06	76·16	77·96	69·19
B.A. Western.....	58·82	59·67	58·22	66·88	75·68	75·08	69·48
Central Argentine	58·54	58·43	64·53	68·71	73·93	84·60	67·66

The reduction in this ratio, due in part to a general rise in the average train load, is welcome after the rise of recent years. Expenditure for the past two years is analysed below under the headings of running expenses, maintenance, and general and miscellaneous :—

00's Omitted.

	Running Expenses.				Maintenance.				General and Miscellaneous.			
	1918-19.	% of Revenue.	1919-20.	% of Revenue.	1918-19.	% of Revenue.	1919-20.	% of Revenue.	1918-19.	% of Revenue.	1919-20.	% of Revenue.
	£	%	£	%	£	%	£	%	£	%	£	%
Pacific	3,035,1	48·5	3,527,0	43·0	1,041,3	16·6	1,595,8	19·5	407,4	6·7	589,3	7·1
Great Southern..	3,820,5	52·2	3,989,8	41·8	1,390,4	19·0	1,758,9	18·4	505,0	6·9	852,2	8·9
Western	1,709,8	45·7	2,050,4	39·0	794,0	21·3	1,245,5	23·7	292,3	7·7	354,9	6·7
Central.....	3,881,1	56·1	4,228,4	43·3	1,407,9	20·4	1,735,0	17·0	570,2	8·2	641,5	6·5

Running expenses absorbed a much lower percentage of revenue in every case. In the case of the Pacific and Western maintenance absorbed a larger proportion than last year. As regards the fuel cost difficulty, the references made by chairmen at the meetings to their efforts to obtain local oil fuel supplies are of the highest importance. The chairman of the Great Southern said :—"In view of the terrible prices for coals, it was vital to them to obtain oil fuel, and with that end in view they had entered into a contract with two other railways to obtain control over an oil property for some years. He had little doubt that they would get an ample supply, and that the venture would turn out to be good business." During the war period circumstances made it impossible in the Argentine, as elsewhere, to proceed with maintenance to the normal extent. Arrears of maintenance were, therefore, hanging over the companies. Last year each substantially increased its expenditure on this work, as will be seen by the following comparison :—

MAINTENANCE EXPENDITURE per MILE of ROAD.

	1916-17.	1917-18.	1918-19.	1919-20.	Ten Years' Average.
	£	£	£	£	£
Central	260	376	426	525	367
Western.....	249	312	422	662	345
Pacific	226	248	295	451	281
Great Southern	256	254	367	464	310

In comparing these expenditure figures the rise in prices must, of course, not be forgotten.

Shareholders' satisfaction with the year's results must not blind them to the fact that they are to some extent abnormal, or lead them to expect a repetition of "records" in the current year. Two harvests cannot be carried every year. Wheat export in 1919-20 was accelerated owing to exceptional demand, to the inevitable detriment of this year's showing. When compared with last year's high standard, traffic returns to date are disappointing. The returns for the first 17 weeks of the current financial year are tabulated below, in comparison with the corresponding period of 1919 :—

	Gross Receipts.		Net Receipts.	
	Amount.		Amount.	
	£	£	£	£
B.A. Pacific.....	2,215,000	— 288,000	..	..
B.A. Great Southern....	2,536,000	— 413,000	299,000	— 501,000
B.A. Western	1,273,000	— 458,000	134,000	— 450,000
Central Argentine.....	3,557,000	+ 680,000	..	..

On the other hand, the course of exchange is still very favourable to the companies, and large profits in this direction are likely to be repeated. Latest cables from the Argentine report an improvement in crop prospects, and although hopes should not be over-whetted by 1919-20's bumper profits, the outlook for 1920 is held, in the words of a cable quoted by the B.A. Western chairman, to be "very satisfactory."

Business Notes.

The Crops.—The October Statistical Bulletin of the International Institute of Agriculture announces the aggregate results of cereal crops in most of the countries of the nothern hemisphere. Data are now to hand from almost every quarter, with the exception of Russia, but as regards Europe comparisons with previous seasons cannot be made complete, owing to the numerous territorial alterations. The totals resulting from available and comparable data for the northern hemisphere sum up to 56.8 million metric tons of wheat, and 5.6 millions of rye. This quantity is slightly larger than the yield in 1919 (61.7 millions), and identical with the average of the preceding five years. The comparable data for barley dealing with a number of countries producing just under one-half of the world's yield, make a total of 12.7 million tons, 8 per cent. larger than the production of 1919, and 5 per cent. below the five years' average. The yield of oats in countries furnishing all the required data (affording about 60 per cent. of the world's yield) is estimated at 38.3 million tons, showing an increase of 21 per cent. over last year and 9 per cent. over the average. Reports on the probable yield of beet sugar are favourable from Austria, Belgium, France, Germany, Italy, Netherlands, Sweden, and Canada, also for both cane and beet sugar from the United States. The monthly report of the Ministry of Agriculture and Fisheries states that in most parts of the country very little rain fell during October, but mists and heavy dews were fairly common, and there was little wind to dry the outstanding corn. The weather was therefore favourable for the seasonal work of potato and root lifting, autumn cultivation and sowing. The corn harvest has been protracted by the damp weather, and in many parts of the country, apart from the east and south-east, was only completed towards the end of October, whilst in the North, in Wales and in a few other isolated districts, there is still an appreciable quantity of barley and oats in the fields. Much of the crop harvested during October was secured in damp condition, and heated stacks are not uncommon, while in the extreme North-East some sprouting occurred. On the whole, the crops may be said to have been harvested in moderate condition. Potatoes are now being lifted, and in many districts this work is nearly completed, though, owing to the late harvest, it is hardly so forward as usual on the whole. So far the tubers have been got up in good condition, but they are very frequently small, and there is a good deal of disease. Mangolds are being pulled in most districts, but generally little of this work had been done by the end of October. The roots are sound but rather small. Turnips and swedes improved during the month, and are still growing. The weather of October was very favourable for cultivation and sowing, but owing to the late harvest this work is backward in many parts of the country, especially in Wales and the North. The dry weather has suited live stock, and with good supplies of grass in the pastures both cattle and sheep have done well. In practically all parts of the country the quantity of winter keep on the farms is adequate, though roots may sometimes be scarce, and much of the hay is not of good quality. In some districts there are hardly enough cattle and sheep to graze the aftermaths. The supply of labour is sufficient for requirements in nearly all districts, and enough temporary labour for potato lifting, &c., has usually been obtainable.

HARRISONS & CROSFIELD, LIMITED.,

Scheme B Securities. — The National Debt office announced on Wednesday that until further notice the Treasury will release securities in New York, lent under Scheme B to the lender without requiring the depositor to put up the equivalent value in dollars. Hitherto holders of deposited securities who wished to sell in New York were required to pay dollars to the account of the Treasury there, receiving the equivalent amount in sterling.

Prospective Cotton Supplies.—At the beginning of this week the Census Bureau of the United States Government issued a report on the cotton crop for this season, the statement showing that up to November 1st 7,471,000 bales had been ginned, as compared with 6,305,000 bales last year, and 7,777,000 bales in 1918. The figures were better than expected, and during the last few days there has been an inclination on the part of certain authorities to increase estimates of the total output. Growers would very much like to hold supplies back for higher prices, but owing to the difficult financial conditions in the United States it is necessary for farmers from time to time to

sell. It may be pointed out that futures in Liverpool are now changing hands at rates which are below the cost of production and transport. The Alexandria General Produce Association has this week estimated the Egyptian cotton crop for the current season at about 6,000,000 cantars. This amount compares with 5,572,000 cantars last year, and 4,821,000 cantars in the previous season. The forecast, however, is disappointing, as two or three months ago there was an expectation of a growth of about 7,500,000 cantars. Since then the plants have been damaged by unfavourable temperatures, and the outlook for supplies has become worse.

Cotton Trade Short Time.—Although there has been some revival of demand in the Lancashire cotton industry during the last few weeks, most firms are still struggling against adverse conditions. At the end of last week the Master Spinners' Federation again considered the question of organised short time in mills engaged on American cotton, but after discussion it was decided that owing to the stoppages during the coal strike it was not desirable to take any action at the moment. The question will again be considered at the beginning of December. It will be remembered that the recent ballot of employers in this section with regard to curtailment of production on an organised scale failed to reveal the necessary majority in favour of the scheme. At the same time, however, the proposal to stop the mills using Egyptian cotton on Saturdays and Mondays for a month was carried, and the arrangement should expire next Monday. This week, however, the general committee of the Masters' Federation has reviewed the situation, and as no definite relief has been obtained it has been decided to continue the week-end stoppages for a further period of one month, carrying the short-time policy to December 13th.

American Cancellations.—Our Manchester correspondent writes :—Since a week ago the Manchester Chamber of Commerce has given further attention to the question which has arisen with regard to the attempts of American houses to cancel contracts with English firms, especially in textile goods. The American Consul in Manchester has written to Mr E. F. Stockton, the President of the Chamber of Commerce, pointing out that the American Consular Service has facilities for dealing with trade misunderstandings between American and foreign firms, and he has offered his services in connection with the present disputes. This letter has been considered by the directors of the Chamber, and since then Mr Stockton has discussed the position of affairs with the American Consul. The latter has promised the co-operation of himself and the American Bureau of Foreign and Domestic Commerce in the efforts of the Manchester Chamber of Commerce to expose the alleged unjustifiable conduct of certain firms in the United States. It may be said that several Manchester firms are very badly hit by the developments which have taken place, and as the goods which are not being taken up are fine yarn and cloth, the possible losses are very heavy, as during the past six months the depreciation in values has been over 50 per cent.

International Cotton Federation.—On Wednesday last there was a special meeting in London of the Committee of the International Federation of Master Cotton Spinners' and Manufacturers' Associations. Representatives were present from England, Belgium, Italy, France, Holland, Sweden, Japan and Czecho-Slovakia. Reports were given by the representatives of the several countries on the state of trade, and it was realised by the Committee that the depression was universal, resulting in short time working in many mills.

The New China Consortium.—At a China Association dinner, held last Thursday, Sir Chas. Addis summarised the results arrived at by the recent conference in New York of representatives of the four nations concerned—America, France, Japan, and England. The principle on which the new Consortium was founded he defined as the substitution of international co-operation in China for international competition. In effect, the Powers had agreed to abandon the old *régime* of spheres of influence or of interest, and the four groups had surrendered their existing agreements and options, and had merged in the Consortium all their separate and individual interests which they now possess or control and their separate interests in any concessions of which they may become possessed in future. Sir Charles paid tribute to the loyal co-operation which he received from his Japanese colleague, expressing confidence that we can continue to rely upon the loyal observance by Japan, both in the spirit and the letter of the agreement to which they have put their hands. As to the Shantung Railway question, he pointed out that it is an award of the Treaty of Versailles. It does not lie within the competence of this or of any other Consortium to reverse that decision; that can only be done by those who made the Treaty or by the League of Nations. What the Consortium can do, and has done, is to ensure that any expansion of this railway, the rights of construction of any extension or branch of it, shall enure to the Consortium as a whole, and not to any individual nation. Such a policy is obviously incompatible within the maintenance of the former system by which railways in China were constructed in sections, one section being allotted to a British engineer, one to a French engineer, one to an American engineer, and so on. Accordingly, the unification of the whole railway system of China is now part of the declared policy of the Consortium. It is part of their programme to abandon these sectional distinctions, and to entrust the administration of the system as a whole to a Railway Board in connection with the Government Department of Communications in Peking. It is proposed that the chairman of the Board should be the Minister himself, assisted by four Chinese colleagues, and by four foreign engineers, upon whose expert advice and assistance he could rely. Such, in brief outline, are the aims of the Consortium as described by Sir Charles. It is their earnest desire to assist China in obtaining through the establishment of a strong and suitable central Government the degree of security required for the development of her immense natural resources. But any reform worthy of the name must come from within, and China can only be saved by her own exertions.

War Loan Prices and Yields.—The table below shows how prices of the various War Loans stand to-day, as compared with those at which the stocks were offered; but it is necessary in this connection to emphasise the options given to holders of the 3½ per cent. and the 4½ per cent. stocks to exchange into the 5 per cent. or 4 per cent. (tax-compounded) loans :—

Issue.	Interest. %	Issue Price.	Redeemable.	Present Price.
War Loan	3½	95	1925–8	83
Do	4½	100	1925–45	76½
Do	5	95	1929–47	83
Do (tax-free)	4	100	1929–42	94½
Funding Loan	4	80	1960–90	68
Victory Bonds	4	85	Drawings	74

The 4½ per cent. loan has fallen most, as compared with the others, from its issue price, but its present amount is much smaller than any of the rest, and the proprietors had the opportunity, in January, 1917, of getting out at hardly any loss at all. The yields range somewhat widely, and and work out as follows :—

Loan.	Price.	Yield. £ s d	Yield Plus Redemption. £ s d
War Loan, 3½ %	83	4 4 6	6 12 0
Do 4½ %	76½	5 17 8	6 6 0
Do 5 %	83	6 0 6	6 7 0
Do 4 % (tax-free)	94½	4 4 6	4 7 0
Funding Loan, 4 %	68	5 17 0	5 18 6
Victory Bonds, 4 %	74	5 8 6	5 18 6

(Average life 28 years)

Redemption return is calculated, in accordance with invariable Stock Exchange custom, upon the farthest dates named. The attraction in the profit to be obtained by holding any of the loans to maturity is, of course, the fact that income-tax is not payable upon the difference in yields shown in the last two columns of this table.

THE IRVING method of tracing an import shipment from the hour the draft or other advice is received, of notifying the consignee of its arrival and presenting the draft by personal messenger in Manhattan, and elsewhere by a banking correspondent on the spot, insures the over-seas shipper or banking correspondent a prompt credit or an immediate report on how the business stands—with effective aid in meeting any emergency which may arise. Operating speed is a vital element in Irving specialized service.

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

Some Effects of the Coal Strike. — The result of the strike of miners upon the weekly production of coal is clearly shown in the following table of output since the beginning of August :—

	Tons.		Tons.
August 7	3,086,700	September 25	4,834,000
August 14	4,595,200	October 2	4,702,800
August 21	4,697,200	October 9	4,713,100
August 28	4,590,000	October 16	4,611,600
September 4	4,750,900	October 23	12,500
September 11	4,606,800	October 30	4,100
September 18	4,692,900		

In reply to a question in the House of Commons on Monday, Mr Bridgeman, Secretary for Mines, stated that the loss in coal output through the coal strike was estimated at from 13,000,000 to 14,000,000 tons, and the loss in wages to the miners at £14,000,000 to £15,000,000. He was informed by the Minister of Labour that statistics were not available to show the total amount of unemployment of the total loss in wages caused by the coal strike, but among workpeople insured against unemployment under the Unemployment Insurance Act, or the Out-of-Work Donation Scheme for ex-service men, the total number of unemployed rose by approximately 270,000 between October 8th and November 4th. It would appear probable, therefore, that the total increase in the number of unemployed (apart from those employed at the coal mines) could not have been much less than 350,000, and may have been greater. In addition, a large number of workpeople were reported to have been on short time. Mr Bridgeman also gave the following comparative figures for the first six months of 1913 and 1920 :—

—	Amount, 1913 (Six-Monthly Basis).	Amount, 1920 (First Six Months).	Percentage Increase (+) or Decrease (—) as Compared with 1913.
Quantity of disposable coal produced	Tons. 132,000,000	Tons. 108,000,000	— % 18
Pithead value (including proceeds of miners' coal)	£ 73,000,000	£ 192,700,000	+ 164
Wages	45,500,000	129,800,000	+ 185
Royalties	3,000,000	3,400,000	+ 13
Salaries and other expenses	13,000,000	37,200,000	+ 186
Adjustments in respect of variation of capital since the pre-war period	Nil.	2,000,000	..
Profits	11,000,000	20,300,000	+ 85

The advance in wages and salaries, it will be seen, overtops the increase in the value of the coal at the pithead.

Indian Wheat.—The final general memorandum on the Indian wheat crop for the season 1919-20, covering 98.6 per cent. of the total wheat area of India, states that the total area is 29,976,000 acres, as against 23,798,000 acres last year, or an increase of 26 per cent. The total yield of the crop, which has already been harvested, is estimated at 10,092,000 tons (47,096,000 quarters of 480 lbs each), as against 7,508,000 tons last year, or an increase of 34 per cent. Details of the yields from the various provinces are shown in the following table :—

YIELD (in Thousand Tons).

Provinces and States.	1918-19.	1919-20.	Increase	Yield per Acre. 1918-19.	Yield per Acre. 1919-20.
				lbs	lbs
Punjab	2,893	3,884	+ 991	759	874
United Provinces	2,304	2,996	+ 692	948	954
Central Provinces and Berar	701	863	+ 162	545	582
Bombay	196	466	+ 270	432	565
Sind	115	135	+ 20	738	515
Bihar and Orissa	360	498	+ 138	836	974
North-West Frontier Province	235	280	+ 55	578	611
Bengal	22	28	+ 6	429	541
Delhi	12	12	..	1,169	867
Ajmer-Merwara	2	5	+ 3	747	467
Central India	491	666	+ 175	478	489
Hyderabad	41	53	+ 12	147	154
Rajputana	135	185	+ 50	501	425
Baroda	10	20	+ 10	380	527
Mysore	1	1	..	330	290
Total	7,508	10,092	+ 2,584	707	754

Exports in 1917-18 amounted to 1,454,400 tons, but since then have steadily declined, the total for 1918-19 being 476,100 tons and for 1919-20 8,600 tons. For the first three months of this year they were only 2,700 tons.

The Mexican Outlook.—The announcement that the United States has decided to recognise the new Government in Mexico has been followed by mail advices from New York of a very hopeful character, which were summarised in the financial daily papers of Wednesday last. Americans are reported to be buying Mexican National railroad issues, and even Government bonds. American financiers are expected to agree at last to provide the long-expected loan; the probable amount is stated to be $100,000,000, and it is to be spent on railroad and harbour development, and on satisfying various claims against the Government. It is even stated that the arrears of interest on the External Debt will be paid off, and the existing loans converted into a new debt. The precise authority for these statements is not given. No doubt the new Government of Mexico is eager to placate its great neighbour, and to do its very best to inspire confidence. But a loan raised in the United States under present conditions might very possibly cost Mexico 10 per cent. annually in interest and incidental charges, and might revive popular suspicion of

American designs on Mexico—especially as powerful business interests and some prominent Republican politicians were obviously working for intervention during Carranza's rule. No doubt Mexico is prosperous; the export of oil, and the export duties on it, are breaking the record, and the population is probably tired of revolution and ready to settle to regular work. But it will take time and money to develop the vast latent resources of the country, to quiet the ex-revolutionists by giving them small holdings, and to organise means of suppressing local disturbance such as were effective under the strong hand of Diaz. And the predictions as to a resumption of payment on the foreign debt must be received with caution. The External Debt amounts in all to £34,141,183; the arrears of interest on it to £9,207,006. It would seem to be more reasonable to fund the arrears than to strain the resources of the country by an early repayment in full. Besides these liabilities, there are other issues backed by Government guarantees—the City of Mexico 5 per cent. bonds, the Irrigation Loan (Caja de Prestamos para Obras de Irrigacion), the Mexican Packing Company's mortgage bonds (two issues), and two internal loans. The total capital of these six guaranteed issues amounts to £20,814,400, the arrears of interest to £5,629,010. Further, the Four per Cent. Gold Bonds of the National Railways of Mexico, amounting to over £10,000,000, are guaranteed by the Government. Possibly these obligations may eventually be the subject of a conversion scheme.

Transvaal Output for October.—The October statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 662,472 ounces as compared with 682,173 ounces in September and 723,722 ounces for October, 1919. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Diamond	5,232	5,057	4,793	4,596	4,521	4,244	4,323	4,214
Total	206,584	207,454	202,412	197,459	191,713	187,042	181,171	177,498

New Zealand Meat.—According to an official cable dated November 11th, Mr Massey has stated that an exhaustive inquiry is imperative, in view of mistaken allegations of local labour bodies regarding the condition of frozen meat. Further, the Minister of Agriculture says that bad meat has always been refused shipment, and that the New Zealand system of Government inspection is recognised as very efficient, and much more severe than in most other countries.

Liquor Control Profits.—A White Paper [Cmd. 1,018, price 1d] deals with the financial working in the year ended March 31, 1920, of the premises and businesses acquired by the Central Control Board (Liquor Traffic) in the four "control" districts of Enfield Lock, Cromarty Firth, Gretna-Without-the-Township, and Carlisle and District. Trading profits for the year were £203,299, "after meeting all ordinary recurrent charges and depreciation, writing off the cost of improvements not estimated to add to the realisable value of the properties, and making provision for deferred repairs and improvements." From these trading profits a sum of £778 is deducted for depreciation of leasehold properties, and £5,701 is charged for preliminary expenses incidental to acquisition. There remains £196,820 as "net return on capital," which is closely akin to the figure for the previous years of operation. This sum is appropriated as to £35,710 in defraying the charge for interest on Exchequer and other balances, leaving £161,110 accruing to the Exchequer towards replacement of capital cost. With the accumulated surplus as at March 31, 1919 (£274,225 12s), the amount accruing to the Exchequer since the commencement of the Board's direct control undertakings, after due provision has been made for the efficient maintenance of the undertakings, and for the payment of interest at Government rates on the sums advanced from the Exchequer, now stands at a total of £434,335. As regards this figure it should be noted that, inasmuch as the whole amount accrues to the Exchequer, there has been no need to make an estimated allowance for Excess Profits Duty, while, on the other hand, the amounts set aside for deferred repairs and improvements (over and above a full allowance for depreciation) have now reached a total of £65,400.

Dalgety's Year.—The annual report and balance-sheet for the year ended June 30, 1920, reveal that the company has had a record year. Trading profits are £957,298, as compared with £857,773 for 1919, and £875,369 for 1918. Australasian taxes amount to £97,787, while £88,453 goes in British taxation. The following table gives profits and appropriations since 1906:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debenture Interest.	Pref. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
	£	£	£	£	£	%	£	£
1906	371,591	148,171	114,439	..	70,000	7	40,000	55,381
1907	427,490	164,441	115,306	..	70,000	7	70,000	63,124
1908	430,746	170,328	113,230	..	70,000	7	70,000	70,311
1909	477,125	180,186	117,611	23,868	70,000	7	85,000	70,772
1910	542,534	198,362	122,364	25,000	80,000	8	110,000	77,579
1911	551,371	215,000	117,232	25,000	80,000	8	110,000	81,717
1912	546,877	216,446	112,992	25,000	80,000	8	110,000	84,155
1913	562,229	230,525	108,326	25,000	80,000	8	110,000	92,532
1914	570,510	245,434	105,593	25,000	80,000	8	10,000	197,015
1915	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506

The reserve fund is credited with £50,000, bringing that total up to £900,000. Gross assets are shown in the balance-sheet as £8,153,061, being an increase of £421,353 on the previous year's figures. Advances on land have increased by £378,816, and "Sundry Debtors" by £227,568, while investments are down by £115,718. An analysis of the balance-sheet will be found in the usual column. The report states that "Values for practically all Australian and New Zealand produce have been remunerative during the period under review, but since then the situation has, in respect to some articles, particularly wool, altered for the worse, and prices have on the whole a downward tendency, and sales are often difficult to effect."

THE Royal Society of Arts, 18 John street, Adelphi, W.C., announce arrangements for this month and next. On November 17th, at 8 o'clock, Mr A. A. C. Swinton will deliver the opening address on "Wireless Telegraphy and Telephony." On December 7th, at 4.30, Mr A. H. Ashbolt, Agent-General of Tasmania, will lecture on "The Trade of Australia During and After the War," and on December 15th, at 8 o'clock, Lord Lovat on "Forestry." Other lectures on November 24th and 29th, December 1st, 6th, 8th, and 13th.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on November 16th, at 4 p.m., at which a paper on "Kenya Colony: Its Present Prospects and Future Developments," will be read by W. S. Bromhead, Esq.

UNITED STATES.—FOREIGN TRADE: HEAVY DECREASE IN SEPTEMBER IMPORTS—COTTON GINNINGS—STEEL EARNINGS—FOREIGN FINANCING.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 29.

FOREIGN trade returns for September, published this week, contained a number of surprises; both imports and exports ran counter to general expectations. Exports of $606,000,000 were $27,000,000, or nearly 5 per cent., larger than those for August, which were the smallest for 13 months, while imports of $363,000,000 showed a decline of $150,000,000, or 29 per cent., from August. The result was an excess of exports of $243,000,000 compared with a balance of only $65,000,000 in August, the latter being the smallest excess of exports in any month since October, 1914. Compared with September of last year, exports gained nearly 2 per cent., but imports were 16 per cent. less, the total for last month being the smallest of any month since August, 1919. Owing partly to declining prices and dull trade here, some falling off in imports was looked for, but nothing like the heavy decrease disclosed by the Government's figures was anticipated. The report on its face apparently indicates that foreign countries are still absorbing vast quantities of American raw materials and finished products, but, generally speaking, have not been able to increase shipments of their own goods and commodities to American markets. To what extent the increased exports may have been responsible for the depression in foreign exchange cannot be stated until the statistics of September exports by destinations are available. Not much light is thrown on the foreign trade situation by the statement of agricultural exports for that month, which merely shows that shipments of breadstuffs were $1,000,000 less than in August, while meat products increased $8,000,000, cotton exports were $13,000,000 larger, and those of oils $8,000,000 smaller. It will be interesting to see just what portion of the $150,000,000 decline in imports last month was due to a shrinkage in imports from Europe. For the first eight months of this year imports have increased $537,000,000, or 145 per cent., over the corresponding period of 1919. In connection with our present foreign trade movement, it is interesting to note that exports of wheat, including flour, from the United States and Canada this week, according to *Bradstreet's*, totalled 9,564,365 bushels, against 7,240,145 bushels last week, and for the past 17 weeks aggregate 170,161,227 bushels, an increase of more than 60,000,000 bushels over the corresponding period of last year; corn exports this week were only 265,933 bushels, against 514,500 bushels last week, but the total for 17 weeks ending October 28th amounts to 2,230,095 bushels, against 781,748 bushels last year.

The Government's cotton ginning report this week, showing 5,712,057 running bales ginned before October 18th, quite plainly indicates that efforts throughout the cotton belt to keep gins closed until prices of the staple advanced had up to that time very little effect. The amount ginned this season is approximately 782,000 bales larger than the quantity ginned to October 18th last year, when the crop was nearly 800,000 bales smaller than the present indicated yield. Based on the Government's forecast of a crop of 12,123,000 bales, the ginnings to October 18th appear to be about 47 per cent. of the total, which is almost 4 per cent. higher than last year's percentage as of that date, but lower than an average of 48.9 per cent. for the last 18 years.

Net earnings of the United States Steel Corporation, amounting to $48,051,540 for the quarter ended September 30th, were nearly $5,000,000 larger than in the second quarter of this year, and almost $8,000,000 above those of the first quarter; in fact, the earnings, after providing for Federal taxes and interest on bonds of subsidiary companies, were larger than in any three months' period since the second quarter of 1918. The balance available for dividends in the past quarter was $30,528,639, equivalent, after preferred dividends, to $4.76 a share on the common stock, as compared with $3.96 a share in the June quarter and $3.43 per share in the September quarter of last year. The corporation's surplus for dividends for the nine months ended September 30th amounted to $82,995,957, equal, after preferred dividends, to $12.60 a share on the common stock, as against $7.92 a share in the corresponding period last year. With earnings for the last quarter of 1920 estimated, it is expected that the corporation will close the year with a surplus available for dividends of about $110,000,000, which would be equivalent, after preferred dividends, to $16.70 per share on the outstanding common stock. The increase in earnings during the third quarter was due largely to improvement in the transportation situation, which permitted freer movement of steel products accumulated during the freight congestion earlier in the season. The unfilled orders totalling 10,374,804 tons on September 30th are considered sufficient to keep the corporation's mills running close to capacity for several months. Some independent steel companies reported a much larger increase in earnings for the past quarter than did the Steel Corporation, but the latter adhered to its price schedule established some time ago, whereas the independents increased their prices. It is noteworthy, however, that various independent iron and steel producers are now lowering their quotations, and in some instances curtailing their output owing to the slackening of demand.

The bond market continues remarkably strong and active, with a brisk demand still in evidence for well-seasoned issues, especially railroad and industrial securities. Investment absorption of new offerings, with attractive yields, is well maintained, as is shown by the immediate sale this week of $30,000,000 Westinghouse Electric and Manufacturing Company 7 per cent. gold bonds, due May 1, 1931, which were offered at 94¾ per cent., and accrued interest to date of delivery, at which price the bonds will yield about 7¾ per cent. if held to maturity. No new foreign financing in this market was announced this week, but a large amount, both foreign and domestic is pending. European financing now being considered, it is understood, includes bond issues to be floated here for the cities of Berne, Stockholm, Amsterdam, and Rotterdam, while Sweden may apply for another long-term loan. Negotiations are still under way for loans to Cuba and Brazil; financing of the latter's requirements may amount practically, to a valorisation of the coffee crop. In all probability the Cuban Government will secure from a group of American banks and bankers a loan of $75,000,000 to $100,000,000, to be used solely for financing the Cuban sugar crop. Whether the loan will be purely a banking credit or will consist of an offering of short-term notes to the investment public has not yet been determined. It is expected that the Government of Haiti also will obtain a loan here of about $15,000,000 to meet its external debt, most of which is held by French interests.

GERMANY.—POLITICS—EXCHANGE AND BOURSE—RAILWAYS—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BERLIN, November 6.

BERLIN is again to-day without electricity and trams, and in part without gas, as a result of a strike engineered on their own responsibility by certain groups of municipal workmen. There are threats of a sympathy strike by elevated railway, water, and other employees. The political situation is not improving. Stories of new attempts at a *coup d'état* by Communists are circulated; and letters published in the newspapers between the Berlin extremists and Moscow indicate that the approaching second anniversary of the Revolution was intended to be the signal for an outbreak. In these letters, the Communists boast of still possessing a secret organised army, with artillery, half a million rifles, tanks, aeroplanes, and the other technical apparatus of war. The figures of armament seem to be exaggerated, and the threatened revolt is not taken very seriously; but, as to general conditions, there is increasing nervousness, which was well brought out in the week's Reichstag debates. The Minister for Foreign Affairs, Dr Simons, has again protested against the annexation of Eupen and Malmedy by Belgium; and he now declares formally that Germany does not recognise the annexation, and considers it a breach of the Versailles Treaty. The former Colonial Minister, Dr Dernburg, protested against the whole Treaty, described it as an immoral impossibility, and demanded revision. The Finance Minister had to repel sharp attacks by his predecessor, Dr Helfferich; but again, beyond declaring that the currency must be stabilised, he gave no indication of measures for financial amelioration. The news that part of the Emergency Levy is to be collected at once is confirmed; but as the whole levy, which was originally intended to extinguish part of the Debt, would not cover the deficit in the new Budget, this measure will not avail much.

The foreign exchanges again rose considerably this week; sterling sold to-day at 279.80 and the dollar at 82.08, the highest points since the new rise began in June. The Bourse during the week was, as always, affected by this movement; but it was also affected in bull direction by yet further big industrial combinations. The Leuna and Oppa works, belonging to the Badische Aniline Company, which can produce 300,000 tons of nitre a year, are to be turned into a separate company, with capital of 500,000,000 marks; and will in future form an independent member of the so-called "Aniline Concern," consisting of the Badische, Hochst, Bayer, and other companies, which is the largest capitalised concern in Germany. The agreement between the seven companies in the "Aniline Concern" is to be prolonged until 1999. Another chemicals company, the "Gesellschaft fuer Chemische Produkte" (Sheidemandel Group), has concluded an agreement for common operations with an international syndicate, under leadership of the American Glue Company. Technical methods and experiences will be exchanged; and shares in the Scheidemandel Company will be bought by the syndicate. A Boot Trust, embracing the largest concerns, is being negotiated; and a Starch Trust, in which is already represented 90 per cent. of the total German production, has been formed. Herr Stinnes' Rhine-Elbe Union, which only last week completed its agreement with the General Electricity Company, has acquired control of an important fine-steel goods manufacturing company; and it is reported that the General Electricity Company is about to make an agreement, similar to that made with Stinnes, with the raw-material-producing companies of Upper Silesia.

The stock speculation continues; and the Bourse Committee has decided to continue closing on one day a week until the end of the year. This week the upward movement was confined to individual stocks; and the professional speculators showed reserve. Financial newspapers reported that the banks are overwhelmed with orders to buy dollars and gulden; but though this is a bull factor, in view of the invariable coincidence of rising exchanges with rising stocks, bull speculators were frightened early in the week by stories of new impending expenditure of milliards on imported food, which expenditure would merely accelerate the mark's drop. This inconsistent attitude has characterised all German Stock Exchanges for months past. The result of the American President election was taken favourably, on the assumption that Mr Harding would break altogether with President Wilson's policy. The Berlin exchange to-day closed in a reserved mood, without marked tendency either way.

The Reichsbank report for the week ending October 30th shows new heavy demands for credit, and in connection with monthly settlements a large increase of paper circulation. Of new Reichsbank notes there were put into circulation 1,530.3 millions, and of Darlehnkassenscheine 83.1 millions, a total of 613.4 millions, leaving the total circulations at 63,596.4 millions and 13,024.1 millions respectively. Savings Banks deposits show a new tendency to increase. In August the net increase was 400 million marks, as against 1,200 million marks in July and 1,600 million marks in June. In September the increase was 700 million marks. The increase in the first nine months of the year was 5,640 million marks, as against 5,100 million marks in the same months of 1919. The Government has annulled the decree of November, 1917, which, for loan reasons, forbade creation of new public companies without State permission. Newspapers publish stories of the continued smuggling out of money on a large scale; and after to-day witnessing the departure of a passenger steamer from a Baltic port, I can testify that the newspaper stories of official laxity in this matter are rather behind the truth.

The Government has set up a Committee of Experts to examine the financial condition of the railways. A new increase in freight rates, possibly in passenger fares, is under consideration. The Minister for Railways this week made a statement as to the main causes of the deficit. Technically, the railways are in a bad condition. During the war the copper fire-boxes were taken from the locomotives and replaced with iron, with very bad results. The efficiency of the construction and repair shops has heavily declined since 1913. The number of railway employees of all kinds has risen by 50 per cent. During demobilisation many unemployed persons, who knew nothing of railway work, were taken on merely in order to provide them with salaries. The wage bill of the officials has risen from 2,352,000,000 marks to 14,027,000,000 marks; and that of the workmen (not counted as officials) from 1,331,000,000 marks to 11,212,000,000 marks. On the whole, wages have risen sevenfold; much less than coal, which has risen 19-fold, rails 28-fold, steel plates 40-fold, and cars and carriages 17-fold. The Coal Bill has risen from 219,000,000 marks to 4,353,000,000 marks. But fares have risen only 4½-fold and freight rates 6-fold. In 1913 the freight rate on coal transported from Essen to Berlin cost 90 per cent. of the coal's value; to-day it costs only 25 per cent. These figures make plain the cause of the deficit. It is, in fact, impossible to raise charges for State services as rapidly as the cost of running them rises; precisely similar is the cause of the heavy deficit on Posts. Apart from the proposed increased of freight rates, the only remedy suggested by the Minister is the conversion of the State construction and repair shops into independent organisations under commercial leadership. This proposed denationalisation accords with the recommendations of both Socialisation Commissions.

Employment conditions continue to improve. On October 1st the Trades Unions reported 237,789 unemployed persons, or 4.4 per cent. of their membership of 5,335,618, as against 5.9 per cent. on September 1st. The ratio of employment seekers in the official labour exchanges to offers has fallen. The number of publicly supported unemployed on October 1st was 394,371, against 414,075 on September 1st. The greatest improvement is in leather, textiles, wood, and clothing. The improvement in home and foreign trade continues; but it has no better foundation than the increasing depreciation of the currency both at home and abroad.

ITALY.—RISING PRICES AND EXCHANGES: FALLING SHARE QUOTATIONS.

(FROM OUR CORRESPONDENT.)

TURIN, November 5.

PROFESSOR BACHI publishes in the *Economista* his interesting index numbers for commodity prices and share quotations at the end of September. As the basis 100 of

your and Bachi's number indexes is the same, viz., 1901-1905, I place in the last column the *Economist* percentage figure for comparison :—

	Cereals and Meat.	Other Food Products.	Textiles.	Minerals and Metals.	Miscellaneous.	General Index.	
						Italian.	British.
March, 1920	458.5	610.4	1156.6	1205.2	576.0	780.0	379.6
May	530.2	728.2	1012.8	1317.3	619.4	830.3	372.7
June	535.0	746.7	895.3	1109.9	628.4	774.7	356.7
July	521.9	742.7	915.4	1093.0	639.5	772.4	358.0
August	534.8	745.6	957.3	1157.9	637.0	795.9	352.0
September	551.7	759.7	1009.0	1257.8	637.9	832.2	347.5

Italian prices again rose in September, and surpassed the May record. All the groups contribute to the rise, but minerals and metals are at the top of the ladder; textiles are good seconds. An explanation may partly be found in the following figures of circulation and foreign exchanges :—

	Total Circulation (Commercial, State, and State Notes).	Percentage Exchanges on	
		Switzerland.	London.
	Millions Lire.		
June, 1914	2.698	106.6	100.1
December, 1919	18.552	242.4	198.7
March, 1920	18.465	321.2	279.7
April, 1920	18.964	410.5	358.4
May, 1920	19.397	352.8	304.9
June, 1920	20.087	302.2	261.8
July, 1920		319.4	277.8
August, 1920	20.225	356.8	306.1
September, 1920	20.225	385.8	332.5

The rise in prices appears to follow, at a certain distance of time, the fluctuations of the exchanges. As in October these continued to rise, we may expect a new corresponding rise in the October index of commodity prices. The note circulation keeps on increasing. The figure for December, 1919, divided in 12,901 millions lire for State account and 5,651 for commerce accounts, while the corresponding figures for September, 1920, are 12,794 and note circulation keeps on increasing. The figure for the increase of the note issues was not the State's but commerce's requirements. The statement is, however, somewhat misleading, as under the cover of commercial circulation are put loans on 5 per Cent. Consols and discounts of Treasury bills. Loans and discounts are made to private parties, but substantially are of the same nature as your banking credits for subscriptions to State loans. Part of the subscriptions to the last State loan and to Exchequer bills are thus financed by creation of paper.

In Germany, as the exchanges go up, so the prices of shares and stocks also rise, shares of industrial concerns being capitalised not on the basis of dividends, but on the valuation of assets and goodwill in a depreciating currency. The same phenomenon should hold good in Italy, whereas, in fact, the opposite has happened. As the foreign exchanges went up and the lira was depreciating, shares, instead of rising, began to tumble. Between March and September the lira, as expressed by the London exchange, lost from 35 to 30 per cent. of its nominal value. The course of quotations of 113 leading shares was as follows :—

	March.	June.	September.
Banks	104.26	91.09	88.94
Railways	103.85	94.37	74.04
Land Transports	102.95	95.41	81.40
Navigation	110.88	98.49	80.45
Cotton	137.67	129.47	112.52
Jute	161.00	158.40	132.00
Wool	118.86	116.00	99.14
Hemp	134.00	137.17	112.76
Silk	128.37	127.00	114.47
Mines	113.56	100.51	74.43
Iron and steel	105.51	86.50	59.48
Engineering	101.98	86.71	68.09
Motor cars	111.07	91.31	65.03
Electricity	106.37	93.81	83.48
Chemical	106.39	103.79	83,63
Sugar	119.55	111.92	88.45
Various food	104.85	98.90	82.59
Waterworks	98.91	96.81	87.52
Building and house co.'s	105.78	103.30	93.98
Miscellaneous	126.88	117.92	119.87
General index	106.97	94.07	80.33

As the basis 100 in this table was the quotation of December, 1919, it is clear that these leading shares had lost in nine months nearly 20 per cent. of their value at the end of 1919. Textiles alone are quoted higher. The causes of the bad conditions of the Italian bourses are many :—(1) The fear of the coming compulsory inscription of all bearer stocks and shares; (2) the general impression that inscribed shares will be much more difficult to sell and to give as collaterals for loans; (3) the selling by possessors who did not include some bearer share or stock in their declaration for the capital tax; (4) the uncertainty concerning the solution of frequent momentous problems—the huge deficit in the State budget, unwillingness to put an end to the bread subsidy, the advent of workers' control on industry; (5) confiscation of war profits and the enormous payments to be made in cash at a moment when companies have not the liquid means to pay, and the banks are restricting credit. All these factors are pointing to liquidation, restriction of the spirit of enterprise, and inaction of speculators. Quotations are therefore dwindling, even in the face of a depreciating lira.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office : 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000 000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,146,430

Branches :

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

CANADA.—CONFERENCES OVER THE SECURITIES EMBARGO—VIEWS ON EXCHANGE SITUATION—TRADE FIGURES — IMPORTANCE OF FOREST PRODUCTS—BUOYANCY OF REVENUE RETURNS—THE POLICY OF THE BRITISH FOOD MINISTRY—GRIEVANCES OF THE CANADIAN FARMER—STOCK MARKETS—BUSINESS AND EMPLOYMENT CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 1.

DURING the past week the Minister of Finance has held meetings in Toronto and Montreal with the leading financiers and brokers of these cities, at which the policy of limiting Canadian purchases of Canadian securities held overseas was thoroughly discussed. There was some criticism, but in the end both meetings passed practically unanimous resolutions endorsing the continuance of the policy. More than one speaker urged that it should be accompanied by an embargo on luxury imports.

The value of Canadian securities held in Britain to-day is estimated at 400 million dollars, and in view of the exchange situation, it would be exceedingly profitable for Canadians to buy. But the Finance Minister and many bankers of standing hold that free permission to purchase them might seriously imperil the financial fabric of the country. The trade figures for the month of August are still far from comforting. In that month the merchandise entered at Canadian ports was valued at $124,318,041, a considerable increase, and the exports showed a decline at a value of $112,278,064. For the month there was an adverse balance of $12,000,000, as compared with a favourable balance of $35,000,000 in August, 1919. For the first five months of the fiscal year 1920 the adverse balance reaches a total approximately of $143,000,000. One disturbing feature of the situation is the increasing importance of forest products in external trade. Their place in our present national economy is invaluable, and without them Canada would be in a sorry plight, but it should be remembered that in the absence of any save modest afforestation schemes their utilisation means a steady diminution of the national capital. Out of exports valued at $1,219,523,896 for the 12 months ending August 31, 1920, $267,480,144, or almost 22 per cent., represent exports of wood, pulp, and paper, chiefly to the United States. The volume is steadily increasing, and

new schemes for developing pulp areas are continually being launched. During the 12 months in question exports of wood pulp have increased by 8,000,000 cwts, or 80 per cent., and of printing paper by 2,000,000 cwts, or 15 per cent.

It is rumoured that the Finance Minister was somewhat gloomy at the above-mentioned Montreal and Toronto meetings about the general financial outlook, but he has no reason to be despondent about the revenue returns. It has been announced that the new luxury tax would yield approximately $12,000,000 for September, and when the machinery for collection has been perfected an annual revenue of $150,000,000, or $50,000,000 more than the Budget estimate, may be expected. The increase from this and other sources will, it is anticipated, bring the revenue of the Dominion up to approximately $600,000,000, or $200,000,000 more than last year. Before the war the total annual revenue of Canada was $163,000,000, of which $104,000,000 was derived from Customs taxes and $59,000,000 from other sources. In 1920 out of total revenue of $380,000,000, a little less than half was derived from the tariff, viz., $185,000,000. The current fiscal year will see the Customs revenue fully maintained, while the quota derived from other sources will be practically doubled.

The activities of the British Food Controller are arousing considerable criticism in Canada. There is a superabundant apple crop in the province of Ontario, and in many districts the fruit is being allowed to fall and rot simply because the cost of containers and picking is high, and there is no export market in sight which would offer an adequate return. In the Eastern cities fruit is both plentiful and cheap; Baldwins, a good variety of winter apple, cost about $6 to $6.50 per bushel. Yet the London correspondent of the Montreal *Gazette* cables that the Hon. Manning Doherty, Minister for Agriculture in Ontario, was amazed to find that the very class of apples which were going to waste in millions in Ontario were being sold in London at $18 per barrel. During the Nelson B.C. session of the Tariff Commission a leading fruitgrower of the district complained that control in Britain had cut off his export business with Glasgow. Mr Doherty intends to investigate the situation, and find out how far Governmental control, and how far the profiteering habits of middlemen are responsible for this state of affairs. Dr W. T. Grenfell, the famous friend of the Labrador fishermen, recently stated in Canada that the waste of Ontario apples could be paralleled by the waste of excellent Labrador fish, and that he would fain see some means of interchanging the two commodities. The Canadian farmer's motive for raising hogs has diminished, and the marked increase in the sale of brood sows, coupled with the enormous decrease in the number of fat hogs offered for sale, shows that he is abandoning the business of raising pigs. In the month of August the number of hogs offered in the important market of Winnipeg was only a little more than one-third of the number in August, 1918. For the first three months of the fiscal year 1920, which ended on June 30th, the export of bacon and hams had dwindled to 243,435 cwts, as compared with 708,468 cwts in the same three months of 1919. Hogs have in late years been a valuable source of revenue to the Canadian farmer, and he is now being told by his leaders and his politicians that the British Food Controller is responsible for its loss. There are no serious consequences at present, but the trend is dangerous, and it is noticeable that there have been recently a series of strong public protests at the continuance of the British embargo on Canadian cattle, the original excuse for which is now admitted on all hands to have disappeared. The sense of grievance is being fanned by the notion that the refusal of the British Ministry of Food to purchase Canadian wheat is responsible for the stagnation of the Winnipeg wheat market. The opinion in Canada is that with a Conservative majority in the British Parliament, the agricultural interest has for the moment its own way, and does not view with a kindly eye any imports from the Dominion which might lower the prices of home-grown foodstuffs. So Canada is learning that the value of the preference conferred on her amid such a blaze of trumpets in 1919 is highly illusory. But the whole situation affords an admirable warning of the political dangers inherent in any attempt to interfere with the natural course of trade between two kindred communities, and should be carefully studied in this light.

Changes in the bank statement for the last month are small, and are largely those incident to the advent of the crop moving season. Money will continue tight till some avenue for our grain export has been found. Up till the middle of last week the stock markets were almost quiescent, with a few signs of unsteadiness. What appreciation took place in stocks was soon lost. But on Thursday, the 28th, selling became heavier, and prices broke sharply. The liquidation in Montreal was very severe, and a number of stocks touched their lowest level in 1920. The paper group were prominent sufferers, while Atlantic sugar, which was at 117 a month ago, dropped to 80. Some authorities think the worst is now over, but there is no anticipation of a bull market which will send prices of stocks back to their former levels. The index figures of the Dominion Bureau of Statistics record a gradual decline in the cost of living, and the trend of commodity prices, as evidenced by lower quotations for flour, sugar, textiles, and footwear, is markedly downward. It will not be continuous or rapid, but it can only be checked by extraordinary developments. Wholesalers, retailers, and manufacturers alike find business disappointing, and blame the crop situation. Unemployment is beginning to be rife in more than one city, and while there is abundant work on the railways and in the lumber camps for unskilled labour, the supply of skilled labour has come in many localities to exceed the demand. Canada may have to face a winter of industrial depression, and intending immigrants ought to delay their passage till the spring of 1921.

AUSTRALIA.—COMMONWEALTH BUDGET AND LOAN.

MELBOURNE, September 24.

THE Budget speech delivered by the Commonwealth Treasurer, Sir Joseph Cook, on September 16th shows that the estimated revenue for the financial year ending June 30, 1921, on the existing basis of taxation (after deducting £6,865,000 allocated to the six States) would be £52,733,700, and expenditure chargeable against revenue £62,007,578, leaving a deficiency of £9,273,878. This is provided for by additional taxation and postal charges, £3,766,000, and by the balance brought forward at credit of consolidated revenue account, £5,747,423. This leaves an estimated credit balance of £239,545 as at June 30, 1921. The new taxation consists of an addition of 5 per cent. to the existing Commonwealth income-tax, and increased duties on drink and tobacco. The revenue, including the proposed additions, and the expenditure against revenue compare with those for the two previous financial years as follows :—

REVENUE.	1918-19. £	1919-20. £	Estimate, 1920-21. £
Customs and Excise	17,426,970	21,574,559	27,933,000
Other taxation	15,437,516	20,273,131	21,369,000
Total taxation	32,864,486	41,847,690	49,302,000
Post Office	6,110,522	6,744,972	9,322,000
Other revenue	5,741,911	4,190,086	3,740,700
Gross revenue	44,716,919	52,782,748	63,364,700
Deduct payments to States	6,454,333	6,720,492	6,865,000
Net Commonwealth revenue	38,262,586	46,062,256	56,499,700
Expenditure	38,665,348	43,837,891	62,007,578
Surplus	..	2,224,365	..
Deficit	402,762	..	5,507,878

Amongst reasons for the growth of expenditure are the increases in interest and sinking fund on war debt, war pensions, and repatriation expenditure, and the transfer of certain forms of expenditure incidental to the war, hitherto charged against loans, to the ordinary revenue and expenditure account, these reasons being in addition to the tendency of ordinary expenditure to increase. The interest on war debt for 1920-21 requires £17,543,656, sinking fund at 1 per cent. (instead of ½ per cent., as hitherto), £3,168,820, and war pensions, £7,250,000.

The estimated loan expenditure for 1920-21 is £29,768,444, of which £4,368,444 is for shipbuilding and public works and £25,400,000 is for war and repatriation

purposes, the latter figure comparing with £45,439,414 in 1919-20 and £62,192,889 in 1918-19. The Commonwealth public debt at June 30th last, including indebtedness to the British Government, consisted of £335,496,489 on war account, and £45,918,827 on other accounts (inclusive of £16,750,000 loans issued in London on behalf of the States), making together £381,415,316.

The 6 per cent. Commonwealth Peace Loan closed on September 13th, having been reopened for a few days after the original date of September 6th. The total subscribed, subject to slight alteration, is £25,156,850. This makes a grand total of £238,630,240 raised by the Commonwealth Government within Australia since local borrowing for war purposes began in 1915, while after deducting repurchases on account of the sinking fund, &c., the amount outstanding in the hands of the Australian public in respect of the seven War and two Peace Loans is £232,406,290. As the latest loan is mainly for land settlement in connection with repatriation, the Treasurer has announced that "as the money is repaid it will go to the fund for the cancellation of the debt." The demand for money for repatriation expenditure, in the meantime, is tending to grow. The original estimate for land settlement for this purpose was £28,000,000, but the latest estimate is £49,838,235, to make provision for about 38,000 ex-soldier settlers.

CUBA.—THE FINANCIAL CRISIS—FAR-REACHING EFFECTS OF THE COLLAPSE.

(BY OUR LATIN-AMERICAN CORRESPONDENT.)

HAVANA, October 29.

THE economic position here is undoubtedly serious. The financial collapse has not alone produced a situation highly exciting to the Latin-American temperament, but contains the germs of future trouble by shattering public confidence in the native-run banks and other monetary institutions. The oldest bankers here, who have talked with the writer, unanimously deplore this loss of public confidence, and regard it as possibly the most damaging feature of the whole financial position.

The declaration of an indefinite moratorium—for the first time within the memory of Spanish-American banking houses—has created something like dismay, and the general fear is expressed that immediately the banks are reopened—no matter what amount of support they may receive from American financiers or between themselves—there will be a mad rush of nervous country depositors, forming the great bulk of the Havana banks' customers, who will not again consent to leave with them their savings for a generation at least. It is this fear that is inducing the authorities to continue the life of the moratorium beyond the original date given for its cancellation—namely, December 1st.

The present banking position could hardly have existed had there been in force some kind of Government control; but there is practically none. There is no recognised banking law in Cuba; anyone and everyone may be authorised to start a bank to accept deposits, and apparently to use them as and where it is found expedient. While the Government possesses the prescriptive right to enter a bank and to demand to see the books, such a procedure is scarcely ever heard of; all that the monetary institutions are called upon to do is to render at each half-year—namely, in July and January—statements showing the position of the bank, the July statement being a mere list of figures portraying the assets and liabilities, while the second half-year statement is usually more full and complete. But no check or investigation is applied to the accuracy of the balance-sheets, and except in times of upheaval, such as those through which the community is at present passing, the authorities would appear to trouble but little about the soundness or otherwise of the different financial institutions of the country.

Cuba is over-supplied with banks, some of which are mere money-lending establishments, themselves engaged in speculative undertakings; during the last three years these have sprung up like mushrooms. One such establishment, the first to go down, had created in the three brief years of its existence no fewer than 105 branches, some 20 or 30 of which were until lately to be found in Havana, the remainder being distributed throughout the island established in even the smallest villages. It is the hard-earned and laboriously-collected savings of the peasant and labouring classes that have been—temporarily at least—engulfed. According to the terms of the moratorium (Clause 4), within the period of its life depositors are enabled to draw no more than 10 per cent. on current account and 12 per cent. on savings account below the sum of $2,000. It is not difficult to imagine the effect of this decree upon the none-too-intelligent mind of the average Cuban *peón*. It is useless to tell him that the deprivation is only "temporary"; he fears the worst, and coming at this time of political excitement attendant upon Presidential elections, the calamity is greatly aggravated.

But it is by no means the peasant and working-class depositors alone who are adversely affected. Small shopkeepers who have wages to pay, importing houses which must meet their foreign bills as they fall due, others who have to find the wherewithal to defray the heavy Customs, transport and other duties levied upon all goods entering the country, are placed in a most invidious position, one which must, unless speedily relieved, in the end lead to insolvency. Even the great transportation companies are being put to the greatest inconvenience in meeting their heavy weekly wages bills, and one instance of the strained situation has been afforded within the past day or so by over 1,000 unpaid labourers leaving work at the already congested docks, where much-needed foodstuffs and other commodities are rotting from lack of removal to storerooms and warehouses.

While the soundest monetary institutions, among which may be ranked the British banks established here, can perhaps afford to watch the outcome of events unperturbed, they—in common with all similar monetary institutions—confess to the belief that they will feel the effects of the upheaval for a year at least. Strangely enough, so far from commodity prices falling in proportion to the lessening of the amount of money in circulation, they continue to soar; since the date of the moratorium decree, October 10th, the cost of living in the city of Havana has actually advanced by between 6 and 10 per cent. The greater part of the community must be living upon credit; and, as we have been told, "public credit is suspicion asleep."

SWITZERLAND.—A TRUST COMPANY'S DIFFICULTIES.—BORROWING IN AMERICA.

(FROM OUR CORRESPONDENT.)

GENEVA, November 6.

THE reconstruction of the Zurich Elektrobank is not yet finished, and already a second holding-company has to apply to its bondholders, and propose an agreement. That is the Basle Société Suisse pour l'Industrie Electrique, a very carefully managed financial trust, with a paid-up share capital of 20 millions, and outstanding bonds to the amount of 60 millions. The breakdown of this concern is not due to the fall of the German mark, though it was in near connections with the Berlin Siemens group; it is the depreciation of the Italian lire and the French franc which makes a regular service of the bonds impossible. The board proposes the transformation of the present bonds into preferential shares, with cumulative dividend, and the reduction of the present shares to one-fifth of

their nominal value. Also in this case the legal scheme of "currency assurance," as forecasted by the Swiss Government, would only spoil a sound reconstruction.

The Swiss appeal to the United States money market goes on, and the American loan becomes for more and more Federal, Cantonal, and Municipal treasuries the only issue for the present credit crisis. The town of Berne just settled a contract for four million dollars, the Swiss Federal Railways are discussing 25 million dollars, and the series is not yet finished—the Americans unfortunately do not only import their money, but they import into Switzerland also their prices of money. This means a serious trouble to the Swiss investment market. The idea of the Federal Council that loans of the Swiss authorities in America might create an easier situation in the money market at home proved to be a false prophecy. On the contrary, the average investor became upset and suspicious at the same time. The more than 9 per cent. which Zurich had to grant to American moneylenders immediately depreciated the value of the old securities, with a lower interest quoted in the Swiss bourses, though these American loans are nowhere quoted in Switzerland. The consequence is that the Swiss Cantonal banks, which ordinarily enjoy the fullest confidence of the investing public, and who are as a rule the mortgage creditors of the building trade, no longer find the necessary money for assisting present building, which is only on a very insufficient and modest scale at present. It has never happened before that the issue of bonds of the Cantonal banks was not sufficient to cover the demand of the building trade for good first-class mortgage loans. Now the scarcity of money has become so strong that the Cheque Department of the Federal Postal Service was authorised last week by the Government to invest the money of the cheque creditors in mortgage bonds of the Cantonal banks.

DENMARK.—THE TRADE BALANCE—EXCHANGES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 6.

THE commercial balance apparently goes from bad to worse, the figures for September showing imports amounting to an aggregate of 338,000,000 kr, the highest sum for any one month of the current year, and against an average per month of last year of some 200,000,000 kr, the exports for September amounting to 178,000,000 kr. The aggregate imports for the first nine months of the current year amount to about 2,300,000,000 kr, against 2,500,000,000 kr for the whole of 1919, but the total result for 1920 will all the same in all probability compare somewhat favourably with that for 1919, inasmuch as the exports for the first nine months of the current year amount to some 1,300,000,000 kr, against rather more than 900,000,000 kr for the whole of 1919. Strenuous efforts are also being made to exploit the country's resources of fuel, such as lignite, peat, and wood. If properly worked these commodities should be able to greatly reduce the imports of coal and coke. In September alone the imports of coal and coke amount to 118,000,000 kr. The foreign exchanges show no great changes; the £ keeps in the vicinity of 25.50; dollars have been very firm, being yesterday quoted at 746.00; marks are down at 9.50 (in Stockholm 6.45), francs have receded to 45.75.

NORWAY.—A SUGAR DEAL—PLANS FOR A FORCED LOAN—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 4.

THE Oversea Export and Import Co., Limited, is one of the most important commercial ventures of Norway. It was incorporated 22 years ago, and has ramifications all over the globe. Very ably managed, it has been doing an excellent trade, which has been reflected in the satisfactory dividends. Quite recently it met with a serious misfortune. One of the company's branch offices, the Java Oversea Co., at Batavia, made extensive purchases of sugar. Unfortunately the price of sugar fell just after these purchases were completed, and what would otherwise have been a successful enterprise was turned into a sad failure. It is stated that no less than 10 millions or 12 million krones will be lost. The branch is, however, registered as an independent company, and it has now been decided to hand its affairs over to a receiver. The parent company will then have to shoulder the loss incurred in proportion to its interest in the branch, but it will not be affected to such an extent as to necessitate the winding up of its affairs. Steps are being taken to secure fresh capital by subscription of preference shares, and although the money market here is tight, it is expected that the capital will be forthcoming. Much sympathy is felt throughout for the concern, which is at the bottom really a good one.

The Finance Minister has announced his intention to raise a public loan of 150,000,000 kr. Application is to be made to the foreign money market for this sum, because the home market will be drawn upon for other purposes.

The late Government made preparations for a levy on capital—on fortunes from 200,000 kr and upwards—on a progressive scale. That Government having gone out of office—on a quite different question—the new Finance Minister has abandoned the idea of capital levy, but as money must somehow be procured, mainly to meet the consequences of the dearth, some other means of supplying it must be devised. The Minister's plan is to raise an inland loan, forced, if necessary, all holders of capital to the extent of 200,000 kr or more being liable to subscribe proportionately. Interest and repayment of the said loan would, however, have to be made by taxation of those same holders of capital, but the repayment to be effected during so long a period that the payment of the instalments would not inconvenience the taxpayers.

Interesting statistics of wholesale price movements have now been prepared by two different parties, the one quite independent of the other. One of these compilers is the editor of the mercantile newspaper, *Farmand* ("the Merchant"). Ever since that paper was started, 30 years ago, it has contained a weekly statement of the wholesale prices of some of the most important commodities. Starting with 1891 as basis, at 10 per cent., the table shows the prices of 28 different articles, year by year. Up to 1897 the prices were constantly declining, and reached the bottom record of 85.1 per cent Then there was a gradual rise, relieved by some falls, until 1914, when the percentage, as compared with 1891, was 127. But then the increase set in in earnest, and went on by leaps and bounds thus :—

	%		%
1915.....	182·2	1918.....	418·2
1916.....	248·4	1919.....	403·9
1917.....	391·1	1920 (end of September)..	445·5

The second statistician is Mr Diesen, who, in his *Economical Review*, starts at the outbreak of the Great War. Basing his calculations on 93 articles, his results coincide remarkably well with those of *Farmand*. Compared with 1913, he arrives at a figure of 425 per cent. for September 20th this year. For the sake of comparison, he subjoins the *Economist* index number as at September 20th of 295 per cent. for Great Britain, thus showing an enormously larger increase for Norway. One of the chief items of this excessive rise is the increased cost of cokes and coals for railway, steamship, domestic, and industrial purposes, the increase being 20-fold or thereabout. The index for October shows some decline, and this indicates that a turn of tide has set in which is supposed to be permanent.

SPAIN.—BANK RATE RAISED.

(FROM OUR CORRESPONDENT.)

MADRID, November 6.

THE Bank of Spain has raised its discount rate to 6 per cent. The interest on deposits is raised to 4½ and 5½ per cent. according to their nature, and the charge on personal overdrafts to 6½ per cent. It is considered that by this measure the depreciation of the peseta will be checked, and that a decline in the cost of living in Spain will follow.

Letters to the Editor.

THE PEACE CONFERENCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of October 2nd, I note a reference to the fact that the problem of Shantung is omitted in Volume II., and that you had been unable to find the name in the index or any discussion of the problem in the text. Might I venture to point out that on page xxix. of the introductory matter to Volume I. the reason for this is explained, and the treatment of it is relegated to the fifth volume. It is also mentioned three times in the index to Vol. I. There are also some other passages there dealing with the arrangement of the various volumes which will, I think, possibly explain to you more clearly the scheme of arrangement which you seem to find so difficult to understand.—I remain, faithfully yours,

HAROLD M. TEMPERLEY,
Editor, "History of the Peace Conference of Paris."
107 King Henry's road, Primrose Hill, N.W.,
November 5th, 1920.

CZECHOSLOVAK PAYMENTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you allow me to familiarise your readers who are owners of Czechoslovak stocks and shares with the course that will enable them, in the near future, I hope, to obtain payment of interests and dividends accrued during the war :—

1. The payment of interests and dividends is based upon reciprocity, and collection will be possible as soon as an agreement is reached between the two Governments concerned, which it is hoped will be in the near future.

2. The British owner will be asked to prove that the stocks and shares were, on March 12, 1919, and are still, on territory which is outside the boundaries of the Czechoslovak Republic.

3. That the owner is not a Czechoslovak citizen, and has been residing outside the Czechoslovak Republic.

A certificate affidavit to this extent will be issued on application by the Czechoslovak Legation, and will verify statements under par. 2 and 3 on ground of which payment will be obtained.—I am, Sir, your obedient servant,

L. K. NEUMANN (Commercial Attaché).
Czechoslovak Legation, 8-9 Grosvenor place, S.W. 1,
London, November 8th, 1920.

Books and Publications.

REVIEWS.

"Some Aspects of the Inequality of Incomes in Modern Communities." By Hugh Dalton, M.A., Cassel Reader in Commerce in the University of London. Routledge.

THIS interesting and suggestive book is one of the series of monographs by writers connected with the London School of Economics, and edited by its Director. Mr Dalton shows that at present "the opinion steadily gains ground that there is at least a presumption against all economic inequality" (which is perhaps rather too sweeping as it seems to imply that opinion is growing in favour of equal incomes for all); that "the possessors of abnormally swollen incomes are coming more and more to be regarded as somewhat unwholesome economic freaks," and that great inequality of incomes implies considerable waste of potential economic welfare—"the rich are more than amply fed while the poor go hungry." He considers that the effect of inheritance in producing inequality has not received the attention that it deserves from economists, and proves his point by a review of economic opinion from pre-Adam-Smithite days; and he discusses the problem of checking inequality produced by inheritance without checking the accumulation that is necessary to production and development. He will find many sympathetic readers among wealthy people who are increasingly alive to the evils produced by huge fortunes passed into inexperienced and irresponsible hands. And even those who do not agree with his rather complicated proposals will find the book clear, stimulating and readable.

"The Practice and Law of Banking." By H. P. Sheldon. Demy 8vo, 496 pp. Macdonald and Evans, 29 Essex street, W.C. 2. Price 12s 6d net.

THIS book achieves in very fair measure the author's object, which is "to provide, for the practical bank man and for the student of English banking law and practice, a manual sufficiently extensive in scope to meet present-day requirements." Details of the practical business of banking are given very clearly, and at the same time the points of law which arise in carrying out these details are explained and references made to the statutes and principal reported cases. Lawyers will regret the omission to state where these cases are reported—they are merely referred to by the name and the year of the decision. But the reader, be he lawyer or layman, will welcome the excellent index.

The chapters on "Indorsements" and "Banker and Customer" are of special interest. Specimen indorsements are given showing correct and incorrect methods. It is surprising to learn that a cheque payable to "William the Conqueror or order" may be treated as a cheque to bearer; one may express a doubt whether a banker would so regard it, notwithstanding the Bills of Exchange Act. Most of the illustrations, however, are of practical value, and the author's comments accurate. The recent case of Banbury *v.* Bank of Montreal is fully explained. This case, which caused some surprise, decided that a banker may be liable in respect of negligent advice given to a customer about investments, and that Lord Tenterden's Act was no protection. Mr Sheldon's book is a useful addition to the business man's library.

Commerce Monthly. Vol. II., No. 7. November, 1920. (New York) National Bank of Commerce.

In the November issue of this magazine, in an interesting article on "International Cable Communication," it is shown that British interests own and operate more than half of the cables now in use. At the present time, too, Great Britain possesses a practical monopoly of cable manufacture, which is strengthened by British control of the gutta-percha market. Although far behind the British system in the point of mileage, the American-owned cables are second in importance, and connect all the American possessions, as well as the canal zone and the naval base at Guantanamo, Cuba, with the continental United States, thus providing the nucleus of a comprehensive American system. Next in importance at present to the American-owned cable lines is the French system. Before the war Germany had developed ambitious plans for a cable system connecting the

Fatherland with all the German colonies. Under the reparations section of the Treaty of Versailles Germany was compelled to renounce, on her own behalf and on behalf of her nationals, all rights to the effective portion of these cables.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
November 25.	November 26.

The character of Stock Exchange business during the week just ended has been irregular and patchy. In certain markets, on some days, a good deal of trade came along, but difficulties of dealing have been accentuated by the vagaries of foreign exchanges. Resumption of work on the part of the coal miners has almost been forgotten as a Stock Exchange factor. Liquidation of commodity stocks in America has been indirectly reflected in various Stock Exchange markets in London, where that for rubber shares, for instance, weakened noticeably on a fresh drop in the price of the raw material brought about by financial difficulties in the States.

The Stock Exchange commemoration of Armistice Day was marked by a solemnity and seriousness which led to a sensible contraction of business on Thursday morning. Taken throughout, the week cannot be said to have brought activity to the House, and the unemployment recorded in various branches of industry throughout the country has begun to make itself felt in Stock Exchange circles also.

The War Loan and gilt-edged stocks keep their prices with a good deal of strength. The War Loan made substantial upward progress. Metropolitan Water "C" stock started at $\frac{3}{4}$ discount in the market, for underwriters found themselves left with 84 per cent. of the issue. But buyers quickly appeared, and the discount narrowed appreciably. Certain of the National War Bonds which were in short supply a week ago have come more freely to market during the past few days; the 6 per cent. corporation and county stocks continue in greater demand than supply. The new Local Loans scrip, after being $\frac{1}{8}$ premium, reverted to its par price, and India sterling stocks lost part of an improvement gained early in the week. In the foreign market, the American rate of exchange brought new rises to the Japanese "dollar" stocks, and also to the other securities, the interest and principal on which are payable in dollars. According to the movements in the New York exchange, so these prices have fluctuated, without, in many cases, any stock changing hands. The investor continues to buy Chinese issues, and speculative buying of Mexican Government bonds brought about substantial rises in these issues, though rumours of fresh revolutionary trouble in Mexico led to relapses from the best.

The Home Railway market has proved disappointing to holders of the stocks, for prices have sagged without any resistance being offered to the comparatively small volume of selling which followed the recent rise in quotations. All the ordinary, deferred, and preferred converted ordinary stocks have suffered, Hull and Barnsley being exceptional in maintaining a show of strength on the execution of a few simultaneous purchasing orders. Home Railway prior-charge stocks are steady, and still attract support, but for the others there is no public demand, and a long list of falls is left as a result of the week's work. Grand Trunks are a little better, on the expected return to-day from Canada of the chairman, Sir Alfred Smithers, who may be able to tell something definite of the progress in the matter of the Arbitration. Argentine railways pursued their usual erratic course, leading off firmly at the beginning of the week and giving way towards its finish. Brazilians have been a heavy market, San Paulos and Leopoldinas both giving way. The nitrate market is hardly so firm as it was. Mexican Rails enjoyed a spurt, in consequence of the news from the country reported in the *Economist* last Saturday (p. 818), and the rumours of revolutionary trouble in the country were listened to rather than believed. Mexican Utility bonds are several points to the good.

Rubber shares are flat and nervous, owing to a fall in the commodity to 1s 1d per lb. There has not been much selling, but, with buyers almost completely absent, it required few realisations to weaken the list throughout. The oil market has drifted into a semi-professional condition, for the public is not doing anything like as much as it was two or three months ago. The possibility is being canvassed of the production of oil overtaking demand, and the approach of the end of December is put forward as a reason by some of the oil shareholders for selling their shares. However, the market developed pronounced strength on Thursday afternoon, when a brisk renewal of buying lifted several of the favourites.

Courtaulds experienced one of the periodical jumps upon circulation of further rumours about a bonus issue being contemplated in the near future. A mild sensation in the Banking market hoisted Chartered Bank new shares from $4\frac{1}{2}$ premium, at which dealings began early this week, to 45s higher. Insurance shares have been placid, and in the shipping list last week's strength has been succeeded by reaction in P. and O., Royal Mail, Indo-China, and a few of the lower-priced favourites. The Motor Show furnished an advertisement for certain shares in the motor market, which, however, failed to derive much net benefit from this consideration. Cable stocks and shares are strong throughout. The hotel list inclined to ease off, while catering shares display no particular changes beyond a recovery in Maypole deferred. Iron, coal, and armament industries attract little active attention. With so many new investments daily spread before them, investors nowadays require a good deal of temptation before they put more money into the older shares.

The Kaffir market has jogged along in monotonous fashion, with Randfontein Estates as one of the few shares to give any sign of life. Even in their case the improvement was confined to a few pence. Labour trouble on the City Deep caused a trifling heaviness amongst the deep-levels generally. De Beers dropped at one time to 16, but this brought in a few buyers, and part of the fall was recovered. A good strike on the Globe and Phœnix led to the price of the shares rising to over 20s, though lack of driving power caused a subsequent decline to 19s 6d. The life has gone out of Esperanzas and other Mexicans, business dwindling to a mere shadow of what it was two or three weeks ago. Broken Hills are distinctly better, upon the definite news that work is about to be resumed on the Barrier field within the course of the next fortnight. Copper shares are dullish, Mount Lyell having passed its dividend, and Rio Tintos coming on offer from Paris. The further fall in the price of tin accentuated the stagnation previously existing amongst shares in companies connected with the metal, and the Indian mining list is exceedingly quiet. Russo-Asiatics dropped from 13s 6d to 11s 6d, before a partial rally ensued, and Northern Explorations dwindled because the recent support has been withdrawn.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Jute Industries Limited

(Incorporated under the Companies Acts, 1908 to 1917.)

CAPITAL - - £7,000,000

Authorised.	DIVIDED INTO	Issued and fully paid (exclusive of the present issue.)
£4,000,000	Nine per cent. Cumulative Participating Preference Shares of £1 each	£500,000
£3,000,000	Ordinary Shares of £1 each - - - - - - - -	£1,500,000

The Cumulative Participating Preference Shares confer the right in priority to the Ordinary Shares to a fixed Cumulative Preference Dividend at the rate of 9 per cent. per annum on the capital paid up thereon and the right **to an additional dividend up to 6 per cent.** on such capital payable out of one-third of the remainder of the profits distributed. The Ordinary Shares confer the right to the remainder of such profits.

THE LONDON JOINT CITY & MIDLAND BANK, LTD., and THE CLYDESDALE BANK, LTD.,

ARE PREPARED TO RECEIVE APPLICATIONS ON BEHALF OF THE NATIONAL AND PROVINCIAL INVESTMENT TRUST LIMITED, THE SUBSCRIBERS, WHO

OFFER FOR SALE

2,500,000 Nine per cent. Cumulative Participating Preference Shares of £1 each at par

of which 1,000,000 Shares have been sub-underwritten by the Directors of the Associated Dundee Companies (hereinafter mentioned) and their friends (500,000 Shares having been applied for and sold to them firm).

Directors:

J. ERNEST COX, Chairman of Cox Brothers, Limited, Chairman.
LOUIS GRIMOND MACINTYRE, Chairman of J. & A. D. Grimond, Limited, Vice-Chairman.
ARTHUR J. COX, Director of Cox Brothers, Limited.
F. NORMAN J. BELL, Director of Thomas Bell & Sons, of Dundee, Limited.
GERARD L. BEVAN, Chairman of City Equitable Fire Insurance Company, Limited.
GEORGE A. GILROY, Chairman of Gilroy, Sons & Co., Limited.
CLARENCE C. HATRY, Managing Director of Commercial Bank of London, Limited.
JOHN N. KYD, Chairman of John N. Kyd & Co., Limited.
F. M. RICHARDSON, Director of J. & A. D. Grimond, Limited.
Sir ALEXANDER ROGER, Director of British Insulated and Helsby Cables, Limited.
H. GILES WALKER, Director of Harry Walker & Sons, Limited.
T. H. H. WALKER, Director of Harry Walker & Sons, Limited.
A. S. WILLETT, Director of John N. Kyd & Company, Limited.

Bankers:

LONDON JOINT CITY & MIDLAND BANK, LIMITED, Head Office: 5, Threadneedle Street, London, E.C.2, and Branches.
THE CLYDESDALE BANK, LIMITED, Glasgow and Branches.
BELFAST BANKING COMPANY, LIMITED, Belfast and Branches, Ireland.

Solicitors:

J. D. LANGTON & PASSMORE, 37-41, Gracechurch Street, London, E.C.3, and 2, Paper Buildings, Temple, London, E.C.4.

Brokers:

ELLIS & COMPANY, 7, Cornhill, London, E.C.3.
CARRICK, BARCLAY & COMPANY, 86, St. Vincent Street, Glasgow.

Auditors:

R. C. THOMSON & MURDOCH, Chartered Accountants, 11, Reform Street, Dundee.

Secretary and Registered Offices:

J. G. DIXON, 37-41, Gracechurch Street, London, E.C.3.

The following particulars are taken from the Full Offer for Sale:—

The Company has acquired or contracted to acquire the whole of the Ordinary Share Capital of the following Companies:—

THOMAS BELL & SONS OF DUNDEE, LIMITED.
COX BROTHERS, LIMITED.
GILROY, SONS & COMPANY, LIMITED.
J. & A. D. GRIMOND, LIMITED.
JOHN N. KYD & COMPANY, LIMITED.
HARRY WALKER & SONS, LIMITED.

and also the whole of the Preference Share Capital of J. & A. D. Grimond, Limited.

The Associated Companies are chiefly engaged in the manufacture of cloth used by British, American, and European Linoleum and Floorcloth Manufacturers, and together they will control a preponderating proportion of the wide goods trade. Very great care and experience in the weaving and finishing of this fabric is required, and although the Indian Jute Mills have repeatedly attempted to produce a satisfactory article, they have always failed owing, among other things, to climatic conditions. Indian competition is now confined to ordinary hessians, sacking, baggings and tarpaulins, and outside of this group the specialities as enumerated below are not affected. Each of the companies specialises in some commodities, such as Brussels, Wiltons and other makes of Carpets or Squares which are made in all qualities, decorative fabrics, tapestries, curtains, bonding, webbing, etc. Special makes of yarns from the very finest sizes, are put up in a special form to suit the requirements of certain trades, are also produced.

ASSETS

The lands, buildings, motive plant, machinery, &c., are valued on a conservative basis at £6,778,356 3s. 9d., the Valuers pointing out that the present replacement value would of course be considerably higher.

The net assets of the companies are certified by the Auditors at **£8,153,218 17s. 6d.**, no amount having been included for goodwill.

PROFITS.

The pre-war standard of profit as adjusted for Excess Profits Duty, including the allowances brought up to date, is **£344,464.**

The profit for the five years 1916-1920 (down to the close of the last respective accounts in 1920) before providing for Income Tax and Excess Profits Duty, but after providing for management, usual depreciation and also the dividends and interest on existing Preference Capital and debentures amounting to £8,560 per annum (now increased by £12,687 10s. per annum), were as under:—

1916	... ...	£628,300 3 6
1917	... ...	621,483 5 5
1918	... ...	734,530 14 7
1919	... ...	1,224,139 17 11
1920	... ...	1,497,557 15 4
		£4,706,161 16 9

Or an **annual average of £941,220 7s. 4d.**

While the profits of the Associated companies in the immediate future are likely to remain at a high level and may even in some cases exceed those of the past year, it is improbable that this increase will continue or that the profits as shown for the respective financial years ending in 1920 will be fully maintained. On the other hand, bearing in mind:

(a) The steady expansion of the linoleum trade and the increasing demand for this class of goods both in the United States and on the Continent.
(b) The great economies in operation which are certain to result from the unification of previously conflicting interests.
(c) The improved facilities for the purchases of raw material.
(d) The stabilisation of selling prices.
(e) The large sums reinvested in the businesses during the past few years in new plant and machinery of the most modern type.
(f) The fact that the main products of the Associated companies are sold for a considerable period ahead at remunerative rates.

the Directors are of opinion that the pre-war standard of profits affords no criterion whatever of the present and future earning capacity of the businesses included in this amalgamation.

The Full Particulars of Offer, with Application Form, can be obtained from The National and Provincial Investment Trust, Limited, 95 and 97, Finsbury Pavement, London, E.C.2, or from the Bankers, or Brokers, or the Offices of Company, as above.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. Holders of Exchequer bonds maturing on December 1st are given the privilege of using their bonds ex dividend as the equivalent of cash at par as on November 18th for the purpose of subscription to Treasury bonds, in addition to receiving a full six months' dividend on December 1st on their maturing Exchequer bonds. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Lever Bros., Limited.—Authorised capital £130,000,000 of which £42,007,609 has been issued and is fully paid. This is an offer for sale of 4,500,000 20 per cent. cumulative preferred ordinary shares of 5s each, at 10s 9d per share. This issue ranks immediately after £37,246,943 of preference capital. The proceeds of the present issue will be utilised to finance "Mac Fisheries, Limited, and other allied companies." These shares were acquired from Lewis and Harris Welfare and Development Company, Limited, of which company Lord Leverhulme is chairman. The present vendors are the British, Foreign, and Colonial Corporation, Limited, who paid 9s 9d per share for 2,000,000 shares, and who were granted an option on 2,500,000 further shares at 10s 3d per share. All expenses of this issue are paid by the corporation. It is, however, equally important for investors to know the price which Lever Bros., Limited, obtained for the shares. or, alternately, the relation of Lewis and Harris Welfare and Development Company, Limited, to Lever Brothers, Limited. But Lord Leverhulme is a law unto himself in company finance, and the successful record which he is able to chronicle in this statement of his company will be deemed by the average investor sufficient argument for subscribing to the present issue. It is not clear who holds the 2,500,000 shares, part of this issue of 4,500,000 shares now offered for sale by the British, Foreign, and Colonial Corporation.

Jute Industries, Limited.—Authorised capital £7,000 000, divided into 4,000,000 9 per cent. cumulative participating preference shares of £1 each and 3,000,000 ordinary shares of £1 each, of which 500,000 preference and 1,500,000 ordinary shares have already been issued. This is an offer for sale of a further 2,500,000 cumulative participating preference shares at par. In addition to the dividend of 9 per cent. on the preference shares, such shares are also entitled to have out of one-third of the remaining profits increased dividends up to a total of 15 per cent. in all. The company was recently formed to acquire the control of businesses engaged in the spinning of jute and other fibrous material and of the manufacture of jute cloth, carpets, and other commodities. The company has acquired or contracted to acquire the whole of the ordinary share capital of the following companies:—Thomas Bell and Sons of Dundee, Limited, Cox Brothers, Limited, Gilroy, Sons, and Co., Limited, J. and A. D. Grimond, Limited, John N. Kyd and Co., Limited, Harry Walker and Sons, Limited, and also the whole of the preference share capital of J. and A. D. Grimond, Limited. Net assets are valued at £8,158,217, and no amount has been included for goodwill. Independent valuations are submitted, and it is noteworthy that land, buildings, plant, &c., are valued at £6,778,356. Profits are given before providing for excess profits duty, &c., for five years from 1916. The pre-war standard of profit is £344,464. This "offer for sale," in referring to increased war time profits, admits that "it is improbable that this increase will continue, or that the profits as shown for the respective financial years ending in 1920 will be fully maintained." Investors should note that this is an "offer for sale," and not a prospectus, and that promotion profits are not disclosed, otherwise this is a fair industrial issue, where the high yield is commensurate with the risk involved.

William Beardmore and Co., Limited.—Authorised capital £8,000,000, in shares of £1 each, of which 2,050,000 ordinary shares have been issued, and 1,440,000 6 per cent. cumulative preference shares (free of income-tax up to 1s 2d in the £). There are also outstanding £532,000 4½ per cent. first mortgage debentures. This is an offer for sale of £1,000,000 8 per cent. seven-year notes at 97½ per cent., redeemable at par. The company agrees that so long as the issue is outstanding not to mortgage further the assets of the undertaking with certain exceptions, including the right to mortgage assets to bankers for advances obtained in the ordinary course of business. It should be noticed, however, that the company reserves power to issue a further £1,000,000 of notes. Surplus assets are stated to be worth £8,060,776, including the proceeds of the present issue, but excluding anything for goodwill. Thus, althongh short-term notes are not regarded favourably by investors in some quarters, this particular issue has a wide margin of security. Moreover, profits are given from 1910, and these show that the company should be able to meet interest demands with ease.

Westinghouse Brake Company, Limited.—Authorised capital £1,200,000, divided into ordinary shares of £1 each, of which 1,015,032 shares have been issued and are fully paid. This is an issue of £350,000 8 per cent. registered first mortgage debentures at 95 per cent. The debentures will be repaid on or before November 1, 1944, by an accumulative sinking fund, to be applied half-yearly in purchasing debentures in the market at or below par or in drawings at par. The company reserve power to issue a further £150,000 of similar debentures ranking *pari passu* in all respects with the debentures now issued. After November 1, 1927, the company "may redeem" these debentures at par on giving three months' notice. The issue will be secured by a trust deed, constituting the debentures a first specific charge on the company's land and buildings, fixed plant and machinery, and a floating charge on the undertaking and all other assets of the company. The company is a combination of the business of the Westinghouse Brake Company, Limited, and the Consolidated Signal Company, Limited, and the name of the company is about to be altered to the Westinghouse Brake and Saxby Signal Company, Limited. The Westinghouse Brake Company, Limited, was formed in 1881, with a capital of £500,000 in ordinary shares, to acquire all of the rights of the Westinghouse Air Brake Company of Pittsburgh in Great Britain and Colonies (exclusive of Canada) and on the Continent of Europe. In 1896 the capital was reduced to £399,280 by repayment at par out of reserves utilised for purchasing and cancelling shares, with the sanction of the Court. In October, 1920, the capital was increased to £1,200,000, to provide for the purchase of the assets of the Consolidated Signal Company, Limited, and to enable a distribution of a bonus of 50 per cent. in shares to be made among the shareholders on the capitalisation of part of the reserves. Profits are set out from 1910. Surplus assets are given as £1,101,119, excluding goodwill and patents. Land, buildings, and plant—taken, it is stated, "at cost (mostly pre-war)"—amount to £282,942. It would have been better, perhaps, if the proportion of buildings at pre-war cost was mentioned. With this exception, the prospectus is a clear statement of affairs, and worthy of the investors' attention.

Sheffield Steel Products, Limited.—Authorised capital £4,000,000, in shares of £1 each, of which (including the present issue) 1,000,000 10 per cent. cumulative preference and 1,550,000 ordinary shares have been issued. This is an issue of 1,000,000 10 per cent. cumulative preference shares at par. The company was formed in 1918, and converted into a public company in August, 1919. It is an amalgamation of ten businesses engaged in the Sheffield light trades, such as table cutlery, scissors, pliers, spanners, &c. The firms taken over were W. K. and C. Peace, Limited, Carr, Wild, and Co., Limited, Boswell, Hatfield, and Co., Limited, Moses, Eadon, and Sons, Limited, E. W. Cheesman and Co., Joseph Peace and Co., Limited, Arnold and Son, Chaucer Plating Company, Sheffield Scissors, Razor and Tool Company, Limited, and Oxley Brothers, Limited. It is also proposed to acquire three other undertakings. Profits are given from 1916. Net assets, exclusive of goodwill but including the proceeds of the present issue, amount to £2,983,734. The prospectus is a clear statement of affairs, and the shares are a fair offer of their class, subject, of course, to industrial risks and future depreciation from boom values.

City General Trust, Limited.—Authorised capital £1,000,000, in ordinary shares of £1 each, of which 253,028 shares have been issued. The first annual report states:—"The directors are also prepared to give present shareholders the opportunity of subscribing at par for an additional number of shares, equal, as nearly as may be, to one-fifth of their present registered holdings. On the shares so taken up an allowance of 5 per cent., equivalent to 1s per share, will be made, which will be paid to the applicant forthwith." In the balance-sheet for its first year's trading, investments at £127,412 are taken at cost, but, on the other hand, the premium of 1s per share on the original issue, amounting to £12,373, has been devoted to writing down preliminary expenses, and £31,500 has been placed to a general reserve out of profits. A dividend of 10 per cent. has been declared. We reviewed the flotation of the undertaking in the *Economist* for May 24, 1919 (see page 968). It may be that the company will prove successful, but as latest transactions are marked for the original £1 shares in the Supplementary List at 15s 3d-15s 9d, it is difficult to see how the offer can be attractive to shareholders.

The Falkirk Iron Company, Limited.—Authorised capital £500,000, in ordinary shares of £1 each, of which 250,000 shares have been issued. This is an issue of £200,000 8 per cent. first mortgage convertible debentures at 95 per cent., redeemable at 102 per cent. by annual drawings before 1935. The company was incorporated in June, 1920, as successor to the Falkirk Iron Company, Limited, a private company, to acquire the business of general ironfounders, &c., founded in 1819 by Mr John Hardie, of Falkirk, and associates. It was successfully carried on by them until 1849, when it was purchased by Mr R. W. Kennard. A later generation of the Kennard family are large shareholders, and take an active part in the management. These debentures are secured by trust deed as a first specific charge on the properties and fixed plant, and a floating charge on the remaining assets. Holders of these debentures have the option to convert into £1 ordinary shares at the price of 25s per share on any date up to and including September 30, 1930. Surplus assets, including the proceeds of this issue, are valued at £738,688, and goodwill, &c., have not been taken into account. Land, buildings, plant, &c., are valued separately at £376,986, and if all these are included in the trust deed, debenture-holders are well secured. Profits are shown from 1914, and from these it would appear that the money for interest on debentures can be found comfortably.

Hovis, Limited.—Authorised capital £550,000, divided into 150,000 6 per cent. preference shares of £1 each and 400,000 ordinary shares of £1 each. The whole of the preference shares and 150,000 ordinary shares have been issued. This is an issue of a further 100,000 ordinary shares at par. The company was formed in 1898 to purchase the milling business of S. Fitton and Son, together with the Hovis undertaking. We referred to this company in the *Economist* for October 16, 1920, when the company offered ordinary shares at par to shareholders. Neither past profits nor a statement of assets is given in the prospectus—a remarkable omission.

Rivoli Cinemas, Limited.—Authorised capital £200,000 divided into ordinary shares of £1 each, of which 150,000 are offered at par. The company has been formed for the purpose of acquiring from Messrs Moses Cohen, Isaac Lewis, and David Morris, the vendors, the partially constructed theatre adjoining St Mary's Underground Railway Station in the Whitechapel road, and of completing and carrying on the same as a high-class cinema theatre. The site and the value of the work completed has been independently valued at £92,217. The purchase price is £85,493, of which £35,500 is payable in cash, out of which the vendors will discharge incumbrances on the building to the amount of £25,333, money advanced and expended on construction. The balance of £49,993 will be satisfied by the allotment to the vendors of 49,993 shares of £1 each. The company will also pay the sum of £2,640 balance of unpaid purchase money for part of the freehold site purchased from the Governors of the London Hospital. The vendors have agreed to hold not less than 30,000 of the shares in the company allotted to them as part of the purchase price for a period of not less than three years. Optimistic estimates of profits are submitted, which may or may not prove correct. The issue is very speculative, and we do not recommend it.

The Santa Gertrudis Company, Limited.—Authorised capital £1,500,000, in shares of £1 each. This is an issue of £300,000 8 per cent. five-year notes at 98 per cent., repayable at £115 per cent. on or before September 30, 1925. The Santa Gertrudis Company, Limited, was registered on December 31, 1909, and throughout its 11 years' existence has through its Mexican subsidiary companies, operated with the Santa Gertrudis Mine in the Pachuca district of Mexico, having treated during that period 2,572,602 short tons of ore, containing 184,647 ozs gold, 34,259,517 ozs silver, resulting in an operating profit of £1,995,940. For the years ended June 30, 1918, 1919, and 1920, the net operating profits from the Santa Gertrudis Mine alone, after allowing for depreciation, were:—£213,407, £274,552, £361,600. The ordinary £1 shares are quoted at 19s 6d to 20s 6d, and substantial dividends have been distributed. The yield on these notes is over 11½ per cent. (allowing for profit on redemption, but without allowing for the immunity of that profit from income-tax). Investors should remember the motto, "the higher the interest the higher the risk."

Trinidad Esmeralda Estate, Limited.—Authorised capital £100,000, in shares of £1 each, of which 55,000 shares have been issued. We take the following information from an advertised statement. The company was incorporated on December 10, 1919, as a private company, with a capital of £55,000, divided into 55,000 shares of £1 each; of these 46,000 shares were issued for cash at par and 9,000 were allotted as part consideration for the property, "Esmeralda Estate." This estate produces cocoa, and it is stated that this industry will be continued. The property has been "favourably reported on" as to its value as an oil-producing estate by Mr J. R. Falconer. By an agreement dated December 16, 1919, made between Mr J. R. Falconer and this company, the company purchased the "Esmeralda Estate," the purchase price being £30,000, payable as to £21,000 in cash and the balance of £9,000 to be satisfied by the allotment to Mr Falconer of fully-paid shares to the amount of £9,000. The £21,000 cash has been paid, and shares to the amount of £9,000 have been allotted. The information offered is meagre.

Bristol Industries, Limited.—Capital £250,000, divided into 200,000 ordinary shares of £1 each and 50,000 8 per cent. cumulative preference shares of £1 each. There are now offered for subscription 51,982 ordinary shares and 17,188 cumulative preference shares at par. The company has been formed to acquire five local undertakings of various description. The purchase price is £215,830, of which £180,830 is payable in shares and £35,000 in cash. Profits are given for short trade boom periods only—an unsatisfactory method. Certain assets are valued at £238,734, of which freehold and leasehold buildings are independently valued at £167,017. As later on the prospectus states that "there is a margin in capital value of nearly £23,000, exclusive of goodwill, in the associated companies, which, though of considerable value, will not appear as an asset," it can only be assumed that these figures of assets are intended to be surplus assets. However, the point is important, and it is not clearly stated. The issues are mainly for consideration of local investors. The ordinary shares will not attract the outside speculator. The preference shares are well secured, always on the assumption that the figure of £238,734, referred to above, represents "surplus" assets. There are no promotion profits.

Provincial Cinematograph Theatres, Limited.—Authorised capital £3,200,000, of which £2,200,000 has been issued. This is an offer for sale of 175,000 7½ per cent. cumulative "B" preference shares of £1 each, fully paid, by the Equitable Trust Company of London, Limited, at 16s 6d per share. These form part of an issue of 600,000 "B" preference shares, which ranks immediately after £100,000 of "A" preference shares. We reviewed the position of this company in the *Economist* for June 28, 1919 (on page 1182). The official quotation for these "B" preference shares is round about 16s 6d, ex dividend. The company has enjoyed considerable prosperity since its inception, but investors should remember that the business of entertaining is very speculative, being dependent upon public taste, which is ever changing. It is not stated at what price the vendors acquired the shares now offered. The offer cannot be considered attractive.

The Aldershot Gas, Water and District Lighting Company (Incorporated 1866).—Issue of £50,000 7 per cent. redeemable mortgage bonds, issued at par, with "redemption at par on January 1, 1931." The net revenue for the year ended December 31, 1919, is stated in the advertised notice to have been £23,894. Interest on loan capital, including the present issue, requires £7,251, which leaves a substantial margin for ordinary and preference stock. The 4 per cent. consolidated preference stock is quoted in the official list at 56 to 61. It should be noticed that the company supplies water, gas, and electricity. While the rate offered is not attractive, the issue is well secured. But investors should consider the confined market for the stock in the event of disposal.

Adolph Frankau and Co., Limited.—In the *Economist* for November 6, 1920, on page 828, we refrained from recommending an issue of debentures by Adolph Frankau and Co., Limited, in the absence of further information. We are now informed that there is further provision to safeguard debenture-holders. This consists of a clause to the effect that if the company's liquid assets, defined as stock-in-trade, book debts, bills receivable, cash, and British Government investments, should ever become less than £200,000, the trustees may at any time demand repayment of the whole debenture debt. Of course, this information throws a fresh light on the position of these debentures, and in the circumstances we

can now recommend them to our readers as an investment, although the narrow market for so small an issue should not be overlooked.

Musico Club, Limited. — Authorised capital £21,000, divided into 2,000 ordinary shares of £10 each and 1,000 management shares of £1 each. The ordinary shares confer upon holders the right to 50 per cent. of profits. This is an issue of 2,000 ordinary shares at par. The company has been formed to produce musical comedies, and it is intended to branch out in several directions—such as organising weekly dances, &c. Subscribers for these shares are entitled to seats in the theatre where production takes place to the extent of £10 for each £10 share held. The favourable estimate of profits by chartered accountants is only one side of the picture. It is well known that theatrical enterprises are extremely speculative. The cautious investor will leave it alone.

Mappin and Webb.—We are officially informed that this issue has been oversubscribed.

BURMA CORPORATION.—Cable:—"Bawdwin Mines—Lead production for October, 3,311 tons gross, from 7,419 tons of lead-bearing material, including secondaries; refined lead production, 2,200 tons; refined silver production, approximately 246,260 ozs."

THE BROKEN HILL PROPRIETARY COMPANY.—Report for four weeks ending September 15, 1920:—Coke ovens: The production of this plant has been regulated to suit blast furnace requirements. The production for the period was as follows:—Coke, 22,510 tons; tar, 262,889 gallons; sulphate of ammonia, 294 tons. Blast furnace department: No. 1 furnace—The production from this furnace for the period totalled 10,481 tons of basic and foundry pig-iron. No. 2 furnace—A total quantity of 13,095 tons of basic iron was produced from this furnace. Foundry furnace—The foundry was blown in on August 24th, and produced up to the end of the period 152 tons of pig-iron and 391 tons of ferro manganese. Open hearth department: The production from this department has been regulated to supplies of hot metal from the blast furnace, and 21,110 tons of steel were produced. Blooming mill: The total production from this mill amounted to 20,485 tons, including a quantity of billets for the 18-in mill and plates for construction work. Rail mill: 9,369 tons of material were rolled at this mill, including 60 and 80 lb rails for Government orders and billets for the rod mill. Merchant mills: The production from the Merchant mills was as follows:—18-in mil, 8,885 tons; 12-in mill, 2,157 tons; 8-in mill, 923 tons. Rod mill: The production from this mill for the period was 4,403 tons. Steel Foundry: The output from this foundry for the period amounted to 351 tons of castings. Iron Knob: Shipments of ironstone from Hummock Hill to Newcastle during the period amounted to 33,202 tons. Melrose Quarry: 8,500 tons of limestone were shipped to Newcastle from this source. Taree: Shipments of limestone from this source for the period amounted to 1,268 tons. Broken Hill: All productive operations at the mine remained suspended, due to the industrial trouble. It was not found necessary to do any pumping of underground water during the period. 2,253 tons of zinc concentrates were despatched to Port Pirie. At the Potosi lease the diamond drill bored a further 144 ft, making the total depth of this borehole now 352 ft. Nothing of any value was passed through by the drill during the term. Owing to the very soft nature of the ground encountered, boring was suspended at 352 ft, and preparations are now being made to either ream the existing borehole or commence a new one from a different position. Nearly four inches of rain fell during the period, with the result that the company's reservoirs are now completely filled. Both the Stephens Creek and Umberumberka reservoirs also materially benefited by the downfall.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

COMPANY MEETINGS, &c.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED

SATISFACTORY RESULTS—PROSPECTS FOR CURRENT YEAR.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Co., Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London, the Right Hon. the Viscount St Davids, chairman of the company, presiding.

The assistant secretary having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that they had had a good year. The traffic receipts amounted to £8,200,000, against last year's figure of £6,269,000, an increase of £1,930,000. Against this the expenses were £5,712,000, against £4,483,000, an increase of £1,228,000. The net result was an increase in the working profit of £701,000. Interest and difference in exchange gave an increase of £715,000, of which £67,000 was the increased difference in exchange, and £38,000, the interest from the larger sums of money placed on deposit at the bank. The proportion of gross profits payable to the Argentine Transandine Company was £7,930 less than for the previous year. They had, therefore, a total additional amount of £1,396,000 to deal with.

WAGES, FUEL, AND STORES.

In spite of these results they had had most anxious times to go through—anxious because their expenses were simply prodigious compared with what they used to be, mainly under the three headings of wages, fuel, and stores. As regards fuel, before the war they used to burn mainly Welsh coal; now they were using, as far as they used coal at all, mainly American coal. On the Bahia Blanca line they were burning mostly wood, and on the Argentine Great Western mostly wood. On the Pacific they burnt wood and coal mixed, and the coal was an awful price. The truth was that railways were being worked under altogether different conditions to what they used to be worked under. In 1914 their coal delivered at Buenos Ayres was costing them £1 13s 2d per ton, whereas they had been burning coal lately which cost them £9 per ton. Freight on general goods before the war cost 13s 11d per ton, whereas now it was 59s 1d per ton. Pig-iron cost them before the war £3 14s 6d per ton, and now cost them £16 17s 6d per ton. Steal bars used to cost £7 15s, and were now £31 15s. Steel plates were £7, but now they were £36 per ton. Wire, of which they used an immense amount, used to be £9 5s, and was now £48. White lead used to be £26 per ton, and was now £65. Linseed oil was £29 5s per ton, and was now £91, while cotton waste, which used to be £29 10s per ton, was now £82. This would show the problem the directors had to deal with. To economise on fuel they were testing deposits of lignite, and were also joining in the exploitation of an oilfield.

In respect of the current year, it might be asked how they were going to fare as regarded exchange. Last year exchange helped them greatly, but this year he did not think they would benefit to anything like the same extent. It had been their custom, in common with all the other Argentine railways, to convert the cost of materials purchased in sterling into dollars at the par rate, but under a recent Government decree they had now to convert these purchases at the rate ruling at the time. The result was that whilst the rate of exchange was in favour of the Argentine, there was an adverse difference in the conversion of sterling into dollars, and the balance on exchange account at the end of the financial year would depend to a large extent on the amount of materials they might have to purchase for the requirements of the line. On the other hand, the profit on working would be benefited so far as revenue materials were concerned to the extent that materials were no longer charged at the par rate. Wages in the current year would be more, fuel would be more, and they would only have one crop to deal with, whereas last year they had two. There was, however, a large amount of wine to deal with, and the wine rent had been raised. It would certainly not be a very good year, probably not a very bad year, and personally he looked for a moderate year.

The Chairman announced that Mr J. A. Goudge, the managing director, was going out to the Argentine, and on his return shareholders would be invited to hear a report from him on his visit.

The report was unanimously adopted, and the usual formal business transacted.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

SATISFACTORY REPORT AND ACCOUNTS.

The twenty-third annual general meeting of the London Maritime Investment Company, Limited, was held, on the 10th inst., at Winchester House, Old Broad street, London, Sir Owen Philipps, G.C.M.G., M.P. (the chairman), presiding.

The secretary (Mr F. Vernon Thomson) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—This is our twenty-third annual meeting, and I am pleased again to have such a satisfactory report and accounts to place before you. In December, 1919, the subscribed capital of the company was increased to one million sterling, which is now fully paid up, and is divided into £500,000 preference stock and £500,000 ordinary stock. The respective stocks are now *pari passu*, and are all quoted officially upon the London Stock Exchange. As the company has no debentures, the preference stock, although paying only 5 per cent. interest, may be fairly described as a very sound and safe investment. The market price of the preference stock is, in my opinion, at present unduly low, and whenever rates of interest become more normal I feel certain it will appreciate very considerably in value. The London Maritime Investment Company, Limited (which has now been established for nearly a quarter of a century), is in a somewhat exceptional position, as it has always been the practice of the board from time to time to write down the book values of any securities that have depreciated.

COMPANY'S SOUND FINANCIAL POSITION.

Notwithstanding the fact that Shipping shares have nearly all fallen considerably in market value, I am pleased to be able to say, as indicating the company's sound and strong financial position, that a valuation, made on September 30th last, of the investments held by this company (including the reserve fund) showed that they were worth more than the figure at which they stand in the company's books. As you are aware, the company has paid steady dividends on its ordinary stock for many years. For the year ended September, 1919, we paid 7 per cent., and for the year ended September 30th last we recommend that the dividend on the ordinary stock be increased to 8 per cent., while at the same time adding no less than £10,000 to the reserve fund. We thought it desirable at once to deal with the question of the expenses in connection with the last issue of capital, and have therefore written this amount off the reserve fund. After adding to the reserve fund the profits realised on the sale of certain securities, and the £10,000 already referred to, the reserve fund now amounts to no less than £160,000, which is all invested separately and entirely in gilt-edged securities.

PROSPECTS OF KEEN COMPETITION.

British shipowners will almost certainly have to face keen competition during the next few years, as although German rivalry is for the moment practically non-existent there can be no doubt that German shipping interests intend to replace their lost fleets by the most up-to-date modern tonnage at the earliest possible opportunity. The first new German steamer has, I understand, actually been delivered, and a large number of others are being built. The competition of the mercantile fleets of other maritime nations, more especially Japan, Holland, and Scandinavia, is keener than before the war, while across the Atlantic some 1,200 vessels built by the United States of America Government, costing between five and six hundred millions sterling, which are still Government-owned, constitute an enormous addition to the world's tonnage, and are bound to cause disorganisation in many trades until they have found their ultimate rôle, which I hope will be as the property of American shipowners and American shipping companies, who will, no doubt, see that they are managed on sound business lines. I am pleased to see in the American Press that United States of America shipowners appear to be practically unanimous in urging this solution of a very difficult problem, which is one of the aftermaths of the great war. After this meeting we shall hold an extraordinary general meeting to increase the capital of the company. I shall be pleased to answer any questions. Meantime I beg to propose: "That the report and accounts for the year ended September 30, 1920, as submitted, be received and adopted, and that the dividend as therein recommended be declared and paid."

Mr George Dodd seconded the motion, which was carried unanimously, and resolutions were also passed re-electing the retiring director, Mr Arthur A. Baumann, and the auditors, Messrs Fookes, Hickman and Co., chartered accountants.

INCREASE OF CAPITAL APPROVED.

An extraordinary general meeting followed, at which resolutions were passed increasing the capital of the company to £2,000,000 by the creation of 1,000,000 shares of £1 each.

The Chairman stated that the directors did not propose at the present time to make any further issue.

The proceedings then terminated.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

SHAREHOLDERS' APPROVAL OF SCHEME.

OVERWHELMING MAJORITY.

Mr J. H. Batty (chairman of directors) presided over a meeting of the holders of the ordinary shares and also an extraordinary general meeting of the African and Eastern Trade Corporation, Limited, held on Friday, the 5th inst., at Liverpool.

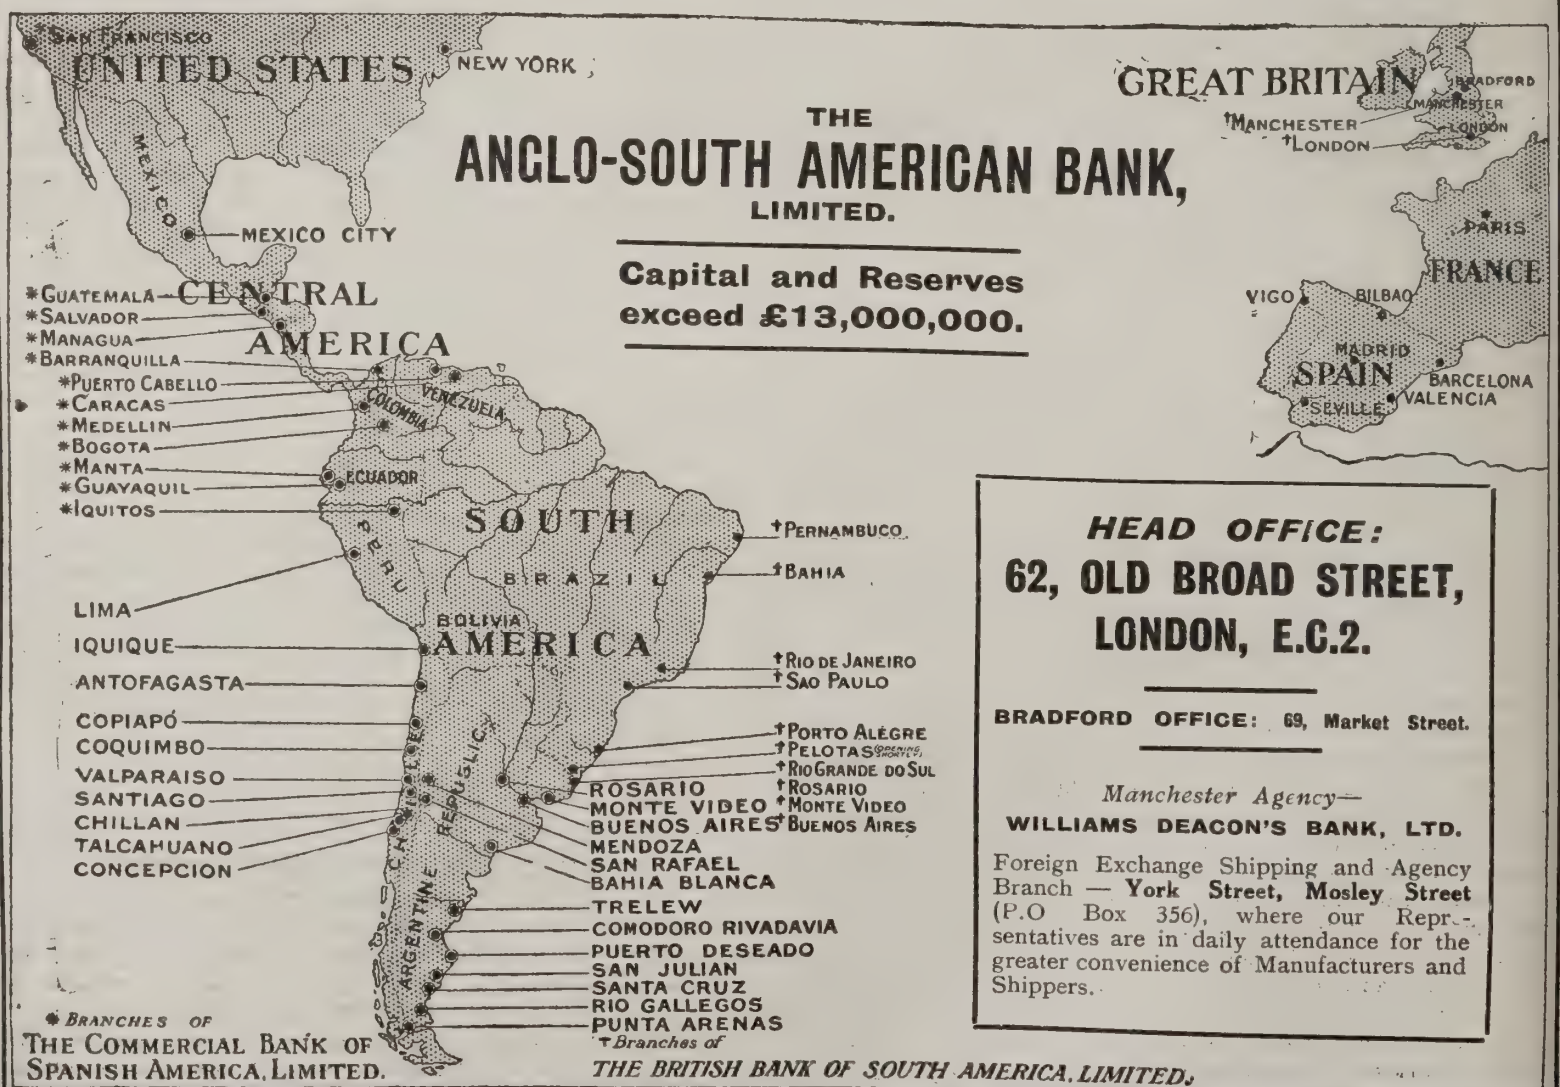
The secretary read the notice convening the meeting of ordinary shareholders, the resolutions and the schedule being taken as read.

The Chairman said at the outset that Mr Munro Miller had tendered his resignation as a director. Since Messrs Lever Bros. purchased the controlling interest in the Niger Company the directors felt that some understanding was desirable with them, and it was best to bargain when they had something to bargain with. Prices of chief products exported from West Africa had fallen rapidly, having a diminishing effect on the spending power of the natives, and until they had improved transport facilities for the opening up of new markets in West Africa trade would suffer accordingly. To withstand the effect of adverse trade it was necessary to be allied with their strongest competitors. If they were to wait until profits universally reached a lower level they could not then command such good terms.

ADVANTAGES OF THE FUSION.

The fusion would enable them to carry out many economies in conducting the business, and among other things their position would be protected and consolidated against foreign attack. It would ensure unification of management, and all the resources of those concerns would be pooled for the general benefit of the whole. In effect, they would be consolidating with their own and controlling the whole of Lever Bros.' West African interests, including the Niger Company, and this consolidation of British interests appealed very strongly to the directors as a prudent and protective measure. The scheme would bring into the coffers of the Corporation additional income of £800,000 per annum, free of E.P.D., being the 20 per cent. on the 4,000,000 "A" preferred ordinary shares of £1 each of Lever Bros. Should they approve of the scheme they could pay every year a dividend equal to 37½ per cent. on the ordinary capital. To provide for the 2½ 15 per cent. cumulative preferred ordinary shares which they would possess for one ordinary share now held they had taken from the reserve about £5,000,000 to enable them to create the number of shares required for this distribution. On each ordinary share now held and on each new preferred ordinary share resulting from the distribution of the reserves they would be secured out of the profits of the company (including the dividend on Lever Bros.' shares) a dividend of 15 per cent. per annum, and in addition would have the right to be repaid twice over before any payment was made on the ordinary shares of the company in the event of liquidation.

PROVISIONS FOR EXTRA CAPITAL.



Provision was being made for extra capital in future by reserving power to issue preference shares up to £8,500,000. Those shares could not be issued at over 8 per cent. or otherwise than for cash and for the Corporation's business without their being consulted. Special consideration to the preferred ordinary shareholders would be given if and when part or the whole was issued. The power reserved to issue preference shares had been inserted solely for the purpose of providing means whereby the Corporation would not be hampered for lack of working capital, and no such issue was at present in contemplation nor were there, so far as the directors were aware, any grounds for supposing that any of those shares would be issued in the near future. Concluding, he stated that the directors themselves were large shareholders, and consequently they felt the fullest sense of their responsibility.

Mr Robert Miller seconded the adoption of the resolution.

After some remarks by Mr R. T. Golding and Mr Terry, Alderman Fred. Smith, Mr Harvey C. Woodward, Mr G. D.

Killey spoke in support of the resolution, which was put to the meeting and carried by an overwhelming majority.

A poll was then taken, the result of which will be announced early next week.

The extraordinary general meeting which followed was of short duration, the seven resolutions being adopted by an overwhelming majority.

RESULT OF THE POLL OF SHAREHOLDERS.

It is now officially announced that the result of the poll which was taken on Friday, the 5th inst., regarding the fusion of interests with Messrs Lever Bros. shows that 2,727,529 votes have been recorded in favour of the scheme, which is 77.10 per cent. of the total issued ordinary shareholdings.

FREDERICK HOTELS, LIMITED.

RECORD GROSS PROFIT.

The twenty-second ordinary general meeting of shareholders of Frederick Hotels, Limited, was held, on the 10th inst., at the Hotel Russell, Russell square, London, Mr Ronald Peake (the chairman) presiding.

The Chairman said: I think the shareholders will be pleased with the accounts, and if we had been able to bring into the past year's accounts what we hope to receive from the Government in respect of the Hotel Great Central, I feel sure your directors would have been justified in recommending a satisfactory dividend. We might, of course, have postponed this meeting until our claim was settled, but after careful consideration your directors came to the conclusion that it would be better to hold the meeting now and to consider the question of payment of a dividend when the sum awarded has been received. The business for the past year at all the hotels of the company has been good, particularly so in London. In spite of the greatly increased costs of working and the high prices of commodities in the past year, the largely increased volume of business has resulted in a gross profit, excluding repairs and renewals, greater than in any previous year. The cost of the reinstatement of the Hotel Great Central had, however, to be charged against this year's gross profits, and as no credit can be taken for the sum we shall get from the Government until it is definitely settled, the results of the year's trading is reduced by the amount so expended in reinstatement.

As indicated in the report, we have during the past year overtaken the arrears of repairs and renewals, which it was not possible to do during the war years, and we have made a number of necessary improvements in the hotels, which all tend to the increased comfort of our visitors and to greater efficiency in working. In particular we have carried out a much needed improvement in the lounge at the Sackville Hotel, Bexhill-on-Sea. From expressions of opinion we have already heard from visitors there is no doubt that the outlay on these improvements will bring a good return in increased business, particularly during the winter months. The cost to June 30th of making the alterations has been charged in the past year's accounts, and the balance will be chargeable against the current year. I do not think there are any items in the balance-sheet which call for particular comment. Investments are increased by the purchase of £39,304 debenture stock of the company during the year, and there is an overdraft at the bank, but this is amply covered by the Exchequer bonds and National War bonds repayable in 1921 and 1923 respectively. From April 1st last the interest on the mortgage of the Hotel Russell has been increased from 4½ per cent. to 5½ per cent. per annum.

Sir John H. Bethell, Bart., M.P., seconded the resolution, which was carried.

BUKIT TAMBUN ESTATES, LIMITED.

FIRST DIVIDEND DECLARED.

The fifth annual general meeting of the Bukit Tambun Estates, Limited, was held, on the 11th instant, at 65 Bishopsgate, London, Sir Gordon B. Voules presiding.

The Chairman, in moving the adoption of the report, said that that was the first year in which they had been able to pay a dividend, and in view of the shortage in the crop, the shortage of labour, and also the shortage of food for their coolies, he thought shareholders would agree that the result reflected the very highest credit upon their manager. The net profit for the year amounted to £8,372, and adding the sum of £3,445, brought forward from the previous year, they arrived at a total of £11,817 with which they had to deal. The board proposed to pay a dividend at the rate of 8 per cent., which would absorb £8,400, to write the sum of £500 off administration and development account and to carry forward £2,821. They had harvested 1,660,633 nuts during the year. That was considerably short of the estimate, but their manager and the visiting agent agreed that the shortage was entirely due to adverse weather conditions, especially to the very severe drought which occurred at a critical period of the year. They had manufactured 323 tons of copra, of which 81 tons were shipped to London, the balance being sold locally. They had obtained for their copra an average price of £47 7s a ton, as compared with something over £30 a ton in the previous year. The great improvement was due to the increase in the local demand for that commodity. Making due allowance for increased freight, &c., they had obtained at Penang almost the same price as they could secure by bringing the copra to London.

The average cost of production for their copra was £17 13s a ton, and this figure would have been very sensibly diminished if they had secured a crop equal to their estimate. He regretted to say that the manager had not been able to get as much labour as he desired, but so far as the labour situation was concerned, he did not consider that any serious difficulty would arise as their estates were very popular and extremely healthy. During the course of the past year they had planted up an additional 70 acres of coconuts and rubber, which made their planted area at the present time under coconuts 1,857 acres, of which only 50 per cent., or a little over, was now in bearing. Reverting to the labour question, he would like to point out that they had been able to minimise their difficulties by the introduction of four motor-tractors, which were reported to be doing extremely satisfactory work. Attention was being given to the by-products of the coconut, and no doubt in future, when they secured suitable machinery and a larger labour force, they would be able to utilise the fibre and also the milk of the nuts

The report was unanimously adopted.

SUNGKAI-CHUMOR ESTATES, LIMITED.

INCREASED PROFITS.

The 14th ordinary general meeting of the Sungkai-Chumor Estates, Limited, was held, on the 12th instant, at 1-4 Great Tower street London, Mr Thomas Ritchie (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that a year ago the nominal capital was increased from £40,000 to £100,000, in order to capitalise reserves standing at approximately £50,000, bonus shares being issued at the rate of five for every four shares held—a point which should be borne in mind in considering the dividend for the past year. They also offered £10,000, or 100,000 shares, to the shareholders at par, and 98,546 were taken up, leaving 1,454 shares unissued. As the policy of the company was a progressive one and they had land available for development, the capital was afterwards increased to £200,000. The nominal capital now stood at that figure, and the issued capital at £99,854. After writing off £1,742 loss on realisation of War Loan and Funding Loan, the net profit for the year was £30,755, against £13,235 for the previous year. Adding the carry forward and refund of excess profits duty, but deducting the interim dividend paid in May, they now had £38,292, out of which it was proposed to pay a final dividend of 10 per cent., making 20 per cent. for the year, and after placing £6,500 to taxation reserve account there was a balance of £21,307 to carry forward, against £12,717 last year. The directors might have suggested a larger dividend, but at the present time it was necessary to err on the safe side in distributing profits. The crop for the year was 614,726 lbs, against an estimate of 600,000 lbs, and a production in the previous year of 413,463 lbs. The f.o.b. cost was 11.32d against 1s 1.93d, and the net price received 2s 0.17d against 1s 8.41d, leaving, after allowing for London expenses, a profit of 1s 0.22d against 5.73d. The average area in bearing was 1,506 acres, or about 63 acres more than last year. The average yield per acre was 408 lbs against 286 lbs, and per tree 4.80 lbs against 3.89 lbs. They sold forward for delivery out of the 1920-21 crop 115,360 lbs at an average price of 1s 11.96d per lb. The planted acreage remained at 1,934 acres, at a total cost of £47 13s 5d per acre. 142 acres of reserve land on Sungkai was being cleared, and they expected would be planted before the end of the year. A further 76 acres accidentally burned would a little later be planted, when they would have a total under rubber of 2,152 acres. The estimated crop for the current year was 665,000 lbs, but under the Rubber Growers' Association scheme of restriction this would be cut down by about 100,000 lbs. The crop for the four months to the end of October (subject to adjustment) was 211,730 lbs.

The report was unanimously adopted, and the usual formal business transacted.

THE ANGLO-SIAM CORPORATION, LIMITED.

COMPANY'S PROSPEROUS POSITION.

The twenty-third annual general meeting of the shareholders of the Anglo-Siam Corporation, Limited, was held on Tuesday, the 9th instant, at the registered offices of the corporation, 2 Fenchurch avenue, London, E.C., Mr J. M. Ryrie, the chairman, presiding.

In moving the adoption of the report and accounts for the year ended March 31, 1920, the Chairman referred to the trade outlook generally and the effect this is likely to have on the business of the

corporation, and mentioned that since the last general meeting a branch of the corporation had been opened in Singapore, whilst he expressed the hope that, as he looked forward with confidence to the future, no shareholders would be tempted to part with their shares.

LARGE DEVELOPMENTS FORESHADOWED.

In the course of his further remarks the Chairman foreshadowed some heavy expenditure on developments in the business, and said there has hardly ever been a time when it was more necessary to conserve cash and credit resources.

After paying a compliment to the staff in London and the East, to whose efforts he said the prosperity of the corporation was largely due, the Chairman dealt at length with a proposal by which the corporation would acquire the business of Messrs Arbuthnot, Ewart and Co., and that of their branches at Bombay and Karachi.

The directors' report and the accounts were adopted unanimously, and final dividends of 3½ per cent. on the preference shares and 12½ per cent. on the ordinary shares—both less income-tax—together with a bonus of 10 per cent. on the ordinary shares—free of income-tax—were declared, whilst out of the balance of £58,312 5s 1d carried forward, it was resolved to capitalise £25,200 by the distribution of 25,200 ordinary shares of £1 each, credited as fully paid.

AMALGAMATION WITH MESSRS ARBUTHNOT, EWART AND CO.

It was further unanimously resolved to give the directors power to carry through the proposed amalgamation with Messrs Arbuthnot, Ewart and Co. on such terms and conditions as they deemed desirable.

Mr R. J. Black, who retired by rotation, was re-elected a director of the corporation, whilst Messrs Turquand, Youngs and Co. were appointed auditors for the current year.

The meeting closed with a vote of thanks to the directors and staff, to which the Chairman responded on behalf of the directors and the London staff, whilst Mr Hendrick, the general manager in Siam, replied on behalf of the staff in the East.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4½% on Nov. 6, 1919, and 5½% on April 15, 1920, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

This shows the result of an attack upon a "cheap" safe, which does not offer resistance to the oxy-acetylene blowpipe. It will be observed that a large hole has been cut out of the side of the safe.

Before—or After the Burglary?

IF you are undecided whether to instal THE CHATWOOD SAFE *before* the burglary, or to "take a chance," you should bear in mind the fact that the burglar of to-day is far more scientific, more daring and more enterprising than his grandfather, "Bill Sikes."

The photo above strikingly depicts how easily the modern burglar—armed with the deadly oxy-acetylene blowpipe—can cut his way through a safe which does not afford protection against this up-to-date weapon.

In THE CHATWOOD SAFE the outer body is constructed of finest wrought steel, reinforced by an inner armour of "Intersected" Steel, which has proved itself (under numerous and extreme tests) to be absolutely impregnable to the oxy-acetylene blowpipe, and all other known methods of attack.

It is impossible to obtain a higher degree of protection against Fire, Fall, or Burglary than that provided by

Fire Proof Since 1858 **THE CHATWOOD SAFE** *Burglar Proof Since 1858*

	£		£
British South Africa	794,338	United States	2,678,038
West Africa	30,609	Bombay, via other ports	155,000
Total value of imports of gold	824,947	Total declared value of exports registered in the week	2,833,038

Messrs Samuel Montagu and Co. write on November 11th as follows :—"Gold : The Bank of England gold reserve against its note issue is £121,740,405, an increase of £61,985 as compared with last week. A moderate amount of gold came into the market this week, and was taken for the United States. It is reported from New York that $2,000,000 in gold has arrived there from Sweden. The following were the United Kingdom total gold imports and exports during the month of October, 1920 : imports, £4,877,584 ; exports, £23,997,741. Currency : In a former letter we mentioned that it was proposed in Germany to issue porcelain money. It is now reported that the pieces are considered too fragile, and it is not intended to put them into circulation. Silver : The market has maintained a steady front during the week, owing to poor supplies rather than intensity of demand. China seemed somewhat inclined to buy when the price dipped well below 54d, and silver bought 'two months' now falling due has been shipped to that country. The fact that most of the demand just now is for shipment has created a premium for prompt delivery. Yesterday a special order carried the quotations to 54⅝d and 54¾d respectively for cash and forward delivery, but the undertone of the market does not betray any improvement. To-day both prices have fallen ½d. The Federal Reserve Bulletin for October reports that Mexico furnished $3,252,000, or over two-thirds of the $4,723,000 of silver imported during the monthly period ended September 10th, most of the remainder coming from Canada, Peru, and Chile. Of the silver exports, amounting to $6,488,000, about two-thirds,

or $4,336,000, was consigned to China, and the remainder principally to Hongkong, England, Japan, Canada, and Mexico. It will be observed that if this rate were to be maintained throughout the year, the annual import from Mexico by the U.S.A. would be approximately between 40,000,000 and 50,000,000 ozs. The mining industry in the United States would hardly appear to be in a prosperous condition, from the figures returned as to Montana. During 1919 the production of gold, silver, copper, lead, and zinc was valued at $62,037,191, as compared with $121,405,569 in 1918. During the week ending October 30th, the Director of the Mint purchased 1,173,000 ounces of silver at $1 per ounce under the Pittman Law, a total to date of 20,864,231 ounces. Famine conditions of a more or less serious character are reported by the International Famine Relief Committee as prevailing in several provinces of China, namely, Chihli, Shantung, Honan, Shansi and Shensi, affecting a population of 58,000,000 people. The cost of relief until the spring harvest is estimated at $200,000,000, or £50,000,000. Such widespread distress might not unreasonably be expected to bear upon the prospects of silver, considering how important a factor is China in the produce markets. As a matter of fact, the export trade is already in a poor condition, partially owing to falling prices throughout the world. Merchants, however, have enjoyed great material prosperity during the war. Relief funds may reach only a fraction of the sum estimated as necessary. Some of the money may be expended in China itself, and to that extent would be equivalent to a silver purchase. But the larger portion will probably be devoted to purchasing suitable foodstuffs in Manchuria and Saigon. The currency of both these places now possesses a fixed relation to gold, hence exchange remittances to them would not be upon a silver basis. The stock in Shanghai on the 6th inst. consisted of about 37,400,000 ounces in sycee, 27,000,000 dollars, and 310 bars of silver, as compared with about 37,600,000 ounces in sycee, 27,000,000 dollars, and 840 bars of silver on the 30th ult. The Shanghai exchange is quoted at 5s 4d the tael."

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and corresponding periods in previous years are as below :—

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY report that the total production of crude oil by this company and the Rangoon Oil Company, Limited, amounted to 56,994 barrels for the month of October.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during October amounted to 107,573 barrels, or approximately 15,367 tons, including 54,891 barrels from the properties of the St Helens Petroleum Company, Limited. The above figures exclude the production from the McLeod lease, the output from which (approximately 27,000 barrels monthly) was formerly included in the returns.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined reduction for the week ending November 3, 1920, amounted to 1,680 tons.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

CHEMBONG MALAY RUBBER (in liquidation).—The liquidator proposes to make a first return of capital amounting to 10 per cent. (2.4d per share).

The Acme Tea Chest announce a dividend of 11.42 per cent. (including 3.295 per cent. in respect of the cumulative dividend of 6 per cent. per annum for the 201 days ended August 31, 1920), less tax, on the participating preference shares, making a total distribution of 16.42 per cent. for the thirteen months to August 31, 1920; 8⅛ per cent., less income-tax, on the ordinary shares, making a total distribution of 13⅛ per cent. for the thirteen months to August 31st last.

Reports and Notices.

Mr Marmaduke Granville Haymen has been appointed acting general manager of the Queensland National Bank, Limited in the place of the late Mr Walter Vardon Ralston.

The Council of Foreign Bondholders have received a telegram from their agent at Guayaquil stating that the Consuls of Ecuador in London and Barcelona have been authorised to pay Messrs Glyn, Mills, Currie and Co., £4,000 and 30,000 pesetas respectively.

Mr Charles Gordon Ferrier, O.B.E., has joined the board of directors of Ohlsson's Cape Breweries, Limited.

The directors of the Marine and General Mutual Life Assurance Society announce that Mr Arthur Nevile Lubbock has accepted the office of chairman in succession to Frederick Green, K.B.E., who has vacated his seat on the board.

GOVERNMENT STOCKS, &c.

COLOMBIA (CONSOLIDATED EXTERNAL DEBT).—The Council of Foreign Bondholders have received the November instalment of the debt service in respect of the half-year ending December 21, 1920.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the seventh fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1920.

MISCELLANEOUS.

INDO-CHINA STEAM NAVIGATION.—The report for 1919 states that, after providing for depreciation, all liabilities, outgoings, making provision for floating staff pension fund £100,000, transferring to underwriting account £40,000 and to building reserve £100,000, also allowing for interim dividend paid in April last of 3s on the preferred and 6s on the deferred shares, and taking into account £10,048 brought forward, there remains a balance of £139,510, from which it is proposed to pay the balance of dividend on the preferred shares—namely, 3s—and a final dividend of £2 10s on the deferred shares, and to carry forward £8,099.

SOUTH DURHAM STEEL AND IRON.—The directors announce that as the company's liabilities under the Finance and Munitions of War Acts have not yet been ascertained, the accounts for the year ended September 30, 1920, will not be ready in time for presentation at the meeting. They are, however, satisfied that the profits will admit of the payment of a final dividend of 15 per cent., less tax, making 25 per cent. for the year ended June 30, 1920. The profit for the year ended September 30, 1919, after making provision for taxation, amounts to £308,710, which with the balance brought forward, £37,270, makes a total of £345,981. Interest on the debenture stock to September 30, 1919, absorbed £13,500; dividend on preference shares, paid to June 30, 1919, £13,500; and interim dividend of 2s per share on 350,000 ordinary shares, paid April 30, 1919, £35,000; leaving a balance of £283,981, which the directors recommend should be appropriated as follows: In meeting the final dividend of 2s per share to September 30, 1919, on 350,000 ordinary shares, paid November 26, 1919, making 20 per cent. for the year, £35,000; provision for dividend on 6 per cent. cumulative preference shares, accrued to September 30, 1919, £4,500; depreciation, £50,000; reserve for deferred renewals and repairs, £150,000; leaving to be carried forward £44,481.

WALL PAPER MANUFACTURERS.—The accounts for the year ended August 31, 1920, show a profit, after providing for excess profits duty and corporation profits tax of £751,887. After payment of debenture interest and preference dividend, the directors recommend a dividend of 6 per cent. on the ordinary shares, making 10 per cent. for the year, a dividend of 10 per cent. and a bonus of 2½ per cent. on the deferred shares, transferring to contingency fund £65,000, leaving to be carried forward £181,054.

WARING AND GILLOW.—The report for year ended January 31, 1920, states that the profit on trading account, including interest, dividend, and transfer fees, after allowing for depreciation, bad and doubtful debts, amounts to £202,738, which, after charging amortisation of leases, directors' and auditors' fees, and trustees' remuneration, leaves a balance of £194,992. Interest on debentures took £22,689, and sinking fund for redemption of debentures took £7,311, leaving £164,992. To this figure is added £942,048 brought forward from previous year, making £1,107,041. Out of this dividend on preference shares for year to January 31, 1920, is paid, absorbing £45,000, thus leaving £1,062,041 to carry forward, subject to excess profits duty and corporation profits tax. The balance-sheet is analysed in our usual column.

WEARDALE STEEL, COAL, AND COKE.—The report to September 30, 1920, states that the profit for the year, after providing for all accrued liabilities, is £228,506. This sum, together with £45,203 brought forward, makes a total amount of £273,709, which the directors recommend should be disposed of as follows: Interest on four per cent. debenture stock, £11,527; dividend of 6 per cent. per annum on preferred ordinary shares, £30,000; dividend of 6 per cent. per annum on deferred ordinary shares, £13,500; further distribution, on the preferred ordinary shares, being 6 per cent., £30,000; on the deferred ordinary shares, being 13⅛ per cent., £30,000; reserve account, £100,000; carry forward, £58,682.

* Half-year. † Free of tax.

(a) Including arrears. (t) Represents a dividend of 10 per cent. on 5 per cent. cum. pref. shares.

RUBBER, &c.

TANJONG MALIM RUBBER. — The report for the year ended June 30, 1920, states that the profit, after providing £25,000 for taxes, amounts to £62,642, which with £4,550 brought forward makes £67,192. The directors recommend a dividend of 10 per cent. net (equivalent to £14 5s 9d per cent., less tax at 6s in the £), leaving £17,204 to be carried forward. The yield was 1,817,374 lbs, being 340,715 lbs in excess of previous year. but 52,626 lbs short of estimate. The combined average gross price for whole of crop was 2s 2.77d per lb ; f.o.b. cost, 1s 1.56d, against 1s 2.70d ; all in, 1s 3.77d, against 1s 4.32d. The yield for the current year was estimated at 1,680,000 lbs, but owing to the new scheme of restriction the actual crop may be expected not to exceed 1,350,000 lbs.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Good progress continues with outdoor farm work under favourable weather conditions, sowings being well advanced in Southern and Eastern districts, and where above ground the young plant presents a strong and health appearance. Of the recent harvest, crops generally showed moderate condition, though wheat appears to have been secured rather better than other cereals. Farmers are now able to devote more time to threshings, consequently fair quantities of native wheat offer at the principal distributing centres, and all good milling samples realise the maximum price of 95s per quarter 504 lbs on rail, or 1s per quarter more delivered up. Damp and ill-conditioned lots, however, were difficult to vend, and tend easier. Imported descriptions generally quiet of sale, and no change occurred in official quotations. There is a steady demand for English G.R. flour at 86s per sack ex mill, but imported makes meet with quiet support, and prices vary from 81s 9d to 93s, according to quality, per 280 lbs. ex store. Crop reports from Australia and Argentina remain satisfactory, and there is little doubt that actual and prospective supplies of wheat are adequate to meet all demands that can be foreseen at present. Barley trade dull, and prices tend easier for all descriptions except best samples of native malting, which maintain their value. Useful to bold types move off at 93s to 105s, choice 110s to 115s, with occasionally rather more for stand out parcels. Of imported, Californian ex ship quoted 92s to 103s, Morocco 80s landed per 448 lbs. American malting 69s, No. 4 Canada Western ex ship 65s, American feed ex ship 61s, Canada feed landed 68s 6d, Plate ex ship 68s, landed 70s per 400 lbs. On c.i.f. terms, No. 4 Canada Western, October-November, sold 63s 6d, and No. 3 ditto to outport at 68s 6d and 68s 3d per 400 lbs. Oats dull and values weak. English new whites 58s to 63s, grey winters 52s to 56s, black winter 52s to 55s per 336 lbs. Imported neglected Plate quoted 49s 6d. American white clipped 50s, No. 3 Canada Western 53s 6d, landed, per 320 lbs. Only minor transactions occurred on c.i.f. terms, including Plate f.a.q., January-February, at 42s to 41s per 320 lbs. Maize inactive, and rates easy in sympathy with reduced forward offers. Plate ex ship quoted 60s, and landed 62s 6d per 480 lbs. On c.i.f. terms trading continues restricted and price movements somewhat erratic, though values on balance show a further decline, with sales of Plate, October-November, at 58s to 55s 6d, November-December 58s 6d to 55s 6d, December-January 59s to 55s 9d. A cargo of Plate expected loading changed hands at 61s per 480 lbs. English beans dull, and tendency again easier, winters quoted 77s 6d to 82s, and springs 85s to 100 per 532 lbs. Peas inactive. English Dunns 82s to 85s. Maples 85s to 105s per 504 lbs, Japanese

new 31s cwt. Lentils steady, No. 1 split 46s, No. 2 42s per 100 lbs. Oatmeal slow and trend of values weaker. Homeward freight markets generally dull, and with tonnage offers plentiful in all directions, rates are lower. From the River Plate 67s 6d was paid for a steamer Buenos Ayres/La Plata to United Kingdom/Continent maize, December 1st-15th, and 90s clipped. Oats Bahia-Blanca, home, November-December, white 90s per ton is quoted for new season's loading. North America largely nominal at 12s 6d per quarter, Antwerp/Rotterdam, and 14s Mediterranean, with Gulf loading worth about 1s per quarter more money in each case. Eastern markets closed weaker on freer tonnage offers, and Karachi paid 70s scale basis, November-December. Australia shows a reduction in rates of 10s per ton for new season's wheat, steamers being fixed from 145s to 135s, January-March, to United Kingdom, with options. Dalny wheat and/or flour nominal at 115s, shipments being practically finished. Danube quiet and without new feature, the season being almost at an end.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—The major part of local industry was able to resume normal working conditions this week, and the remainder will be in full swing next week. The steel trade is good only in a few sections, and is suffering generally from the competition of low-priced Belgian material. One effect of this competition is seen in the reduction of a number of British quotations. Soft basic wire rods were reduced £5 a couple of months ago, and have now been lowered a further 50s., the quotation being £27 10s. The association minimum for soft basic billets is withdrawn, leaving a free market for such material. The old figure was £23, but Belgian steel has been offered as low as £15, delivered to British ports. In consequence of the absence of competition in acid steel, the association minima for such material remain as before. Bright drawn steel and iron and steel hoops are down about £5. Easier figures are now being quoted for the commoner steels in various forms of manufacture and wire. The iron and steel section shows up well in the returns of overseas trade for October, with the exception of rails and pig-iron. The total tonnage exceeds the previous month, and would probably have approximated the pre-war level were the Russian and German markets in a position to buy British steel products. Sheffield is exceedingly busy in saws and tools used in agriculture, building, carpentry, and various crafts. Output is far below demand, and makers are rationing their customers. German razors and scissors are in evidence in the British market, and Sheffield cannot compete with the goods in the matter of price. The trade is very busy, however, in the table and artisans' knife department, and stainless cutlery is going strong. Collieries are greatly pressed for deliveries, and are delivering as equitably as possible. House coal is not particularly active. Current prices of coal per ton at pits are: Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; best Tyne steam, 37s 3d home and 155s export; steam nuts, 31s 2d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; branch, 37s 2d to 37s 8d; best silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—The various iron and steel works—from the raw to the finishing—are making a more rapid recovery from the state of stagnation in which they were involved for some weeks through the coal strike than was anticipated. Demand for all brands of Scotch iron is very active, consumers being quite out of stocks, so that prices are exceedingly firm, with no prospect of an immediate reduction, though buyers are operating for some concession about the turn of the year. It is said that certain consumers, not so sanguine as others, have covered their ordinary requirements for the first three months of 1921 at current rates, which, while still high, are substantially below the boom quotations of a year since. If supplies were more abundant, a good trade could easily be done in Scotch No. 1, which is bid for from South American, Pacific, colonial, and Mediterranean markets. The all-round figure at which business is going through is 310s per ton, alongside port of lading, generally Glasgow. In the manufacturing branches there has been quite a stir this week, through the steel works having succeeded in rolling off a respectable quantity of plates and bars. The need for plates is very great, which reflects the animated state of conditions obtaining in shipbuilding and engineering circles. The shipyards are said to have still heavy order books before them; and steelmakers declare that in that relation alone they have an outlet for all suitable material which they can produce. Boiler plates are called £3 10s; ship plates, £27; angles, £26 10s for sizes of 7 united inches, and £31 under 7 inches; extras according to list. Steel bars, from £31 to £33 10s per ton, delivered in Glasgow area, with common malleable iron bars £30 per ton net, f.o.t. works; best quality malleable, £31. The larger houses in the iron and steel trades describe the general industrial position as favourable—for a time ahead—provided that the coal trade peace is consolidated. Scotch colliers have been working energetically since last Thursday, and supplies are of such an improved character that arrangements are in progress for resuming export shipments, for which 120s a ton and over is named in connection with first-class qualities.

Our Middlesbro' correspondent's report, dated November 11th, 1920, is as follows:—Pig-iron: The output of pig-iron is being gradually resumed after the coal strike. Foundry iron, which has always been scarce, is no longer obtainable, and it will be a week or two before any supplies are available. On the other hand, the disorganisation of the strike has produced a more plentiful supply of the lower grades, such as forge, mottled, and white. Prices are unchanged at 225s per ton for No. 3 and No. 4 foundry pig-iron, and 260s per ton for mixed numbers East Coast hematite, for home consumption. Manufactured iron and steel: Steel works will be going fully again next week. Engineering works and shipyards are very much in need of supplies of steel. Prices are as follows:—Steel ship plates, home, £24 10s; steel ship angles, home, £24; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £25 net. Iron ore: As ore deliveries continued during the recent strike stoppage, works have been able to accumulate fair stocks of ore, and consequently business for prompt delivery is very slow. The price of best Rubio on a 17s freight basis is maintained nominally at 50s per ton. Forward business is quiet.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

The outlook in the Cumberland and North Lancashire hematite pig-iron trade is obscure. All that is certain is that makers have sufficient orders on their books to ensure for the remainder of the year as full a production as they can secure, but no forward business of any important extent is being booked, and users, as yet, are content with the execution of their immediate requirements. Had no strike occurred, it is more than probable makers by now would have been in possession of contracts which would have enabled them to look forward to a busy three months in the early part of next year. So far no such prospect can be said to be theirs. The next four weeks will be critical for the hematite pig-iron trade, but, of course, if the country settles down in real earnest to work there may be such developments as will necessitate operations on the same scale as has obtained for the greater part of the year. At the present moment more iron is being offered than is being bought, though there is no decline in prices, Bessemer mixed numbers being quoted still at £14 10s per ton at works. This is true also of ferro, American demand having slowed down somewhat. Of the 27 furnaces which were in full blast at the end of September only 14 are now in draught—11 in Cumberland and three in North Lancashire—but nine more furnaces are expected to be put into draught next week. The steelworks of Workington and Barrow are still idle, and it may be another week before they are re-started. The volume of work awaiting them is not large enough to necessitate the employment of the whole of the plant, and, indeed, in the present condition of the steel trade it is doubtful whether there will not be a further diminution of activity during the winter. Rail orders are scarce, and the demand for tube and strip steel is smaller. Railway material will be the largest production, and even rail orders, in face of the American and Belgian competition, are slackening off. There has been only a partial resumption of operations in the iron ore industry. The needs of local smelters, however, are sufficiently big to absorb all the ore that can be mined, and the pits will all be working

J. B. Donnelly, D.S.O., *Manager*.

next week. No ore can be spared for Scotland or for the East Coast. There is a substantial importation of Spanish ores at the local ports. There is an overwhelming demand for coal, and Irish requirements alone are greatly in excess of the production. Not more than 7,000 or 8,000 tons can be allocated to Ireland, whereas 21,000 tons could easily be taken. Industrial and land-sale needs are also very brisk, especially now that the works here are no longer taking any Northumberland or Durham coal. Coke will not be a full production for another week or two, and unless the whole of the 27 furnaces are in blast there is bound to be a glut. There is some chance, however, that licences for the export of the surplus to the Continent may be granted. Belgium and France, it is reported, can take all the coke that is at command, and in that case coke-makers may be able to resume the remunerative trade which they enjoyed for a short time in the summer. By-products are nearly all in eager demand, and the make of benzol and sulphate of ammonia is insufficient to meet needs. Creosote is also being disposed of fairly quickly. The chemical industry is busier. The scrap-iron trade is dull. Heavy steel scrap is not wanted by the steelworks. Cast-iron scrap is going to Scotland at old prices, and so is wrought-iron scrap to the East Coast.

THE COTTON TRADE.

MANCHESTER, November 11.

The rather better feeling in the market has been maintained, but there has not been any general flow of orders, and business has been very patchy. The attitude of buyers has been affected by the irregularities and weakness in raw cotton prices. A large inquiry has again come through in cloth for India, especially for Calcutta, and although most of the trade has been in light fabrics, rather more transactions have been arranged in grey shirtings. Manufacturers in Blackburn and district are now rather more favourably situated, but there is still plenty of room for improvement. There has been an absence of practicable bids for China. Scattered sales for the minor outlets East and West have totalled to moderate dimensions, but there has not been any active buying. Producers of printing cloths cannot obtain relief. Home trade buyers remain nervous as to the future level of values. American yarns have moved off quietly from day to day, and prices, especially in mule descriptions, have been easier in sympathy with the decline in the raw material. A few more offers have been mentioned in bundle yarns for India. Egyptian spinnings have been generally slow, but some special orders have been booked in qualities suitable for thread manufacturing.

(I.) Comparative Statement of the Cotton Trade.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The poor demand for wool at the London sales this week has been very disappointing from the point of view of those who were looking to Coleman Street to give the trade a lead. In some quarters it was thought that good combing merinos would be maintained at the last series' level, even if they did not advance, so that an all-round decline in price, combined with very heavy withdrawals, has had a depressing effect on this centre. The fact remains, however, that neither in this country nor in the primary markets can wool be bought to make tops at the prices now current in Bradford, and as there is an entire absence of forward buying the trade is practically at a standstill. Quotations for both tops and yarns are purely nominal. There is practically no new business in the piece trade, and stocks in the hands of manufacturers and merchants are exceptionally heavy. In most sections of the trade unemployment is increasing, and many firms are unable to run their machinery more than 24 hours a week.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Another series of sales opened in London last Tuesday. The attendance was unusually large, including some buyers from Boston, American interests apparently being fairly well represented. This is taken as an augury for an improvement in trade in the near future, the way that America is buying in Australia also being taken as similar evidence. In face of the opinions expressed by leading members of the trade, who up to last Monday frankly stated that they expected good combing merinos to remain firm, and possibly become a little dearer, the opening results were disappointing. Even the best wools declined 10 per cent., medium merinos 15 per cent., while faulty carbonising wools depreciated fully 20 per cent. It was certainly expected that the best classes would maintain their ground, but apparently values have moved to a level which is in harmony with the decline which has taken place during the interval in consuming centres. It is now quite apparent that everyone is seeking a lower level of values, and upon that basis future trade may be expected to be done. The depreciation in the value of the mark and the franc is no doubt exercising a seriously adverse influence, French buyers feeling it to be imperative that what is lost on the exchange must as far as possible be recovered in the initial cost of their purchases. Crossbreds also declined 20 per cent. It seems useless to try to explain the decline which has taken place in values. The inquiry on home trade account has certainly shown some expansion, whilst there is also evidence of Continental and American interest, the rate of exchange being greatly in favour of purchases by the latter country. Though it is difficult to estimate the true position, it may be said that, on the whole, the outlook is a little better. After the sensational collapse in values compared with last March, the decline often being 60 per cent., prices for everything should now be well within the limit of trade operations. Whereas 64's tops were selling at 14s last March, the price to-day is about 5s 6d. This should encourage competition, and there are signs that the trade is seeking

THE BANK OF TAIWAN, LIMITED.

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

to do business on this lower level. Of course, the incubus of high-priced piece goods, deliveries of which are still to be made for the current winter and next spring season, is still felt. The liquidation of these high-priced goods and the readjustment of the clothing end of the trade is necessary before a real revival in business can take place. Still, both on home and export account there are signs of improvement. It is contended that the safest plan is to buy now and to average dear stocks, but the question of finance is still very difficult in the majority of cases, and little more than a hand-to-mouth business may be expected for some time until present dear stocks are liquidated.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Conditions in the markets for oilseeds and vegetable oils are far from stable—a state of great weakness would perhaps best describe the position during the past few days. The hope that as a sequel to the miners' strike settlement an improvement would come about is apparently to be slow to mature. The depression in industry generally, the slowness of the process of readjustment, and the chaotic condition of foreign exchanges and European industry are all factors operating against the recovery of trade on a sound basis.

Linseed oil has lost all the advantage gained after the recent set-back, when values touched the lowest level since the removal of Government control, and it seems far from certain that the end of the present easiness is in sight. The realisation of October oil has been a dead weight on the market, and this, coupled with the total absence of a consumptive demand, has had the usual effect. Cotton oils have also been subject to depression, and values have depreciated since the beginning of the week. Rape oil is somewhat firmer and dearer on reports of scarcity of seed, but most other vegetable oils are more or less inactive, and prices largely nominal.

Among oilseeds linseed has materially cheapened, being about 30s per ton less on the week in all positions. Stocks in hand are small, but with fair quantities on passage there appears sufficient to meet all requirements, and buying in consequence is very restricted. Cottonseed is also lower, good supplies in hand and afloat being assured. Soya beans are a slow trade, and shippers' quotations much above buyers' ideas. Rapeseed alone is firm. The crushing mills are still working short time, and in view of the small demand for the oil and cake products are likely to continue so yet awhile.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is still dropping, and at Thursday's Bermondsey sales best ox made 8⅛d-9½d, a reduction of ⅞d-1¼d as against last week! Horse hides made 19s-41s, a reduction of 2s. Calf were also weaker; heavies made 12⅞d, a slight advance, but the lighter classes made 12¼d-15¼d, a drop of ¼d-1⅞d! Wools were unchanged, but hoggs dropped a shilling in the best class, which made 11s 6d each. In foreign hides values are declining, and domestic tanners will only buy bargain lots! Dealers are asking for business, and there is no likelihood of stability whilst this state of affairs lasts. The American market is weaker, and best packers are now offered at 21 cents.

There is very little doing in sole leather, and prices are very chaotic. Merchants are not operating in view of the uncertainty which prevails, and are only buying sufficient quantities to fill actual orders in hand. Speculation is *non est* in view of the exchange difficulties, which preclude Continental trading Bends are now offering at anything from 2s 6d to 4s per lb, according to tannage.

Upper leather is only selling in small parcels, as short time at both tanneries and shoe factories is general. Stocks are getting heavy, although there is a great reduction in input. Yorkshire curriers are finding things a little better, and one large currier in Leeds has, I hear, resumed full time. Imports of upper leather continue on a large scale, the value for the first 10 months of the year being £11,162,121, of which Germany is responsible for approximately a million pounds' worth.

Shoe manufacturers are still slack, and only a few are working on cheaper boots to meat market conditions. Sales are frequent, and in some cases money is being lost, although there is a good deal of spurious advertising going on in connection with the boot trade at the present time.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 12.

Proceedings in the chief markets during the week were rather featureless, and demand on export account proved quiet, while adversely affected by rates of exchange on the chief near Continental countries.

SUGAR.—There was only a limited inquiry for free parcels, but prices remained steady. Transactions include crystallised West India, 78s to 83s; American and Canadian granulated, 95s; white Mauritius, 94s; and West India muscovado, 60s to 65s. American syrup very quiet, and useful dark, sold, 30s; with good mid grocery, 35s.

COFFEE.—Spot market remained in a generally quiet state, and moderate supplies in auction were only partially disposed, but desirable grades maintained a steady level. Future delivery market slow all round.

COCOA.—Business was again kept down, but no material change occurred in prices.

TEA.—During the week 42,300 packages Indian and 23,000 packages Ceylon were submitted to auction, and with more active and well-distributed competition prices ruled firm, especially in the case of really fine grades. Some special invoices cleared at extreme rates.

RICE.—Market very quiet at previous rates with actual business quite retail in extent. Rangoon bran, also beans and peas, sold slowly.

SPICE.—Pepper market dull, and small sales both spot and forward at easy rates. Fair black Singapore, spot, sold, 5½d; November-January, 5½d, 5¾d. Aleppy, spot, 6¾d. Tellicherry, 7d. White Singapore, 1s 1¾d. Muntok, d tto, 1s 2d; ditto, November-January, 10⅝d. Zanzibar cloves, spot, sold, 1s 5d. Pimento, sellers, 3⅜d. Flake tapioca, fair quality, spot, sold, 2d; ditto, November-January, 20s. Fair Panang seed pearl, spot, sold, 24s. Small sago, November-January at 30s. Sago flour, October-December, 20s 3d; November-January, 20s 6d. Japanese farina, October-December, 26s. Desiccated coconut, fine cut, spot, 79s; medium, 82s.

JUTE.—General quietness again pervaded this market, and the small business arising at the moment is restricted to near continental requirements. Tendency of prices ruled weaker, though sellers were not pressing. Native firsts, assortment, new crop, November-December, sold, £49, subs at £46 to £45 10s. Daisee No. 2, actuals, quoted, £43 10s; lightning actuals, £36, and subs £34. Hessians and also twills idle, and quotations purely nominal.

HEMP.—A dull and easier tone predominated respecting Manila parcels. J grade, October-December, sold, £64 to £63 10s; November-January, £64 to £63 10s; December-February, £63 10s. New Zealand dull. Points, October-December, sellers, £53 10s; fair, £52. Italian nominal.

SHELLAC.—Market very quiet, and small spot sales were on the basis of 60os for standard free T.N. Off standard, sold, 58os; December, 525s, 520s; March, 470s.

COPRA.—Market unsettled, and trade proceeded quietly during the week. F.M S. Straits, November-January, London, sold, £56 to £53 5s; ditto, to Rotterdam, £56 10s to £54 15s. Ceylon, November-January, London, £54 10s. Palm kernels, November-January, sold, £37 to £37 10s and £34 15s.

FRUIT.—The market for currants is steady, and trade proceeded with more activity during the week. Pyrgos, sold, 79s; Patras, 86s to 88s; Vostizza, 100s to 105s. Half boxes of Valencia raisins, sold, 127s to 128s; ditto, afloat, f.a.q., 128s. Smyrna sultanas, spot, 136s to 156s. Figs steady, layers, 148s to 154s; and pulled, 200s to 215s. Dates slow.

MENTHOL.—Spot, sold, 28s 6d to 29s, as to quality. Japanese peppermint oil, spot, sold, 6s 4½d, 6s 3d; aniseed, 3s 9d, 3s 7½d; slab camphor, 5s 9d to 5s 6d; and Chinese crude, spot, 2s 10½d, all per lb. Japan wax, spot, 115s per cwt.

EGG PRODUCTS.—Market very dull this week, and quotations in a great measure nominal. Liquid yolk, spot, old season's, sold, 80s; new, 100s; November-January, 90s; December-February, 92s 6d; liquid whole, spot, 80s per cwt. Dried yolk, spot, 8s; native dried whole egg, spot, 9d; spray, 1s 4d; albumen, spot, 4s 7d; ditto, to arrive, 4s 3d.

RUBBER.—Market very unsettled, and trade very quiet. Plantation crepe, spot, sold, 1s 1⅛d to 1s 1d, and 1s 1⅛d; December, 1s 1⅛d; January-March, 1s 2⅛d to 1s 2⅜d; April-June, 1s 4¼d. Smoked ribbed sheet, spot, sold, 1s to 1s 0⅛d; January-March, 1s 1¼d; April June, 1s 2⅛d. Fine hard Para, spot, 1s 5¼d.

OILS.—Linseed easier. Spot, net, naked, 61s; November December, 59s 6d. Rape quiet. Crude, spot, 74s; refined barrels, 85s. Cotton easier. Crude Egyptian, 55s; Bombay, 48s; refined edible, 78s. China wood firm. Hankow, spot (barrels), 110s; and Hong Kong, spot, 107s. Palm kernel quiet. Crushed, spot, 80s; extracted, 79s. Coconut quiet. Ceylon, spot, 92s; September-November, 90s; Cochin, ditto, 92s 6d. Soya quiet. Oriental, afloat, 62s; October-December, 62s; deodorised, 91s. Japan fish quiet. November-December (cases), 40s. Cod liver steady. English, spot, 45s. Groundnut quieter. English crushed, naked, spot, 80s; deodorised (barrels), 100s. Turpentine easier. American, spot, 115s; November-December, 115s; January-April, 115s. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum steady. American, spot, 2s 3¼d; and water white, 2s 4¼d per gallon.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

OILSEEDS.—Linseed: market easier. Calcutta, afloat, nominally £35; November-December, £34 10s. Bombay, October-November, £35 5s. Plate, afloat, Hull, £28 10s; November-December, £28 5s; January-February, new crop, sold, £29 10s to £28 10s. Rapeseed quiet. Toria, November-December, sellers, £34; real bold Ferozepore, £33; brown Cawnpore, £31. Cottonseed quiet, London. Egyptian, f.a.q., spot, London, £18; November-December, £17 10s. Bombay, spot, Hull, £12; November-December, £12. Gingelly easier. Chinese, November-January, to Continent, sold, £42 10s. Groundnuts quiet. Coromandel, November-December, £34 10s ton.

METALS.—Tin, on free selling continued to decline until the middle of the week, cash being registered at £247 10s, while since moving at £244 10s, three months at £251 to £247 10s and £250. Thursday's market tended firmer on active buying, cash being done at £240 to £244; late January, £247 to £248 10s; three months from £247 to £249 10s. At Friday's session the tendency was firmer, and a good business done. End of December sold, at £248 10s to £249; three months at £250 to £249, and since at £249 15s. English ingots, £241 to £242. Copper: The standard market tended rather lower last Monday while steady at the decline, cash selling at £90 10s; three months, £89 to £89 5s. Tuesday's movements manifested an improvement, business being limited. December date sold at £90 10s and three months £89 5s to £89 10s. An inactive and easier tone prevailed on Wednesday, while the downward movement made further progress at Thursday's market, a good business being done in cash at £88 10s to £88, early January £88, three months £89 to £87, and since at £87 5s. At Friday's session values were rather lower, dealings being sustained. End of month changed hands at £87 15s to £87 10s, and three months at £87 5s to £87. Electros, £99 to £100; best selected, £98 10 to £99; strong sheets, £152. Lead easier at £34 15s to £33 17s 6d. Spelter weaker at £36 to £37 7s 6d. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £99 to £101.

THE CORPORATION PROFITS TAX

BY

RAYMOND W. NEEDHAM

Sometime an Accounting Officer under H.M. Treasury; and of the Middle Temple, Barrister-at-Law.

Cloth. Crown 8vo. ***7/6 net.***

The Corporation Profits Tax is imposed on the profits of all limited liability companies; and it is manifestly of the utmost importance for the secretaries and other responsible officials of such companies, and for solicitors, accountants and auditors, to obtain at the outset the clearest possible insight into the precise meaning and effect of the various provisions. In this way and in this way alone can they ensure "getting started right."

Obtainable at all booksellers or from the publishers. Post Free 7/10.

Send to the Publishers for Prospectus.
LEONARD PARSONS, Ltd., 19, Portugal Street, Kingsway, W.C.

GUARDIAN ASSURANCE COMPANY, LIMITED.

Notice is hereby given that the Directors of this Company have resolved to pay on 31st December next an interim dividend of 3/- on each Ordinary Share, and the dividend of 2/- on each Preference Share, both subject to income tax. The TRANSFER BOOKS will be CLOSED from the 1st to the 15th December, both dates inclusive.—By order,

GEO. N. REYNOLDS,
General Manager and Secretary.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies.

Application will be made in due course to the Stock Exchange Committee for special permission to deal in the Notes now offered.

The SUBSCRIPTION LIST will be CLOSED on or before SATURDAY, the 20th day of NOVEMBER, 1920.

THE SANTA GERTRUDIS CO., LTD.

(Incorporated under the Companies (Consolidation) Act, 1908.)

SHARE CAPITAL:

1,500,000 Shares of £1 each, all of which have been issued and are fully paid.

NO DEBENTURES OR DEBENTURE STOCK HAVE BEEN ISSUED.

ISSUE OF

£300,000 8 per Cent. Five-year Notes at 98 per cent.

Notes will be registered and transferable in Denominations of £10, £50, £100 and £500 each.

REPAYABLE at £115 per cent. on or before the 30th September, 1925.

The Company have the right to redeem the whole or any part of the Notes on the 30th September, 1922, 1923 or 1924, by drawings at par together with a bonus of £15 per cent., and subject thereto the Notes will be paid at par together with a bonus of £15 per cent. on the 30th September, 1925, and carry interest as aforesaid at 8 per cent. per annum.

Interest on the Notes is payable half-yearly on the 31st March and 30th September in each year. The first payment, which will be made on the 31st day of March, 1921, will be calculated from the respective dates on which instalments of principal shall be due to be paid.

The Company may not, without the sanction of an Extraordinary Resolution passed by the holders of the Notes for the time being outstanding, issue any Debentures or Debenture Stock or other securities constituting a charge upon any part of its undertaking or property, or create any other mortgage or charge thereon other than to secure bankers' loans incurred in the ordinary course of business, or unless provision is made for the repayment of such Notes out of the proceeds of any securities to be issued ranking in priority to the Notes; but this condition does not apply to after-acquired property where there is an existing mortgage, or which is to be paid for wholly or in part by the proceeds of a mortgage or charge thereon, or to the issue of Debentures or Debenture Stock specifically secured on after-acquired property.

The Notes will be payable as follows:—

	Per £10 Note.	Per £50 Note.	Per £100 Note.	Per £500 Note.

PROSPECTUS.

The Santa Gertrudis Company, Limited, was registered on the 31st December, 1909, and throughout the whole period of its eleven years' existence has, through its Mexican Subsidiary Companies, operated with consistently successful results the Santa Gertrudis Mine in the Pachuca District of Mexico, having treated during that period 2,572,602 short tons of ore containing

184,647 ozs. gold, 34,259,517 ozs. silver.

resulting in an operating profit of £1,995,940.

For the years ended 30th June, 1918, 1919 and 1920, the net operating profits from the Santa Gertrudis mine alone, after allowing for depreciation, were:—

£213.407 0 0. £274,552 0 0. £361,600 0 0.

Following the advice of the Company's Consulting Engineer, Mr Hugh Rose, the Directors, with the approval of the shareholders, adopted in 1918 the policy of securing other sources of ore supply in the Pachuca District, and completed arrangements, through the medium of a local Mexican Company, whereby a 40 per cent. interest in the net earnings from the operation of three important groups of mines in the Pachuca Camp, known as the El Bordo, Malinche, and El Cristo was acquired under a 20 years' management agreement in consideration of the provision of working capital for development purposes and equipment. These properties are all located on the strike of well-established vein systems in this section of the mining district, which veins, in properties adjoining or adjacent to those in which this Company has become interested, have, over the psat 50 years, been productive of enormous returns in gold and silver.

Since the acquisition in 1918 of the El Bordo, Malinche and El Cristo group of mines, large capital expenditures have, in accordance with the management agreement, been made by the Santa Gertrudis Company (to finance which, advances, intended to be repaid out of the proceeds of the present issue, have been secured) in the enlargement of its Mill so as to provide for the treatment of up to 60,000 tons of ore per month (from its own property and the other mines in which interests have been acquired as above mentioned), the erection of aerial tramways connecting these three groups of Mines with the Santa Gertrudis mill, the sinking and equipment of shafts, the purchase of electrical power and transmission plant, air compressor plant and other necessary machinery and equipment, and in the development of ore reserves in the Mines to put these new interests on a productive basis. The result of the above expenditure and the completion of the work now in hand will be that from the beginning of next year the Santa Gertrudis Company should be treating at its mill a tonnage from the combined Pachuca interests of approximately 60,000 tons of ore per month, and with silver at $1 per oz and sterling exchange at $4, and the Company's established operating costs, should be earning a profit of upwards of £450,000 per annum.

The local Mexican Company referred to above is also interested in the development of another property, which it has secured under option, and the work now being carried out has disclosed a strong vein carrying highly satisfactory values.

THE MEXICAN CORPORATION, LIMITED.

The Santa Gertrudis Company, Limited, in 1919 was instrumental, with others, in forming, with the approval of its shareholders, The Mexican Corporation, Limited, and subscribed for 250,000 shares of £1 each out of a total issued capital of £1,000,000. The Mexican Corporation, Limited, on the advice of Mr. Hugh Rose, has secured, through the medium of a local Mexican Company (the Mexican Corporation, S.A.), an interest in two important mining properties in Mexico, viz., the Fresnillo Company, in the State of Zacatecas, and the Teziutlan Copper Company, in the State of Puebla.

FRESNILLO COMPANY.—Under the arrangements agreed upon The Mexican Corporation, S.A., in consideration of the provision of a large amount of working capital for the development of the Fresnillo Mine and the enlargement of its existing mill and plant, acquired a management agreement for a period of 25 years, under which it is entitled to 40 per cent. of the profits made in the operation of this Mine.

Mr Rose reports that the equipment of this property should be complete in about one year, and that the annual profit coming to the Mexican Corporation from its interest therein, based upon the treatment of 60,000 tons of ore per month from the developed and proved Quarry ore body, with an estimated proved tonnage of over 4,000,000 tons, should amount, with silver at $1 per oz, to $600,000 per annum. He further reports that with the unwatering of the Fresnillo Mine, and the development, with favourable results, of the known ore bodies lying under the Quarry ore body referred to above, an enlargement of the mill would be warranted

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist," Granville House, Arundel street, Strand, London, W.C. 2.

Single Copies, ONE SHILLING.

Copies of the *Economist* may always be obtained in Paris: Messrs Galignani, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709), and *Journal of Commerce*, 32 Broadway.

THE MONEY MARKET.

MONEY seemed to be rather more plentiful this week, though the supply was by no means too abundant, and the discount market showed a slightly easier tendency, partly owing to the purchase by the Bank of England of about a quarter of a million in gold at its statutory price. It is difficult to account for this transaction, in view of the present value of gold in the world's market, but that value, of course, only applies to gold that can get a licence from the Board of Trade to be exported. In this case the gold came from Sweden, and was not Russian, and can only have been sent here instead of to New York owing to shipping or insurance difficulties, or stipulations made as to the use of the proceeds in the

case of gold that goes to America, or owing to some unaccountable eccentricity on the part of the owner. Here it is, however, and it is said that more may follow. The incident is claimed by the authorities as a very satisfactory result of our export licence system, but a system which penalises holders of a commodity of about a third of its value is not exactly a feather in the cap of London as a financial centre. That the export licence system cannot yet be abandoned may be true; but as long as it lasts, it is a smudge on our escutcheon which we ought to be eager to wipe out, by eliminating the discount on sterling. Certainly, we may hope that events are tending in that direction. Prices are coming down, currency notes are coming back, and a decrease in the week's total of cheques cleared indicates that attempts to reduce inflation are beginning to be effective. Mr McKenna has been casting doubts on the quantity theory of money, because he has not found that the volume of money and the course of prices have shown immediate and exact agreement, and he very properly laid stress on the importance of the question of the velocity of circulation; but this proviso is fully admitted by the theory's champions, and may be said to be an essential part of it. In the meantime, the Drapers' Chamber, as yesterday's *Times* tells us, has been appealing to the Bankers' Association for more credit, and was advised to bring pressure on the Government to reduce expenditure. If it also would bring pressure on retailers to bring prices down in accordance with the fall in wholesale prices, there would be less need for credit, and the country's trade would be in a much healthier condition. As it is, the present deadlock, largely due to the prices demanded from consumers, is causing great discomfort and apprehension in industrial and financial circles.

* * * *

The Bank return showed an increase of £242,000 in the stock of gold and a decrease of £279,000 in the circulation, and a consequent increase of £521,000 in the Reserve. Government securities rose by a million, and Other by two, and there was thus an increase of 3½ millions in the deposits, more than the whole of which went to Other. The circulation of Currency Notes was reduced by £3,659,000 to £350,422,900, which includes £2,944,000 for notes called in but not yet cancelled. With a reserve of bank notes and gold amounting to £47,250,000, the fiduciary issue becomes £300,228,900, or £20,371,100 below the maximum.

* * * *

The Bank of Bombay rate of discount was advanced 1 per cent. to 7 per cent. on November 12, 1920. It had stood at 6 per cent. since November 4, 1920.

* * * *

The following table shows Public Income and Expenditure for the week ended November 13, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	16·434	Supply Services	9·970
„ Exchequer Bank Balances	·317	Interest on Debt.....	1·444
		Sundries	·368
		Reduction of Debt.....	4·969
	16·751		16·751

These operations reduced debt by a sum of £4,969,190, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Treasury Bills	+ ·267	Surrenders of Bonds, &c.	— 2·729
Treasury Bonds	+ ·555	Sundries	— ·405
National Savings Certificates	+ ·150	Ad ances by Public Departs.	— ·400
		Advances by Bank of England	— 1·500
		Exchequer Bonds repaid	— ·407
		Depreciation Fund	— ·500
	+ ·972		— 5·941

Sales of National Savings Certificates amounted to £700,000, but £550,000 went out in payment of Certificates maturing. Treasury bond sales amounted to £555,000. The floating debt was reduced by £1,730,000.

* * * *

In the foreign exchange market the seven days ending Friday have been even more exciting than the preceding week. Movements have been violent, and there has been little trustworthy information as to their cause. The first exchange to attract general attention was Madrid, the peseta rate rising during the day of the 11th to 28.35. On the following day it reached 28.90, but with the beginning of the week there came a reaction, with a steady fall, until 26.50 was reached yesterday. The general explanation for this depreciation has been the increased note issue and the difficulties of Spanish finance, together with a heavily adverse balance of trade, and political and social unrest. The immediate cause of the movement is said to have been heavy purchases of cotton and grain in America, but there was probably some further influence which is not yet generally known. Spain holds a very large gold reserve (over 50 per cent. of the note issue), but it is confidently stated that there is little likelihood of any of this being released. On Monday there were signs of renewed strength in the dollar, which jumped to over 3.40, on Tuesday was up to over 3.48, and on Thursday at one time to nearly 3.49. Since then the rate has dropped away again, and early yesterday was about 3.45. As compared with a week ago quotations for futures have considerably widened, being 2 to 2½ cents above spot for one month (1½ to 2 cents last week), 4 to 4¼ cents for two months (3 to 4 cents), and 6 to 6¼ cents for three months (5 to 6 cents). During the same period the Paris quotation has fallen from 58.40 on the 12th to about 57.10 on the 18th. Yesterday, however, there has been a reaction, Paris being quoted at about 58 again. Brussels moved with Paris from 55.25 down to 54.10, and up again to 54.60. As will be seen, the spread between the two rates has again somewhat widened. Although to some extent the rise in the dollar may, as indicated by the movements of Paris and Brussels, be due to a falling off of the recent Continental demand for American exchange, the Paris and Brussels recovery has hardly seemed a sufficient explanation, and the market has been tempted to connect it in some way with the spectacular and up to now unexplained movements of the mark. Standing at 291 on the 12th, after having been nearly 300, it fell away rapidly, being quoted on Wednesday for a time as low as 215, rising again on the same day, however, to 242, and since then up to 265. The other movement of importance has been the steady and almost equally surprising appreciation in the value of the lira, which has moved down from 97.50 to 89.75 on the 18th, rising again, however, yesterday to about 93. Among neutral exchanges Switzerland has moved about 10 centimes in our favour to 22.20, Copenhagen and Christiania have again risen about 10 ore each, while Sweden has moved sharply about 20 ore upwards, and now stands about at par. Lisbon and Helsingfors have both depreciated, Vienna is 200 krone better at rather over 1,000, but there is no improvement in Warsaw. Silver has shown a downward tendency. Rupees are 1d lower at 1.7, Hongkong 2d lower at 3s 11d, and Shanghai 3d lower at 5s 2d.

EVENTS OF THE WEEK.

NOVEMBER 13TH.—Mr Asquith criticises Government expenditure. Further report on St Omer Dump published.

NOVEMBER 14TH.—Fall of Sebastopol.

NOVEMBER 15TH.—First meeting of League of Nations at Geneva. Commons pass financial resolution relating to Ministry of Health Bill.

NOVEMBER 16TH.—Defeat of M. Venizelos in Greek elections announced. Lord Curzon's speech on Persia in House of Lords.

NOVEMBER 17TH.—M. Rallis new Greek Premier. Council of League of Nations to form provisional Financial and Economic Consultative Committee. Mr McKenna's speech at Manchester University. League of Nations votes against publicity. House of Lords debate on Government staffs and buildings.

NOVEMBER 18TH.—Premier announces that draft agreement for trade with Russia is to be drawn up.

NOVEMBER 19TH.—Mr Asquith denounces reprisals policy.

ACCOUNTS, EXPENDITURE, AND TRADE.

SOME members of the Government appear to be much annoyed at the form in which certain attacks upon public expenditure have been framed, and in particular instances these defenders of Government waste have a good case. For example, a certain prominent newspaper, criticising Captain Guest's arguments in regard to the Shipping Ministry, recently stated in its finance columns that this Ministry—

> at the beginning of the financial year had assets which are expected to yield £16,754,000.* It expects to spend £16,279,525 in the process of obtaining this money. Thus at the end of the year the Government, instead of holding assets worth £16,754,000,* will have a sum of £474,475. Thus the taxpayer will have lost £16,279,525 on balance, which apparently is the price of the luxury of having a Shipping Ministry.

Captain Guest might fairly call this a grossly unfair statement. As a matter of fact, the Shipping Ministry is engaged both in buying and in selling, and the greater part of its outlay is for the purchase or hire or building of vessels. The Department itself costs about £220,000. In stating these facts we have not the slightest desire to defend the existence of this Ministry. Our whole object is to urge that those who attack public expenditure should attack it on sound grounds, backed with accurate statements, and that they only do mischief to the cause of economy by such misleading statements as that which we have above quoted.

The real case against the Ministry of Shipping is that it is continuing to do work which the country does not want done. Among the principal items of its expenditure are the following :—

Hire and expenses of requisitioned and other vessels	£17,500,000
Freight and passages	725,000
Purchase and building of vessels	3,060,000

* Should be £16,745,000.

These items, with one or two small items, plus the cost of the Department itself, make up a gross total expenditure of something over £21,520,000. From that is deducted, under the curious way in which our national accounts are presented, a sum of £5,240,000 for "Appropriations-in-aid." In addition to this item of Appropriations-in-aid which is deducted from the gross expenditure, there is another separate item of £16,745,000 coming under the head of "Estimated Extra Receipts," which is to be credited to the public revenue.

With such a muddled method of keeping accounts it is excusable that critics of the Government should sometimes overstate their case. It is less excusable that the defenders of the Government should make equally serious blunders on their side. Thus we find Mr Hope writing to challenge the accuracy of Mr Asquith's criticisms of the expenditure of the Ministry of Munitions. Mr Hope gives certain figures of the estimated expenditure and estimated receipts of this Ministry, and works out that there will be a credit balance of £180,997,000. Upon this he makes the illuminating comment :—"In other words, the Ministry of Munitions is, and so long as it lasts will be, a great revenue Department, and will certainly bring in during the current year a net sum equal to the whole revenue of the country within recent times." That is to say, according to this apologist of the Government, a Department which is engaged in selling war material is entitled to claim that realisation of these capital assets is exactly analogous to the revenue earned by such a Department as the Post Office, which is earning current revenue for current services rendered.

In fairness, however, to Mr Hope, it must be admitted that he is only following the example of a greater authority than himself. In matters of finance the principal national authority is the Chancellor of the Exchequer, and Mr Austen Chamberlain is responsible for the practice of treating the sale of war material as a source of revenue. In his Budget statement, and in all the national accounts issued from the Treasury under the heading of "Revenue," there appears an item called "Special Receipts," which is known to mean sale of war stores. Obviously this is not revenue in the ordinary sense of the term; but the Chancellor has this much excuse for his questionable bookkeeping, in that he was able to state in his Budget speech that about 300 millions of the year's expenditure represent a transitory charge directly or indirectly due to the war.

To return to the question of such departments as the Ministry of Shipping and the Ministry of Munitions, the real point of criticism to be directed against these departments is that they are needlessly prolonging their existence. The Ministry of Shipping may have been necessary in war-time, but there is absolutely no necessity why a Government Department to-day should be hiring and purchasing and building vessels. Such operations as these are injurious to the nation, not because of the sum they cost for official salaries and expenses—in this particular case £220,000—but because of the resulting interference with the free operations of commerce.

How injurious this Government interference with business may be is perhaps best illustrated by the operations of the Food Control Ministry. Almost every trader throughout the United Kingdom is constantly being worried in one form or another by the regulations made

by the Food Control Ministry, some of them made in order artificially to lower prices, thus checking supplies, others made with the opposite purpose of forcibly maintaining a high level of prices in order to enable the Ministry to clear off stocks which it had accumulated by imprudent buying. Nor is it only at home that injury has been done by the operations of the Food Ministry. Our Canadian correspondent writes that there is a growing feeling of indignation in Canada at the way in which the British Food Ministry refuses to buy Canadian wheat. "The idea," he says, "is gaining ground that the chief interest of the British Cabinet is to protect their own farmers, and also to placate America." Canadian critics, on the other hand, might remember that their own Government, by putting an embargo on the import of Canadian securities from England is not helping to smooth the financial relations between the two countries. Our correspondent incidentally points out that when he said in his letter published in last week's *Economist* that there were 400 million dollars' worth of Canadian securities in England, he was only referring to those that have been mobilised for export to Canada, and that the total is very much greater. What the defence of the Food Ministry in this case may be we do not know. The point is that just because it is a Government department that is acting in the matter, commercial dissatisfaction in Canada takes the form of a suspicion directed against the whole British Government, which is accused of sacrificing imperial interests for some recondite political motive.

The Food Ministry ought to have been wound up long ago. The case of the Ministry of Munitions is different, for the enormous accumulations of war stores could not possibly be sold off to advantage in a brief period, but the reports of the Select Committee on National Expenditure show beyond dispute that the operations of the Ministry of Munitions have in many cases been extremely unsatisfactory. The case of the St Omer dump has been revived this week by a fresh report by this Committee, confirming its previously expressed view that "due care in the sale of the dump has not been exercised." Moreover, the cost of this Ministry is itself a very serious factor. The headquarters staff and branch offices alone are estimated to cost in the current year £1,370,000, the outdoor staff £2,056,000. Of many of the other items in the gross total of £58,190,000 for which the department is responsible it is only possible to say that they are, as presented in the estimates, absolutely unintelligible.

It is, in fact, impossible for the House of Commons or for any other outside body to get at the back of the financial transactions in which these great overgrown departments are still continuing to engage, but the nation has to foot the bill. There are many indications that its growing resentment will have to be taken seriously. The emasculation of the Ministry of Health's Bill at the beginning of the week showed the Government in a yielding mood at least with regard to expenditure, which would, if well and economically conducted, be much more defensible than military ventures in Mesopotamia and Russia. As to Russia, the revised terms of the trade agreement are expected to be announced very soon. We certainly want all the trade that we can do, and as long as the terms do not condone repudiation, the opening of Russian trade seems to be much the best way of bringing the country back within the comity of nations. Efforts are now being made to stiffen the back of the Ter Meulen credit scheme by means of insurance policies. It needs some such support if it is to be of much practical service.

THE PROBLEM BEHIND BRITISH DYES.

The problem of what is to be done about British dyes is many sided. It cannot be disposed of with a wave of the hand directed towards a code of general trade principles—"Them's my sentiments." The industry is one which, with little or no change in plant, can be turned at short notice from colour production to the manufacture of poison gas and high explosives. A dye factory is a potential munition factory. We suffered most severely at the beginning of the war for lack of a home dye-producing industry, and at great cost and trouble we built one up. We may not have succeeded in establishing a very good one; there would appear to be little doubt that the high-class German and Swiss dyestuffs are much more varied and more lasting than ours. But, such as it is, a home industry has been set up, supported by Government capital, and definitely promised special treatment for ten years after the war officially ends. Even the most resolute Free-trader, however much he may have disapproved of the giving of an official pledge by the Board of Trade to the British Dyestuffs Corporation—and quoted in their prospectus of July, 1919—would hardly suggest now that the promise of some measure of protection by licensing foreign imports should be repudiated. But he would rightly maintain that the manner of redemption of that pledge must be most carefully considered and most carefully watched.

For upon an adequate supply of dyestuffs of the fullest range and the highest quality depend British industries, whose products are a hundred times more valuable than the dyestuffs by which they are coloured and made attractive to home and foreign customers. Before the war the textile and other colour-using industries of the United Kingdom consumed annually two million pounds' worth of dyestuffs (chiefly German), and exported more than two hundred million pounds' worth of goods into whose manufacture these dyestuffs had entered. Taken by itself dye-making is a small trade, but it is a typical "key" industry in the sense that scores of industries of far greater monetary value depend upon its productions. Dyes enter as a component into almost everything except the metal trades—cottons, woollens, silk, leather, wood, paints, paper, ink, even foodstuffs. And seeing how essential it is that the British trades which use dyes, and export dyed goods, should have at their disposal at the lowest possible prices the best and most varied dyes which the world produces, we must be careful to see that the interests of these trades are not sacrificed to the urgency of establishing a national British dye industry. They must not be penalised in the competitive markets of the world by being cut off from the employment of the best dyes which have been, and still are, German.

The Government which gave the pledge of protection by import licences to the makers of British dyes never cherished the illusion that the great textile and other dye-using industries of this country could dispense with German colours. During the war they went to Switzerland for the best of their dyes, bartering against Swiss colours the British coal tar from which they were extracted; and when hostilities ended they stipulated under the Treaty of Versailles that the Allies should have an option on 50 per cent. of Germany's stock of dyes on August 15, 1919, and should further be able to call for 25 per cent. of Germany's dye production for five years from January, 1920. Germany has reached a higher level in dye making than any other country, and German dyes are essential for the highest qualities of coloured textile goods. British textile industries must have the best dyes in the world—everybody admits that proposition; the problem is to reconcile this necessity with the support of a British dye industry to which the Government, and through the Government the country, is definitely pledged.

The Prime Minister has stated that legislation will be introduced (probably after Christmas) to give effect to the pledge of import licences, but no indication has been given of the precise lines upon which legislation will proceed. We may assume that the imports of foreign dyes will be prohibited except under licence, and that dye users and dye producers will both have an effective say in the grant of licences. That was the Government's policy, and was put into practice until the Sankey judgment declared it to be *ultra vires* of the existing law. Our inquiries indicate that there is great divergence of view between dye users and dye producers concerning the working of a licence system. The dye producers, it would appear, are frankly Protectionist. They admit that German dyes must be allowed in, but they want a heavy tariff to be imposed, or —what comes to the same thing—a heavy *ad valorem* licence duty. The dye users, on the other hand, though not hostile to a licence system, object entirely to tariffs or licence duties. They are willing that foreign competition with the dye makers should be limited in quantity as regards the range of colours which they produce, but they want a free market for all those colours—and they are the best and most valuable—which British dye makers do

not produce at all, or do not produce efficiently. This clash, the eternal clash between the producer and the consumer, extends itself into the sphere of politics. The Coalition Unionists, who were Tariff Reformers in the old days, sympathise with the Protectionist views of dye producers, but are uneasy about the effect of dye tariffs on textile exports. They do not want to throw Lancashire and Yorkshire into political opposition. The Coalition Liberals, who include the Prime Minister, have a holy political horror of being mixed up with tariffs. They have not forgotten the electoral fate of Mr Balfour's Government. The Cabinet, we believe, is sharply divided with a powerful Free-trade section fully able to hold its own. A Press propaganda is being carried on, of which the inspiration is plainly Protectionist. Behind the claim, the admitted claim, of dye producers to special treatment are being marshalled the forces of all those who seek to keep up prices artificially against the consumer. The case for British dyes is mixed up with cries of Protection against "dumping," and against imports from countries whose exchanges have collapsed relatively to our own. Just at the moment, when the consumer is cheered by some prospect of a fall in prices, all the interests who seek to keep prices up are using the argument of dyes to support a claim for general protection, just as for the same purpose they are using that fear of unemployment which is never very far from the mind of the wage-earner. It is an unpleasant spectacle. We are not surprised at the disgust which the wage-earner feels, or at his contemptuous dismissal of the inspired propaganda as another "capitalist" dodge to rob him through high prices of the improvement which he has secured in wages.

We have no liking for subsidised State industries, but we do not dislike them so heartily as we do Protectionist tariffs. One at least knows with subsidies that the money goes into the pockets of those for whom it is intended. A British national dye industry must be built up and maintained. So long as warfare between nations is a possibility, Governments must have under their hands within their own borders the means of turning out rapidly high explosives and poison gas. Dye-making plant provides the means for both these modern horrors. We must at present pay regard to the world as it is, and it is not a world at peace nor apparently much in love with peace, though very heartily sick of war and its responsibilities as the Greek elections have shown. If we cannot teach it to love peace, there is nothing but ruin ahead of the world. Mr McKenna has this week told a Manchester audience that "if we wish to check the rise in prices and bring about a condition of stable exchanges, Government expenditure in all countries must be reduced," that the tragic futility of war stands finally exposed, and that the League of Nations offers the one great hope. To realise this hope we all have to take our coats off. But until it is realised we must maintain peaceful plants which can be turned to the production of munitions of war. Dye factories are potential munition factories, and should be as much under Government control as Woolwich Arsenal or Portsmouth Dockyard. They should be made, if possible, to pay their way, but it should be clearly understood that British dye factories were not to be allowed any monopoly or protection by tariffs, which would interpose a barrier between the great dye-using industries and a free market for supplies of the world's best dyes.

THE DIRECTION OF OVERSEAS TRADE.

The figures published in the October Trade Returns showing the source of imports and destination of exports and re-exports afford some ground for satisfaction in so far as they show a reduction in the abnormal trade balance with different parts of the world, whether adverse or favourable. Following our usual practice, we have classified the figures, which refer to the nine months ended September 30th, in smaller groups than are given in the official statistics, and have compiled the table below, which shows the balance of trade with Europe, America, other foreign countries, and British Dominions :—

JANUARY to SEPTEMBER.

	1914. Excess of Imports.	1919. Excess of		1920. Excess of	
		Imports.	Exports.	Imports.	Exports.
	Mill. £	Mill. £	Mill. £	Mill. £	Mill. £
Europe	47.7	..	201.9	..	137.3
U.S.A.	44.0	373.9	..	327.5	..
Other Foreign Countries	1.6	79.0	..	66.8	..
British Dominions	1.4	276.0	..	56.5	..
	94.7	527.0	..	313.5	..

Thus, while an excess of exports to Continental countries has been reduced from £202 millions to £137¼ millions, owing to the recuperation of many parts of Europe and a consequent recovery in ability to export, the heavy excess of imports from the United States has been sensibly diminished, and in the case of the Dominions the excess of imports this year is little more than one-fifth of the figure for the corresponding period of last year. The comparison with 1914, when Europe sent us more than we exported thither, and when trade with other foreign countries, with the exception of America and the Dominions, nearly balanced, is striking.

The rapid strides made by the Continent during the past year in its capacity for export are clearly apparent from the following table, which shows our imports from European countries during the first nine months of each of the past seven years :—

IMPORTS—NINE MONTHS.
(000's omitted.)

From—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£

Greece	1,200	1,936	2,147	653	1,577	6,779	3,678
Roumania	3,134	2	..	..	..	..	554
Turkey (European)	912	258	76	22	19	1,908	2,692
Russia	22,947	12,177	13,468	12,204	3,351	9,250	26,553
Sweden	9,143	14,110	15,317	9,227	16,974	24,128	42,490
Norway	5,524	10,323	13,342	14,076	18,980	12,722	19,118
Denmark	18,557	17,995	16,726	15,447	2,796	5,316	22,589
Netherlands	21,287	28,536	24,772	28,506	15,644	29,622	49,393
	209,833	154,407	161,890	140,876	144,909	188,691	374,863

As compared with 1919, Portugal and Greece have sent us less, and in the case of Italy and Spain the increase is not very large. But nearly every other country in the list shows a big expansion, Belgium, Germany, and Russia being prominent. Imports from Germany are well below the pre-war level, without allowing for price changes, which must have had the effect of at least doubling the 1920 figure. It may be noted that in a comparison with 1914 the largest increases are shown in imports from countries that were neutral in the war, Sweden and Norway showing exceptionally large advances.

Imports from other foreign countries are next shown :—

IMPORTS—NINE MONTHS.
(000's omitted.)

From—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
United States	95,789	178,692	221,180	260,751	379,437	410,323	438,966
Cuba	3,744	6,719	12,188	15,351	17,692	12,149	25,446
Mexico	1,422	1,629	1,546	1,182	3,800	5,141	9,874
Argentina	25,895	50,951	36,390	38,105	44,337	57,623	104,335
Brazil	6,230	6,720	6,698	7,866	7,142	8,702	10,767
Chile	4,370	7,334	9,503	8,643	15,452	5,376	10,238
Peru	2,141	2,249	2,600	2,455	5,299	5,498	11,705
Uruguay	2,170	3,603	2,852	3,807	5,014	7,695	5,761
Japan	3,172	7,040	8,749	11,813	18,156	18,120	19,703
China	3,581	5,514	6,368	6,990	7,432	14,497	20,127
Turkey (Asiatic)	2,171	292	245	357	609	3,527	4,956
Other countries	7,718	8,835	7,535	7,377	7,243	13,548	17,993
	158,403	279,578	315,853	364,697	511,603	562,099	679,871

Imports from the United States continue to mount, though the rate of increase is slightly smaller. The most prominent figure in the table is that of imports from Argentina for 1920, which is more than four times the pre-war figure and nearly double that for 1919. Imports from Chile and Peru have also doubled since last year, but Brazil shows only a small increase, and Uruguay shows a decline. Both Cuba and Mexico show a substantial expansion in their consignments here both as compared with 1919 and with 1914.

Imports from British Dominions show the following changes :—

IMPORTS—NINE MONTHS.
(000's omitted.)

From—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
Canada	20,844	27,783	42,670	54,641	82,372	84,565	66,457
Australia	28,945	38,239	25,148	54,230	37,962	85,506	91,459
New Zealand	20,252	24,960	26,393	23,395	21,118	38,828	36,445
India and Ceylon	36,715	56,291	60,554	56,204	73,104	83,551	91,753
South Africa	8,889	9,245	9,613	9,095	9,882	18,512	15,929
Egypt	13,472	15,668	18 581	26,390	43,431	37,185	57,904
West Africa	4,811	7,591	9,392	11,199	13,631	18,684	24,903
Mauritius	376	3,246	2,645	232	3,066	5,231	5,049
Straits Settlements	10,099	13,226	12,543	12,790	7,549	14,502	14,482
Malay States	1,893	2,441	4,406	6,420	1,799	4,678	5,773
West Indies	1,880	3,290	4,188	4,883	4,787	8,932	13,704
Other Possessions	6,106	7,923	9,988	11,650	13,988	15,643	22,599
Total	154,282	209,903	226,121	271,129	312,689	415,817	446,457

With the exception of Egypt, the increases on 1919 are comparatively small, and the abnormal prices paid for Egyptian cotton this year are no doubt entirely responsible for the larger figure shown for Egypt. Canada, New Zealand, and South Africa are among the declines.

Turning to British exports, we find that exports to European countries have increased by nearly £100,000, as compared with the corresponding period of 1919 :—

EXPORTS—NINE MONTHS.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.

Turkey (European)	2,186	200	67	145	428	6,112	9,629
Russia	11,843	8,633	17,747	32,788	157	7,950	7,786
Sweden	5,538	5,150	5,038	2,605	1.635	16,070	32,908
Norway	4,962	5,557	8,110	7,378	3,440	20,075	25,624
Denmark	4,189	6,163	8,887	6,132	2,060	24,854	25,746
Netherlands	10,525	17,685	24,021	21,254	16,163	27,960	52,499
Total	122,078	120,293	171,316	193,206	163,547	315,702	414.295

This year's individual totals are much in excess of the 1914 figures, except in the case of Germany and Austria. The largest increases on 1919 are shown by Italy, Spain, Greece, Sweden, and Holland. A much larger expansion as compared with last year is shown in exports to other foreign countries :—

EXPORTS—NINE MONTHS.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
United States	27,253	19,081	24,986	27,786	19,175	21,028	62,922
Cuba	1,281	1,314	1,564	1,490	1,429	1,339	4,571
Mexico	484	186	237	578	778	903	2,846

Japan	7,066	3,597	5,737	4,022	4,152	8,163	21,358
China	11,237	6,376	8,315	7,435	9,711	13,022	31,810
Turkey (Asiatic)	3,620	79	295	399	893	5,412	14,626
Other countries	11,261	5,821	6,881	7,767	10,455	11,466	24,065
Total	85,550	51,448	69,157	71,196	74,077	91,055	223,197

For the first time exports to the United States show a respectable increase on the 1914 level. A considerable expansion is also shown in exports to South America and the Far East. The bulk of the increase in exports, however, occurs under the head of the Dominions :—

EXPORTS—NINE MONTHS.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
Canada	13,981	9,881	13,596	12,964	10,212	9,854	33,792
Australia	26,252	21,402	27,079	16,249	19,162	19,318	43,423
New Zealand	7,332	6,739	9,288	5,376	5,668	7,000	18,078
India and Ceylon	52,933	36,265	41,585	47,349	40,069	45,941	138,458
South Africa	14,684	14,040	17,193	14,098	18,044	14,342	35,076
Egypt	6,548	5,823	8,343	10,680	17,495	11,503	33,983
West Africa	5,458	4,444	4,800	5,377	6,489	7,941	18,168
Straits Settlements	3,691	2,774	4,012	3,428	4,339	3,974	12,334
West Indies	1,765	1,302	1,582	1,570	1,246	1,239	3,999
Other Br. Possessions	10,477	8,680	11,378	12,536	13,804	13,475	32,475
British exports to Possessions	143,121	111,350	138,856	129,627	136,528	134,587	369,786

As compared with 1919, there is a large increase in exports to each country, but Canada and India and Ceylon stand out with increases of 250 and 200 per cent. respectively, while in the case of Egypt the increase is not much smaller.

In conclusion, we give a table showing re-exports to the principal countries :—

RE-EXPORTS—NINE MONTHS.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
France	7,859	10,267	11,085	12,414	10,715	23,489	34 261
Italy	704	2,337	2,738	2,992	3,022	3,578	4,696
Belgium	4,888	86	55	82	10	9,927	15,713
Germany	13,347	..	..	..	..	4,135	20,174
Russia	5,419	8,897	6,757	2,929	9	2,488	3,782
Sweden	631	3,252	2,174	214	61	3,646	3,951
Norway	408	1,652	4,156	893	120	1.449	1,528
Denmark	474	3,180	2,307	791	90	4,916	3,389
Netherlands	3,831	10,361	7,231	3,620	353	17,408	10,411
United States	24,525	21,728	26,369	24,878	3,119	15,382	48,501
Japan	146	206	379	219	770	1,147	1,491
Other countries	4,864	4,845	5,591	3,429	552	5,435	12,370
Total for foreign countries	67,096	68,811	65,842	52,461	18,821	93,000	160.267
British Possessions	9,700	8,809	11,033	6,166	3,986	5,253	20,192
Total	76,796	75,620	76,875	58,527	22,807	98,253	180.459

The most satisfactory feature of the table is again the increase in re-exports to the United States. France and Belgium also show an expansion, but there is a decline in re-exports to Holland. Among prominent increases in re-exports to the Dominions are Australia, Canada, India, and South Africa.

SHORT TERM NOTES.

IN view of the present popularity of short-term note issues —which seems to have been little impaired by the light lately thrown on them by the misfortunes of the Aircraft Manufacturing Company—it is well that the public should clearly grasp the nature of the security offered by such issues, and we have been asked by a correspondent to elucidate the matter. The average note issued to-day differs from the ordinary debenture usually secured by specific or general charges on assets; as a rule it is a mere promise to pay, and its holders are only entitled to rank with ordinary creditors, although, of course, before shareholders. Explosives Trades, Limited, in making their recent note issue, specifically pledged shares in Nobel's Explosives, but the right was retained of pledging the assets of the latter to secure bankers' loans in the ordinary course of business. The lack of collateral security for noteholders entitles them to a higher rate of interest, and this is usually conceded. It was pointed out to the writer by a well-known City legal authority that one of the chief securities for these notes is the past record of the company and the public faith in the names of the directors. These assets are somewhat intangible, and are not always easily convertible on a satisfactory cash basis.

Notes are now a popular form of issue, because directors require to obtain fresh capital as cheaply as possible to tide them over the next few years, at the termination of which, they think, rightly or wrongly, that a period of cheaper money may ensue. Expenses of issue are comparatively small, the public are attracted by the high rates of interest offered, and the assets of the company are left free to be mortgaged to bankers in case of need.

The first point which noteholders have to consider is, what safeguards have been devised to preserve their capital. A well-known corporation inserts provisions in its agreement with the companies from whom it purchases notes, of which the following is a summary :— Notes become due and payable at once

(a) If the company makes default for one month in payment of principal or interest.

(b) If a distress shall be levied or "an execution be sued out" against any of the property of the company and not paid off within seven days.

(c) If a receiver be appointed.

(d) If a default be made in any trust deed.

(e) If the company commits any breach of the numerous conditions in the main agreement.

The agreement provides, further, that the corporation purchasing the notes may interfere under certain conditions on behalf of noteholders, and it proceeds to set out the manner in which the company shall call a meeting of noteholders together with their voting powers, and many other minor items of considerable interest to noteholders generally.

Lastly, there is a clause in which the company under-

takes not to charge assets further without the consent of noteholders, with certain exceptions. These exceptions are usually the same in most agreements. Firstly, the company is allowed to mortgage property acquired after the date of the note issue. Secondly, a company is permitted to borrow to pay off debentures; and thirdly, directors stipulate that they shall be free to pledge the assets of the company to its bankers, provided that the advance be required in "the ordinary course of business." With reference to the first exception, it may be pointed out that it would be possible to use the proceeds of a new issue to purchase property, and then, when lean years come along, mortgage this property to the detriment of noteholders. Against this, however, it may be reasoned that the company could obtain the equity of new property with mortgage attached, pay off the mortgage, and be in exactly the same position. On the third exception many interesting points arise. What is an advance in "the ordinary course of business"? The question was put to a legal man. Naturally his reply was guarded. If a company purchased a block of shares in some other company which was linked with it by business interests, would its bankers be justified in granting an advance to finance the operation as coming under "the ordinary course of business"?

Finally, if it is accepted that short-term notes are desirable in the general commercial interest, it then remains for those responsible for these issues to consider how they can be rendered more attractive and freed from possible abuses likely to beset any form of borrowing enjoying a sudden wave of popularity. It has been suggested that directors should be further restricted in their power to mortgage the assets of a company while notes are outstanding. However reasonable this may sound in theory, in actual practice it would prove to be almost impossible. Some companies are in the habit of borrowing from their bankers as much as twice their paid-up capital at one time, and any hard and fast rule on this point would probably seriously interfere with the commercial activity of the country. One big corporation has under consideration the possibility of providing for the appointment of trustees to safeguard the interests of noteholders as against possible conflicting interests of the directors. This might be carried a step further. What apparently is needed is some control over assets in the event of companies experiencing adverse years of trading. Probably this could be arranged by a clause in an agreement between a company and trustees representing noteholders that whenever the proportion of surplus assets to paid-up share and loan capital fell below a certain point, the company would become liable to penalties.

Business Notes.

The League of Nations.—Our Geneva correspondent writes on November 15th:—The first meeting of the League of Nations, which opened to-day here, has not at all the same effect on the commercial and financial life of Switzerland which the Paris Conference had on the economic life of France. The diplomatists' meeting in Paris were surrounded by a crowd of hunters for business opportunities, the number of which was by far greater than the number of the diplomatic staff, including their army of experts. It seems that the wave of political business-making, which had its high point in the time of war-profiteering, has now gone. Also the economic and financial project-makers exhausted their energy for Brussels, and the only doubtful elements stirring about the meeting are agents of monarchic restoration in Austria, Montenegro, and other more or less interesting countries. It seems very likely that, in spite of a certain opposition, Bulgaria and Austria will be accepted in the League. The general opinion is that the only actual duties of the League, which might be fulfilled without causing political friction, are international measures of social legislation for protection of labour, hygienic measures for fighting against epidemic diseases, and perhaps unifications of transport and travelling conditions. Nowhere did I meet in discussions with representatives from all nations any with a wish to approach the thorny problems of international finance or international restriction of armaments.

The Strike of Insurance Officials.—In one respect the strike of certain minor officials of the General Accident Corporation of Perth is a small affair; in another respect it is of considerable importance. The Guild of Insurance Officials is an organisation in course of establishment, which has arisen in consequence of the employment of large numbers of temporary female and male clerks during the war. It has not yet proved its necessity, or even usefulness, as part of the regular insurance machinery. Possibly it will prove as important for insurance officials generally to belong to a guild or union as for bank or Stock Exchange clerks to organise themselves for mutual protection. There is, no doubt, a strong tendency among the so-called "black-coated" occupations to follow the examples of wage-earners, and to organise unions; and provided that these unions are prudently conducted, and are not employed to stir up needless disputes, they should in the long run benefit their constituents, and tend to establish regular employment and fair rates of pay for routine officials. The one point of real importance is that organisation of the kind should be entirely free to all those insurance officials who desire to take part in it, and that managers and directors should not take to themselves authority to interfere in any way whatever. The moment the chairman of an insurance or any other company—as Mr Low, of the General Accident has done—objects on principle to the organisation in a guild or union of his officials among themselves, he at once oversteps his functions. Even the Government has recognised the right of Civil Servants to set up organisations for mutual comfort and support. It is only when we come to national disciplined forces, such as the Navy, Army, or Police, that organisation among subordinates must be strictly controlled. In so far as this strike has been caused by the refusal of the chairman and directors of the General Accident Corporation to allow their officials to belong to a guild, the board are clearly wrong. To discharge an official merely because of his or her membership of an organisation of officials is an indefensible act of tyranny. The fact, if it be a fact, that a small proportion only of the officials belong to the guild, and that it is a weak, low-grade proportion, makes the tyranny worse. We are quite ready to believe that this new passion for organisation among the black-coated classes is a nuisance for their employers. But it is essentially one of their passions which must be left to work itself out for good or ill. Any attempt to crush it by force will magnify all that is evil and extinguish all that is good.

Cotton Machinery Expansion.—Since 1914 expansions in the Lancashire cotton industry in the way of more machinery being erected have been practically at a standstill, but there are now indications of more spindles being erected, chiefly in the Oldham district. At the outbreak of war two factories were built, but they had not been fitted with machinery, and the mills were taken over by the Government for munitions purposes. Machinery is now being installed, and it is expected that yarn will be produced in a few months' time. Three other mills are also

approaching completion, two of them being factories which have been rebuilt after being burnt down within recent years. Certain firms are making extensions, and it is anticipated that early next year there will be an increase in the cotton spindles at work in the Oldham district amounting to about 100,000 spindles. As trade at the moment is depressed, it is feared that the competition of these new mills will affect adversely the position of some old concerns.

Cotton Index Figures. — Mr Frederick W. Tattersall, of Manchester, in his cotton trade circular published this week, gives the average index figure for raw cotton, yarn, and cloth as 346. This compares with 381 a month ago, and 710 in March last, the highest level reached. Since a month ago American cotton has fallen from 250 to 241, Egyptian cotton from 529 to 471, American yarn from 390 to 359, Egyptian yarn from 369 to 338, and cloth from 368 to 322. The index figures are based upon 100 on July 31, 1914.

Cancellation of Orders.—Traders throughout the country are feeling very severely the requests which are now being received on a large scale for the cancellation of contracts. This development is due to the slump in prices. Lancashire cotton manufacturers are rather alarmed at what is taking place. A fortnight ago there was a special meeting at the Manchester Chamber of Commerce for the purpose of dealing with the situation which has arisen in connection with the attempts of American firms to cancel orders. During the last few days, writes our Manchester correspondent, the Chamber has received information from important firms engaged in the export of Manchester goods to Spain to the effect that cancellation of orders is being requested on an extensive scale. A special meeting of the firms interested has been called for Wednesday next, with a view to considering the matter and discussing the possibility of common action on the part of English firms involved.

The Organisation of Statistics.—In his presidential address to the Royal Statistical Society on Tuesday last, Sir R. Henry Rew, K.C.B., after reviewing the work of the Society during the war, made a plea for the better organisation of statistics. The agitation is not by any means a new one, but, as a result of the war, the value of statistics and the necessity for a better system of collation, both national and international, has become more widely appreciated. "The importance of fuller and more exact information, in a systematised numerical form, of the world's economic position and progress is now universally recognised. There is serious risk, however, that eager attempts to satisfy this 'felt want' may result in diffusion of energy, wasteful overlapping, and general disorder. The collection and publication of statistical information is a function of Government, and, thanks very largely to the work of the International Statistical Institute, and latterly also of the International Agricultural Institute, there are now very few civilised nations which do not admit the responsibility and make some effort to discharge this duty. If Governments should fail, there is no doubt that private enterprise would step in, for statistics are becoming more and more essential to those engaged in international trade and commerce." The speaker was of opinion that the co-ordination and development of international statistics will be best achieved through the agency and under the guiding influence of the League of Nations.

Iron and Steel Production.—The National Federation of Iron and Steel Manufacturers states that the production of pig-iron and steel, which had been 741,000 tons and 884,700 tons respectively in September, fell in October, owing to the coal strike, to 533,200 tons and 544,300 tons respectively. The following table compares the production of pig-iron and steel in the first 10 months of 1919 and 1920. It will be remembered that in October, 1919, production was adversely affected by the railway strike :—

	Pig-Iron.		Steel Ingots and Castings.	
	1919.	1920.	1919.	1920.
	Tons.	Tons.	Tons.	Tons.
First six months	3,954,000	4,145,000	4,264,000	4,877,000
July	641,000	750,600	618,000	789,900
August	521,000	752,400	474,000	709,200
September	581,000	741,000	718,000	884,700
October	445,000	533,200	433,000	554,300

The pig-iron production included 193,300 tons hematite, 162,800 tons of basic, 101,800 tons of foundry, and 46,600 of forge quality.

The Trade of Egypt.—The fall in cotton prices has had a remarkable effect upon the figures of Egyptian trade. Exports for August last amounted to £E2,195,411, as against £E5,293,116 in August, 1919, a decrease of £E3,097,705, of which raw cotton accounted for £E3,018,875. Imports in August were £E8,707,460, an increase of £E4,969,649 over August, 1919. Re-exports were £E99,343 lower at £E181,431. For the eight months ended August, imports amounted to £E67,010,712, or £E40,168,268 more than in the corresponding period of 1919, while exports were £E37,573,485 higher at £E69,593,644. Re-exports fell by £E1,765,634 to £E1,588,969. The principal increases in imports were cereals and flour (+£E8,773,845), metals (+£E5,248,762), and yarns and textiles (+£E15,429,558), and in exports yarns and textiles (+£E36,020,525).

Brisbane Tramways.—The Brisbane Electric Tramways Investment Company has £450,000 of 4½ per cent. first debenture stock which falls due for repayment at par on January 1st next. Owing to the action of the Queensland Government in its dealing with the company, the latter cannot raise the necessary money to redeem the debenture stock. Consequently the holders are to be asked to pass resolutions, at a meeting on December 8th next, which will have the effect of postponing the repayment for three years; of raising the interest from the present 4½ per cent. to 8 per cent., and to sanction a small premium being paid if the debenture stock is redeemed before the three years are up. For many years the company has paid 8 per cent. on its ordinary shares, which came to be regarded as an almost gilt-edged investment of their kind. The Queensland Government had the right to purchase the Brisbane Tramways Company, whose shares the Brisbane Electric Tramways Investment Company held, in, or after September, 1920. Payment was to be satisfied in Queensland Government 4½ per cent. debentures, and the only element of doubt was the precise manner in which the terms of purchase would be arrived at. Even on this point no particular qualms were entertained, for it was taken as settled that the Queensland Government would make the purchase on the basis of the profits that the tramways had earned over a short period ending with the date of the acquisition. Trouble started by the announcement that the company had been ordered to make a drastic reduction in its fares. The price of the ordinary dropped sharply. If the purchase-price of the tramways on September, 1920, or any subsequent date, was to be regulated by the net earnings, it followed that any material lowering of fares might, and probably would, exercise a most unfavourable effect upon the bargain from the shareholders' point of view. Vigorous appeal was made for help from the Stock Exchange Committee, by those who had taken shares in the company on the strength of the assumption that fair dealing might be expected from the Queensland Government. The Stock Exchange Committee was sufficiently impressed with the case to consider it advisable to take the very unusual step of bringing the matter before the appropriate authorities, who took it up with such effect that the fares, we believe, were restored to about their original level. The mischief, however, had been wrought; confidence was severely shaken, and Mr Theodore, the Prime Minister of Queensland, found this case of the Brisbane Tramways one of the main stumbling-blocks which, in the event, caused him to return to Queensland without having succeeded in arranging the loan which was the principal object of his visit to

this country a few months ago. At a meeting in Brisbane on September 10th, Mr Theodore declared that the right to acquire by purchase the Brisbane Tramways would be exercised at an early date, and he emphasised the option of the Queensland Government to pay for the undertaking in Queensland Government debentures. The company now writes to its debenture stockholders that "it is in a position in which the company may be dispossessed of its whole undertaking at any moment, while the price to be paid for it will have to be subsequently determined, and its determination may involve prolonged litigation." The company accordingly finds it impossible to raise the money to redeem the debenture stock on January 1st next, and the holders are asked to postpone such redemption for a period of three years while the Government purchase is being settled. "The directors are advised," according to the secretary's letter, "and have every reason to believe that the amount to be paid for the tramways under the Purchase Act will be in excess of the amount required for the redemption of the debenture stock, and for the repayment of the paid-up capital of the company." The authorised and issued share capital is £975,000 in 120,000 ordinary and 75,000 preference, all of £5 each fully paid.

The Scottish Railways.—It is generally known that the Scottish railways are opposed to the grouping scheme as laid down in White Paper, Cmd. 787. As proposed therein, they are to go into a group by themselves. The reason why this suggestion is objected to is now clear by the evidence given on behalf of the Scottish companies before the Railway Rates Advisory Committee on the 10th and 11th instant. The hours of duty of railwaymen in Scotland have been longer and their pay has been lower than those in England. All now have an eight hours' day and the same rate of wages, and the result is that whereas the increased cost on the whole of the railways in the United Kingdom is estimated at 206 per cent., it is 266 per cent. for the Scottish companies. The increases in rates, fares, and railway charges generally made to meet this deficit have been general, but so long as the net receipts as in 1913 have been guaranteed, the Scottish companies have not felt the ill-effect of their receipts being less in proportion to their expenditure. As soon, however, as control ceases and the guarantee goes, the Scottish companies will be at a disadvantage. To give them a higher increase than in England will not meet the situation, as they will then be at a disadvantage in competing for coal, iron, and steel traffic with, for example, the North-Eastern. For these reasons the Scottish companies wish to have English partners in order to create a balance.

Financial Conditions in Japan.—Latest advices from Tokyo state that stocks of commodities are tending to decrease substantially, as a result of active demand for winter goods, which has also stimulated demands in other directions. This is taken as an indication that general trade conditions are moving towards stabilisation. This circumstance, backed by an advance in cotton yarn quotations, caused a general improvement in the tone of the Stock Exchange. There was, however, some stock market reaction when, on the 15th inst., the price of cotton yarn fell back sharply on account of the decline in American cotton and the price of silver. Anticipation of a decrease in stocks, the decision of silk manufacturers to extend the closing down of mills until February 25, 1921, and the preparation by the Imperial Filature Company to initiate purchases, have combined to improve matters in the silk market. Stagnation rules in the money market, and recent large debenture issues were over-subscribed. The discount rate is 9.8 per cent., and money at call is quoted 2 per cent. Bank notes in circulation are 1,634,000,000 yen, and the advances of the Bank of Japan 165,000,000 yen. Japanese imports in October were 108,000,000 yen, and exports 134,000,000 yen.

British Bank for Foreign Trade.—The directors of the British Bank for Foreign Trade have issued a circular to shareholders giving reasons for and explaining a scheme of capital reduction necessitated by the fall in the realisable value of Russian securities. The issue of the balance-sheet was postponed "in the hope that trade intercourse with Russia would be resumed and the market value of the Russian railway and municipal bonds held by the bank thereby improved." Since March, 1918, the Russian Government and the railway and municipal authorities have defaulted, with a consequent fall in the value of the securities. No distribution of profits is consequently possible "until the original value of the Russian investments of the bank has been restored or the depreciation is written off." The value of the Russian investments in the 1916 balance-sheet was £621,519. It is now £21,519. Accordingly, it is proposed, in the first instance, that the present authorised capital of the bank, namely, 300,000 shares of £3 10s each—£1,050,000—be sub-divided into 2,100,000 shares of 10s each. Of this, only 240,000 shares of the original denomination of £3 10s each have been issued, leaving £210,000 unissued. The directors propose further that each holder of 10s shares should surrender five out of every seven shares of 10s each held by him on November 30, 1920. This would mean the surrender to the company of 1,200,000 10s shares, or in all £600,000. Then the 2,100,000 shares will be consolidated into 1,050,000 shares of £1 each—that is, one £1 share for every two 10s shares. The 600,000 shares of £1 each which will be surrendered will be considered in every respect as forfeited shares, which the directors will have full power to dispose of, but which they undertake shall not be re-allotted without being first offered to the registered shareholders on terms as advantageous as those of any offer made to others. Upon the scheme becoming operative the directors can issue for cash the whole or any part of the unissued 210,000 shares of £1 each of the bank. The directors' report and statement of accounts for the year ending April 30th last show net profits amounting to £25,760, which, with the balance brought in, £79,849, makes a total of £105,609 available for appropriation. The board recommends that £75,000 be transferred to the contingency fund, and that the balance, £30,609, be carried forward. The balance-sheet figures show current deposit and other accounts, amounting to £763,185. Cash in hand and at bankers stands at £266,233, investments, apart from Russian Government and municipal bonds, Russian railway debentures, &c., amount to £179,807, and loans to customers, £641,235.

Greek Finance.—M. Venizelos has deserved well of his ungrateful country, not least by the drastic reform of taxation described in a recent report (in French) to the League of Nations, and interesting to all students of public finance. In the old kingdom there had been an incoherent mass of direct taxes, mostly imposed hurriedly to cover a deficit, and with many local exemptions; in the new provinces the Turkish imposts had been retained. In both alike there is now an income-tax of 10 per cent. on unearned income (from land, rentals, and securities), 8 per cent. on profits, 6 per cent. on professional earnings, 2 to 6 per cent. on salaries, and 1 per cent. on wages, with a supplementary tax on total net incomes, beginning with 5 per cent. on 14,000 drs (say £560), and rising by stages to 25 per cent. on 624,000 drs (say £25,000) and upwards. Since 1915 the urgent need of revenue has been met by a tax on excess profits, varying from 50 to 25 per cent. in different years. Since 1917 direct taxation has more than doubled its yield. So, since 1915, has the tobacco tax, while the revenue from alcohol has trebled. These taxes, with the stamp duties (also much more productive) and the financial administration, have been remodelled. A new Customs tariff is in preparation. Since 1915 the revenue from monopolies (assigned, with the tobacco tax, for the service of the External Debt) has increased by more than 150 per cent. No mere change of Government can seriously weaken the bondholders' security; but it had reached its maximum under M. Venizelos, and we trust that his successors will carry on his financial reforms.

Aerated Bread Company.—Since its amalgamation with Buszard's, two years ago, the Aerated Bread Company has made good progress, and the report for the year ended September 25th last shows a further increase in both gross and net profits, but the report points out that the per-

centage of net profit on turnover is less than last year in consequence of the further increase in wages, working expenses, cost of goods, &c. The following is a record of profits and appropriations since 1907 :—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward,
	£	£	£	£	£	%	£
1907-8.....	276,252	220,366	55,866	5,000	50,409	27½	17,376
1908-9.....	276,101	224,822	53,249	5,000	50,167	27½	15,458
1909-10	281,852	233,348	48,534	5,000	45,425	25	13,567
1910-11	283,695	236,203	46,492	5,000	40,883	22½	14,176
1911-12	284,319	227,801	56,518	8,239	45,424	25	17,031
1912-13	308,114	234,091	77,023	8,000	*54,791	27½	31,263
1913-14	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15	286,919	253,146	36,003	8,000	29,948	17½	26,598
1915-16	299,434	282,354	17,080	11,764	7,959	5	23,955
1916-17	289,199	303,882	*Dr14683*	8,000	..	..	1,271
1917 18	419,112	322,566	96,546	59,000	28,135	15	10,682
1918-19	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20	685,831	520,274	165,557	57,882	113,050	25	14,757

* Includes special bonus to employees.

As will be seen from the analysis of the balance-sheet in another column, the capital of the company has been increased from £425,000 to £977,500. Of this increase £488,750 shares were issued to the shareholders as a free bonus out of accumulated reserves and share premiums. This accounts for the reduction in the rate of dividend from 30 to 25 per cent., although the amount required is £32,550 more than last year. The reserve appropriations include £20,000 for depreciation, £22,500 for income-tax and corporation tax, £5,000 for staff recreation ground fund, and £10,382 for expenses of new issues. This raises the total reserves to £77,900, a somewhat low figure, which makes the wisdom of capitalising reserves by a company which has only just emerged from a critical period look rather questionable. The property item stands £219,600 higher at £729,700. Other changes in the balance-sheet include a new holding of £150,000 Treasury bills and a reduction of £26,900 in investments.

Correction. — In our Berlin letter in last week's issue, on page 866 the total of Reichsbank and Darlehnkassenscheine notes was given as 613.4 millions. This should have read 1,613.4 millions. We regret the mistake, which was due to a printer's error.

On December 10th, Sir George Paish will lecture on "Supply and Demand," at the Caxton Hall, at 7.30 p.m. Requests for tickets should be sent to the Secretary, The Efficiency Club, 60-61 South Molton street, W. 1.

The Rt. Hon. Lord Sydenham of Combe has been elected to the office of president of the British Empire Producers' Organisation.

UNITED STATES.—SEPTEMBER RAILROAD EARNINGS—FOREIGN TRADE AND EXCHANGE RATES — $100,000,000 FOREIGN TRADE FINANCING CORPORATION BEING FORMED — ELECTION RESULT INCREASES CONFIDENCE.

(FROM OUR CORRESPONDENT.)

New York, November 5.

Despite the increase in freight and passenger rates, earnings of railroads in this country during September were not sufficient to provide a net operating income of 6 per cent. (which the Transportation Act allows) on the value of their property investment, as fixed by the Interstate Commerce Commission, according to an analysis of reports of 160 out of 187 Class 1 railroads to the Bureau of Railway Economics. Owing to the unsatisfactory showing for that month, rumours are current that applications may be made for additional increases in rates, but such reports are not credited by well-informed interests. The new rates did not take effect until about September 1st, and it is therefore too early to draw conclusions as to the earning capacity of the railroads under the higher schedules. October is expected to make a better exhibit, but several months' operation will probably be required to determine whether or not the new freight and passenger tariffs will yield the return prescribed by Congress. Obviously, a great deal depends upon the volume of traffic handled by the carriers. The total operating revenue of the 160 railroads in September showed an increase of about 25 per cent. over such revenues for September, 1919. In its decision advancing rates, the Commerce Commission estimated that freight rate increases averaging some 35 per cent. over the entire country, and passenger fare increases of 20 per cent., would bring net railway operating income up to the prescribed 6 per cent. rate. Operating expenses for September, however, increased approximately 28 per cent. over those of the corresponding month last year, and net operating income increased about 4 per cent. Unless the complete returns change the net income as now indicated, the railroads will show a net operating income for September of about $80,000,000, whereas to have a return of 6 per cent. for the entire year they should have earned approximately $109,000,000 in that month. Railroads in the eastern district reported an increase of 30 per cent. over September, 1919, in total operating revenues, but operating expenses were 34 per cent. larger, and net operating income gained only 2.5 per cent. Western lines report a gain of 18 per cent. in gross revenue, and an increase of 24 per cent. in expenses, while their net operating income declined about 8 per cent. The best showing was made by southern roads, whose operating revenues were 24.50 per cent. higher, and operating expenses 22.77 per cent. larger; the increase in their net operating income over September, 1919, amounted to 77 per cent.

Figures just compiled by the Interstate Commerce Commission indicate that private operation of the railroads for the first six months following the termination of Federal control will cost the Government no less than $656,000,000. During that period the carriers suffered an additional deficit of approximately $203,000,000, and in addition to that sum the Government must pay them $450,000,000, which is the amount of the guarantee provided in the Transportation Act. A portion of the new deficit is due to the increased pay granted to railway workers by the Railroad Labour Board.

Statistics of our September foreign trade, published by the Government this week, showing countries of origin and destination, are interesting, because they throw additional light on that month's unexpectedly large decrease of nearly $150,000,000 in our imports as compared with August. The heaviest reduction was in imports from Asia; imports from India declined $9,000,000, from China $10,000,000, from England, France, and Italy combined $12,500,000, and from all countries of Europe $23,700,000. The marked falling-off in imports, together with the substantial increase in September exports, help to explain the continued weakness in foreign exchange rates. Practically all foreign exchanges declined sharply this week. Demand sterling fell about 5 cents to $3.39¾, while francs dropped to 6 cents, the lowest figure touched in more than six months. Italian lira was extremely weak, falling to 3.50 cents for demand, the lowest point on record. Exchange rates on Spain, Holland, Switzerland, and Greece also suffered heavy declines, in some cases to the low levels of the war period. Bankers say that the present weakness is due largely to heavy offerings of grain and cotton bills at a time when there was very little support in the market. Many apparently withheld their bills until after the election on Tuesday last, expecting improvement would follow a Republican victory, while a considerable quantity of bills was also withheld on expectation that a settlement of your coal strike would cause an upturn in exchanges. Such calculations were completely upset, however, with the result that bills in large volume were hastily thrown upon the market. There also appeared to be some speculative short-selling and liquidation of holdings acquired on the previous rise in anticipation of further improvement.

It is expected that the new foreign trade financing corporation, the organisation of which has been authorised by the American Bankers' Association, will be formed in time to start active operations on or about January 1st. The corporation will be organised under the provisions of the so-called Edge Law, and will come under the supervision of the Federal Reserve Board. It will have an authorised capital of $100,000,000, of which 25 per cent.

must be paid in by the time the corporation begins business, and the balance will be paid in in 60-day periods. Its capital will be distributed as widely as possible throughout the United States, in order that all localities may receive the benefit of its operation. The corporation is being formed because, as one bank remarks, "the foreign credit situation has reached a point where loans to foreign countries are no longer adequate to meet the needs of the growing foreign trade of the United States." It will not make loans, but will provide a source of long-term credits through investment abroad. In commenting upon this new undertaking, the Guaranty Trust Company points out that the surplus of the United States this year will include about 8,000,000 bales of cotton, 300,000,000 bushels of wheat, $750,000,000 worth of semi-manufactured raw materials and finished manufactured products, and about $250,000,000 worth of packing-house products. "European countries," it adds, "are in the market for the major part of this surplus, but payment in gold before the goods are shipped cannot be made in any significant amount. The natural commercial course for the United States to follow under the circumstances is the course which Great Britain has so profitably taken through the years of her foreign trade development—the investment of capital in foreign countries through foreign trade financing corporations." With its $100,000,000 capital, the power of the new corporation for assisting our foreign trade will be almost unlimited. Under the provisions of the Edge Law such an organisation may issue debenture bonds for sale in the United States, and the extension of credits abroad up to ten times the amount of its capitalisation. The maximum possible financing power of the corporation will, therefore, be $1,000,000,000, which is equal to more than 9 per cent. of this country's total foreign investments. President John S. Drum, of the American Bankers' Association, has issued a call for a meeting in Chicago on December 10th and 11th of bankers, producers, importers, and exporters from all parts of the country to perfect organisation of the proposed corporation.

The sweeping Republican victory in the national election last Tuesday is most gratifying and encouraging to financial and business interests generally; it has created a more confident and hopeful sentiment throughout the country, but has caused no noticeable improvement in trade and industry, which, as a matter of fact, are even quieter than heretofore. Money stringency, price readjustments and uncertainties, and only hand-to-mouth purchasing as a rule are still the dominant factors. Cooler weather is stimulating retail trade in seasonal lines, but retailers generally, it is asserted, are retarding the process of readjustment to more normal conditions by refusing to make price concessions even approximating the reductions already made and widely announced by manufacturers and wholesalers in many lines. Retailers are apparently counting on the Thanksgiving and Christmas holiday trade to relieve them of some of their stocks accumulated at high prices.

The stock market is quiet and very irregular; industrial shares generally are weak, while rails display an advancing tendency, which, however, is held in check by tight money. Bonds continue very active and strong. No large foreign financing was announced this week, but additional issues of new foreign securities are under negotiation, and are expected to be offered here shortly.

FRANCE.—THE RAILWAYS—GOVERNMENT EXPENDITURE—GROWTH OF EXPORTS—NINE MONTHS TRADE—REVENUE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 16.

THE reassembly of Parliament has brought within measurable distance the discussion of several important economic problems, one of the most important of which is that connected with the national railway systems. The Government measure, which is due for discussion in the near future, involves a scheme for the quasi-nationalisation of the whole of the lines that have not yet been taken over by the State—that is, all except the Ouest Etat, which was taken over several years ago—and their working as a unified undertaking. It is hoped that by the adoption of the new plan it will be possible to avoid a continuance of the heavy deficit that the lines have latterly shown on working, as a consequence of the upheaval caused by the war. The discussion of the Budget, which it had been hoped to conclude before the end of the year, has now been postponed until January, ostensibly owing to the fact that the detailed estimates of some of the Governmental Departments were presented too late to enable the Finance Commission of the Chamber to consider them in time for the debate to begin this month, as had been expected. Meanwhile some sensation has been caused by a letter sent by the Finance Commission of the Chamber to the Minister of Finance, explaining that, in view of the present situation, the Commission cannot see its way to recommend that the deficit of 2,870 millions in the Extraordinary Budget shall be met by further borrowing, except to such extent as may be necessary to meet the requirements of the devastated areas and the completion of the national economic plant, and only in so far as the money so raised may be recouped from the sum to be paid by Germany. The Commission is in agreement with the Government as to the inadvisability of imposing fresh taxes until, at any rate, the new taxes voted last June have shown their real yield, and it urges that rigid economy should be practised in order to reduce the deficit referred to as much as possible. The principal factors comprised in the extraordinary Budget are estimated expenses in Cilicia and Syria, 1,200,000f; Morocco, 594,000,000f, as compared with 380,000,000f in 1920; manufacture and purchase of war material asked for by the War Minister, 770,000,000f. The Commission insists that, in view of "the serious diplomatic and military questions that demand the equilibrium of the Budget for 1921," it is the duty of all in the public services to point out any expenditure that is not of absolute urgency, and that "any action that would have the effect of causing expenditure to be incurred without the authorisation of Parliament is a fault that merits punishment."

Figures issued by the Ministry of Finance, in connection with the efforts that are being made to assure the success of the new National Loan, include some striking proofs of the rapid recovery of French exports since the end of the war. These disclose the following comparative figures for the first seven months in each case of the years 1918, 1919, and 1920 (in millions of francs):—

	1918.	1919.	1920.
Foodstuffs	260	528	1,080
Chemical products	251	263	985
Hides and skins	226	473	1,029
Articles de Paris	258	514	1,149
Motor cars	74	147	848
Tissues	185	355	1,057
Textiles (raw)	85	169	1,060
Silks	434	890	1,356
Metallurgical products	127	233	1,249

The decrease in imports during the same period is given as follows:—1918, 22,300,000,000f; 1919, 35,100,000,000f; 1920 (nine months), 27,200,000,000f. These figures are extracted from the returns of the Customs Department.

Returns are now available for the imports and exports of France for the first nine months of 1920. On the whole these must be regarded as very satisfactory from the French standpoint, because the importation of foodstuffs has very considerably decreased, while the increase is due largely to raw materials, manufactured articles amounting to some 231 milliards increase as compared with last year. Exports of all sorts are very greatly in excess of the previous year's figures. The exact figures are as follows, being given in francs.

(000's omitted.)

Item.	First 9 Months, 1919.	First 9 Months, 1920.	Increase in 1920.	Decrease in 1920.

Increase in 1920	..	..	9,853,494	

The official returns of revenue derived from indirect taxation and Government monopolies for the month of October (which does not, of course, include the yield from the income-tax and other sources) show that the total receipts amounted to 1,331,571,000f. This was 57,148,000f less than the Budget estimates for the month, but 500,070,000f in excess of the revenue from the same sources for the corresponding month of last year. The detailed figures indicate that the revenue derived from the vast majority of categories of taxation is largely in excess of Budget estimates. The receipts from registrations, for instance, were over 296 millions, or nearly 130 millions above the estimates, those from stamps 25 millions higher, and those from tobacco and other Government monopolies over 46 millions larger than had been expected. The fact that the returns from Customs duties were 56 millions below the estimate (and 21 millions less than for October last year) is, of course, explained by the high rate of exchange, which has substantially restricted purchases from abroad, while the fall of over 10 millions below Budget estimates in respect of postages, and 4 millions in respect of telephone receipts, is explained by the large increase in tariffs. The principal reason for the deficit, as compared with Budget estimates, is the fact that the yield from the new turn-over tax was 225½ millions less than expected. October, however, was the first full month since this tax came into operation, and its inventor, M. François Marsal, the Finance Minister, has all along made it clear that, despite a theoretical estimate for Budget purposes, he does not anticipate this tax will reach its normal yield much before the end of its first year of operation. Experts who favour this form of taxation predict that once it has come fully into operation it will produce between 4,000 and 5,000 million francs a year, and are satisfied, despite the figures for October, that the tax will eventually prove one of the most substantial features of the French fiscal system. The total yield for the first ten months of the year amounts to the gratifying sum of 3,416,507,000f more than that for the corresponding period of last year.

As a result of the general uneasiness felt in such important branches of industry as motor-cars, transport, chemical goods, textiles, rubber, and so forth, in consequence of a general restriction of credits, the position on the Bourse has been far from satisfactory, the rapid rise in foreign exchanges not having produced any notably stimulating effect. French Government stocks have been calm, and remained more or less unchanged, the 3 per cents standing at 54.95, as against 54.75. Certain foreign Government stocks, such as Argentine, Brazilian, Chinese, and Japanese, have risen owing to the exchange. Russians, in view of the news received, have rather fallen back. Banks opened the week firm, but later there was for the most part a fall. Transports are rather weaker than last week. Mining shares, such as Tintos, which have risen from 1,590 to 1,615, and Utah, which is at 973 as against 935, have moved with the appreciation of foreign exchanges.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—GOVERNMENT MEASURES—EXCHANGE AND BOURSE — IRON INDUSTRY — CROPS — LABOUR LEGISLATION.

(FROM OUR CORRESPONDENT.)

BERLIN, November 13.

THE Berlin electricity and tram strike terminated only on third of the total gross rents o flarge flat-houses. This week 20,000 house-porters are on strike, and most central-heated houses are without heating. The annual wage demanded, quite moderate in itself, averages about a third of the total gross rents of large flat-houses. This is a result of the policy of not allowing rents to rise in harmony with the decline in buying power of the currency. A strike of Federal officials is almost in sight. Pending is an official salaries reform, which increases by 50 per cent. the already often increased salaries. The lower and middle-rank officials demand 100 per cent. The Communist Press incites the lower officials to enforce this demand by revolutionary action. At present, the States, municipalities, and other public bodies raise salaries without considering the Republic's salary scale; and the Republic has so far had to follow suit. The Reichsrat has sanctioned a Bill depriving the State and local public bodies of this right, and making the Federal Finance Minister supreme authority. Even with an increase of 100 per cent., the officials would be badly paid; but as the Republic, if it paid no salaries at all, would still have a deficit, a large increase at present is impossible. Federal salaries in the financial year 1920 total 18 milliards. Not high salaries—counted in gold—but unreasonable complication of the bureaucratic machine is the cause of this. Since the emancipating revolution, the State tutelage, complained of even in old days, has become extreme. The effects are doubly vicious; on one side hundreds of thousands of citizens are withdrawn from productive life, and are set as bureaucrats to the work of printing and dispatching papers, controlling, querying, and threatening with penalties; and the reduced producing population spends an increasing part of its time in keeping itself unfined.

The Bill accelerating the collection of the federal emergency levy and of the war tax on increment of property has been submitted. The term for payment of the war tax has been reduced from nine to three months. The emergency levy, was to be payable in 30, in cases of landed property 50, annual instalments. The new law requires payment of at least a third of the total sum in two equal parts on February 1st and August 1st next. The Prussian Government has prepared a new provisional tax on land and houses. The tax on land is to be 10 per cent. of the value; on houses 5 per cent. As the city flat-houses do not pay 5 per cent. on invested capital, even if, as is the case, no repairs are done, the house tax will be made transferable to the shoulders of the tenants, which means that the present limit of rents to 30 per cent. over those of 1914 will be raised.

The rise in the foreign exchanges made no further progress during the week, and there was a sharp drop to-day. The fact that the Reichsbank has a relatively large reserve of foreign currency made exchange speculators cautious. Nevertheless, stocks continued to rise. To-day the sum quotation of the stocks and loans usually taken as index is 16,118, as against 15,524 a week ago, and 9,557 on June 1st, when the mark was near its highest price of the year. The chief causes of the stock rise, and probably of the cessation in the mark's fall, is heavy foreign buying of industrial stock. The large industrial profits for 1919-20 have been well advertised abroad in supposed connection with the anti-dumping agitation, though no real connection exists. As long as Germany, being short of commodities, rations export, dumping on any considerable scale cannot take place. The big profits were reaped not by increasing output, but by raising prices. The fusion boom rises every day. This week it was formally blessed as the arcanum of efficient production in a new Socialisation report signed not only by industrial magnates, among them Stinnes, but also by workmen's representatives. The reporting Commission, constituted jointly by the Reichswirtschaftsrat and the Federal Coal Council, declared that while trust-making for merely financial reasons should be condemned, this does not apply to "natural unions of interest between the coal industry and the finishing industries." Such unions are the only way of increasing production. Here "Coal Industry" means "Coal and Heavy Metal Industries," as nearly all the great coal corporations are smelters and producers of half-finished iron and steel.

In effect, this report favours increase of the so-called "Vertical Trust," which, in distinction from the "Horizontal Trust" (fusion of only raw material corporations, or only finishing corporations), combines producers in all stages from coal and pig-iron down to finished machines, hardware, and carpet tacks. The Commission recommended that small shares, of nominal value of about 100 marks, should be issued, so that employees might invest in the stock of their own companies; but it did not recommend Socialisation. Meantime, the fusions are going on. The Stinnes creation, the Rhine-Elbe Union (fuel and raw metals), which last week took in the Siemens electrical interests, has now become a giant electro-mining concern, embracing about 30 companies, employing 200,000 workmen, and conducting in addition to coal, iron, half-finished goods and electrical enterprises, also power works, trams, motor-car works, and other finishing enterprises. The exact dimensions cannot be defined, as the degree of union varies from complete fusion to mere influencing. It is noteworthy that though numerous other deals of similar kind have been carried through by Thyssen, Mannesmann, and Stumm, no anti-trust agitation of the kind familiar from American economic history, has arisen. The Bourse to-day closed firm. Rumours of a further cut in iron prices had no effect, as speculators took the report above summarised as a blow to Socialisation plans.

The iron market reports for October emphasise the decline in production caused by the increasing coal scarcity, which results from the Spa agreement. Towards the end of the month there was a sharp increase in the shortage of railway transport. This is aggravated by the fact that water transport is being less and less used. Hundreds of small canal and river craft lie idle. The Federal Railway Department, under conditions described last week, has artificially kept down freight rates, and the operating loss is covered by increasing the floating debt. Not being able to print paper money, the water transport companies have had to put up their rates in accordance with the cost of running, and to-day water transport under best possible conditions is dearer than railway transport under worst. Consigners therefore find it better to wait until they can get locomotives and cars, and water transport lies unused at a time when transport as a whole is short. This is one of a dozen instances of the havoc wreaked by the Government's habitual violations of the principle of sound finance and sound business.

The iron industry is thereby particularly badly hit. The foreign and native ore supply during October was sufficient; but part of the ore could not be moved. The rapid rise in scrap-iron prices was checked by a Government plan for maximum pricing. The demand for construction iron increased; and there is a growing foreign demand for track material and field rails. The railway rolling stock branch, which was in a bad condition, also improved, many Government orders having been given. Bar iron buying in October was checked, as it was known that prices would be cut on November 1st. As during past month the market for heavy plates has been good, but for light plates still very bad. From Holland there has been a great demand for tubes; but here French competition is complained of. The home wire market is dull; but foreign orders increased. The machine market was dull, as it was expected that the cut in material would send down prices. American and English competition in former neutral markets, particularly Switzerland and Scandinavia, is complained of. The trade journal *Stahl und Eisen* states that American machines c.i.f. are 30 per cent. cheaper than German, and that Americans, unlike Germans, agree to a three months' delivery term. Any material reduction of German machine prices is stated to be impossible; but the exchanges are working against Germany's competitors.

A provisional report on Prussia's crops this year shows a heavy decline in the rye production, the most important for national feeding. The total production of bread grains is considerably below that of last year, which was a little below that of 1918; but a large increase in potatoes partly compensates :—

	1919. Metric Tons.		1920. Metric Tons.
Winter wheat	1,094,022	....	1,061,407
Spring wheat	157,474	....	229,721
Spelt	7,687	....	12,145
Winter rye	4,724,489	....	3,836,448
Spring rye	54,032	....	71,918
Winter barley	150,921	....	137,668
Summer barley	901,212	....	959,638
Totals	7,089,837	....	6,308,945

Other chief crops are :—

	1919. Metric Tons.		1920. Metric Tons.
Oats	3,022,166	....	3,273,860
Potatoes	14,902,403	....	20,435,947
Sugar beet	4,642,204	....	6,071,702

The large increase in the potato crop at the expense of more valuable food is a result of the State maximum price policy. For no reason known, a relatively high maximum price has been fixed for potatoes, and a very low one for sugar beet, which is the only single crop that grows more than normally well in German soil and climatic conditions. Hence the beet crop, though better than in 1919, is far below that of before the war. Sugar is short; a valuable fodder is lost; and a country which before the war exported over a million tons of sugar is obliged to import from Czecho-Slovakia, and has lost a precious export asset with which she could pay for foreign bread grains. Salaries in the financial year 1919-1920 for the officials who conduct merely the bread-stuffs regulation total over 85 million marks. The area under crops, meadow and vines decreases. Omitting territory lost through the Peace Treaty, the area under cultivation has fallen from 29,348,154 hectares in 1913 to 27,934,303 hectares in 1920. The decline in some important branches (hectares) is :—

	1913.		1920.		Loss since 1913.
Meadow	1,712,759	..	1,382,199	..	330,560
Rye	5,379,408	..	4,329,957	..	1,049,451
Barley	1,437,396	..	1,320,492	..	116,904
Oats	3,966,419	..	3,237,663	..	728,756

The loss in the above four crops from this area decline is, taking average production, 3,311,780 tons. No reason exists for this decline, except the State price-fixing policy. Shortage of fertilisers, labour, &c., are all only results of the fixing of prices unreasonably low. Fertilisers are abundant; but farmers refuse to buy them. Official negotiations last for six months over the changing of maximum prices by a slight percentage, but meantime the State pays for American grain three or four imes as much as it allows home producers to charge.

The Government has achieved a new Federal Department, contrary to its recent solemn decision to take no more functions out of the hands of the State and municipalities. It has submitted a Bill centralising the Labour

Exchanges. Henceforth Employment Agency will be controlled from Berlin. All private agencies will cease to exist at the end of 1930, and the existing municipal and other exchanges will be subject to a "Reichsamt fuer Arbeitsvermittlung." This measure is advocated on the ground that unemployment insurance is being federalised. The results will be a new burden to the finances, and a new machine for what the Government's own Socialisation Commission condemned as "control on top of control instead of confidence and encouragement to independent action."

AUSTRIA.—THE DEPARTURE OF SIR WILLIAM GOODE FROM VIENNA—FURTHER DECREASE OF THE CROWN IN ZURICH—ISSUE OF NEW TREASURY BONDS—THE FOOD SUPPLY.

(FROM OUR CORRESPONDENT.)

VIENNA, November 6.

THE president of the Reparation Commission, Austrian Section, Sir Wm. Goode, has left Vienna for Paris; he is accompanied by Colonel Smith, the American representative, and will bring to the High Council a report about the economic situation of Austria. He has studied intimately the financial and economic problems of new Austria together with first-class experts for more than a year, and he will make now his proposals for the reconstruction of this country. There are great hopes in Austria of prompt and real help.

A further decrease of the crown at Zürich has taken place, and in the last days of October 1.65 was reached. Since, the course of the crown has increased a little, but it could not rise over 1.95. This unhappy state of Austrian money on foreign markets makes it quite impossible to import the foodstuffs, raw materials, and coal wanted most urgently.

The Ministry of Finance has issued a new kind of Treasury bond at 6 per cent. per annum repayable at six months; these new bonds may be discounted by the holder. There is some hope this measure will be successful in diminishing a little the rapid increase of the issued banknotes. The new bonds represent a new attempt of the Ministry of Finance to strengthen the State's credit, and to check a little the increasing inflation.

During recent weeks Vienna has not had a sufficient quantity of white flour. In consequence it was necessary to use a high percentage of maize flour in the bread, which has become yellow and brittle, and has got a bad taste. Dr Weisskirchner, a leader of the Christian Socialist party, has been in Budapest begging some flour in that neighbourhood. Vienna will shortly get some white flour from Hungary, which will permit the use of a lower percentage of maize for the bread.

GREECE.—FOREIGN EXCHANGES—CIRCULATION.

(FROM OUR CORRESPONDENT.)

ATHENS, October 26.

THOUGH Greece has been practically at war since 1912, the drachma had maintained its parity of exchange throughout a long period of troubles. During the European war it remained at par with the dollar, and was at a premium compared with the currencies of all other belligerent States, for some time even with the pound sterling. However, in the autumn of last year, the drachma began to show a weakness, from which it has not yet recovered. The principal exchanges on September 29th of last and this year were as follows:—

	1919.	1920.	Par.
New York	5.85	9.75	5.185
London	24.65	34.60	25.225
Paris.....	71	66	100

The actual depreciation of the drachma, as compared with the dollar and the pound sterling, cannot be attributed to further inflation of the currency since last year. In fact, the total circulation of the country at the above two dates shows a comparatively insignificant difference. And since the drachma is circulating also in Asia Minor and Thrace, whose monetary needs become day after day more important, an increase of the currency is entirely justified. Besides, the circulation has a nearly full cover, as the following figures show:—

(In Millions of Drachmas.)

	Circulation.	Cover.	Proportion of Cover to Circulation. %
September, 1919	1,406	1,784	127
September, 1920	1,507	1,484	98

Yet depreciation has been suffered. Early in this year it was found that the demand for foreign exchange (dollars and pounds sterling chiefly) during the second half of 1919, owing greatly to heavy imports stimulated by favourable exchanges and by forecasts of higher prices at the sources, had surpassed the offer. In view of the heavy drains of foreign exchange resulting from this situation, and despite the fact that the demand could entirely be met out of the balances of foreign exchange kept abroad by the National Bank of Greece, and the parity of the Greek drachma with the pound be thus maintained, yet it was decided to utilise the available stock of foreign exchange for the essential needs of the country, leaving the market free to supply the secondary needs. As long as the restrictions on foreign exchange dealings remained in force speculation could not exercise its whole influence on the rates. With the removal, however, of these restrictions a free play was allowed to speculative forces. Consequently the exchange rates, which were fluctuating before the repeal of the restrictions around 8 drs the dollar and 31 drs the pound, are quoted now about 10 drs and 35 drs respectively. However, the import of foreign exchange during the current year seems to exceed the export, owing to an increase in the items constituting the invisible exports—remittances from Greeks abroad for the first half-year only equal those for the whole 1919—and to a decrease in the import of goods from abroad, on account of great stocks existing in the country. Therefore, the actual depreciation of the drachma over and above what may be defined as the result of an exchange policy is rather the consequence of speculation and of psychological influences due to the international situation.

A fact considered by some people as further strengthening the depreciating tendencies is the agreement recently entered into between the Government and the National Bank of Greece, providing for a new issue of bank notes to a maximum amount of 400 million drachmas, covered by Government securities in gold money.

Letters to the Editor.

INDIAN CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In his letter of October 8th Mr B. F. Madon condemns the policy of the Government of India in altering the gold value of the rupee from Rs. 15 to the £1 to Rs. 10 to the £1. His contention is that the effect of this change is similar to that of a debasement of the coinage in that the debtor, while paying the same number of rupees to his creditor, will be paying a greater gold equivalent, *i.e.*, whereas in the case of currency debasement the creditor suffers in receiving less value than he contracted for, in this case the debtor will suffer in having to pay increased value. If we grant that Mr Madon is correct, it is necessary to bear in mind that some Government action was essential, and to consider the alternatives that might have been adopted.

The two principal factors at the time were (1) the rise in the price of silver to such a figure that the intrinsic value of the rupee exceeded one-fifteenth of a pound sterling, and (2) the activity of trade which made the provision of more currency essential. Government could not continue coining rupees at the old ratio as, even if Government were content to bear the loss, the rupees would disappear from circulation under the operation of Gresham's law, in spite of all regulations to the contrary. Government was therefore faced with three alternatives—(1) to reduce the silver content of the rupee, (2) to issue notes without metallic backing, or, in other words, to make the

note inconvertible, or (3) to change by Statute the gold value of the rupee.

As the first alternative would entail the direct debasement of the rupee, it would not presumably meet with Mr Madon's approval.

It remains, therefore, to consider the second of the alternatives. The dangers of an inconvertible note issue are too well known to need repeating, and such dangers would be greatly accentuated in India by the ignorance of the bulk of the population. Further, anyone conversant with India knows that the note of small denomination is a most unsuitable medium of currency outside the large towns. The poor man lives in a mud-hut, where he has no suitable storing place for paper money, which would, therefore, be at the mercy of the white ant and of fire and flood.

When Mr Madon states that no Government has the right to change the measure of value, he possibly overlooks the fact that in divorcing their currencies from a gold basis nearly every country in the world has been guilty of the offence. The English shilling is now only about one-twenty-ninth of £1 gold instead of one-twentieth. The fact that it is still one-twentieth of the £1 sterling does not make it the more regular as the £1 gold is the British standard. What Mr Madon says would not be tolerated here has therefore already taken place.

Mr Madon complains that the producer in India will suffer in respect of his dues to Government and to Sowcars in that he will have to pay 50 per cent. more of his produce to obtain the same number of rupees. It is questionable, however, I think, whether the full effect of the 50 per cent. rise in exchange will be felt in the prices India obtains for her exports, the majority of which are foodstuffs, which will be in good demand for some time to come, and raw materials for which she has a partial monopoly (*e.g.*, jute and hides), and which will be required when Europe has restarted her industries. In any case, an alteration in values, as already shown, was unavoidable, and in all such adjustments someone suffers. Against such loss has to be set the benefit to all as consumers in the reduced prices caused by the increased gold value of the rupee.

In his postscript Mr Madon states that it is a fallacy to consider that the poor consumers will benefit in cheaper prices, as, if they give less rupees, these rupees will have the same gold value. This argument must pre-suppose that the rupee incomes of the poor will be 50 per cent. less than they otherwise would be, which appears to me highly improbable. To the extent that this is not so the poor must benefit by their increased gold value wages. Mr Madon asks why a similar procedure is not adopted in England. If it were possible to increase the dollar value of sterling in the same way as the increase in the price of silver has made possible an appreciation in the rupee half our difficulties would be over.

It is easy at the present time to level destructive criticism at all Government financial measures, but it seems to me less easy to suggest practicable substitutes.

E. P. STOCKER.

REVIEWS.

"The Case of Requisition." By Leslie Scott, K.C., and A. Hildesley. (Oxford) Clarendon Press. 8vo, 304 pp., 16s. Introduction by Sir John Simon, K.C.

THIS book contains a history of the famous "De Keyser's Hotel Case." It will be remembered that this case raised a constitutional question of first-class importance, viz., whether the Crown could take possession of the subject's land compulsorily for purposes of national defence without incurring any obligation to pay compensation. By a unanimous vote the House of Lords decided in favour of the subject. Since then the Indemnity Act was passed, which now regulates the rights of the subject in this matter, and provides a specific method for assessment of compensation. A great deal of nonsense was written and spoken in Parliament and the Press at the time about the iniquity of the Government's attitude. As a matter of fact, compensation was never at any time refused where any loss had been incurred. It was paid *ex gratia* on the recommendations of the Defence of the Realm Losses Commission. Now it is paid *ex lege* on awards of the same body (to-day styled the War Compensation Court). There were hard cases, but they were few. Mr Leslie Scott took a leading part in the criticism of the Government, and this criticism appears once or twice in the book. To the student of constitutional law and history this book will be valuable; historical documents of great antiquity bearing upon the question are reprinted, and the speeches of the Lords given in full.

"Prices and Price Control in Great Britain and the United States During the World War." By Simon Litman. (New York) Oxford University Press.

THIS study of price movements, and of the effects of Government control in this country and in the United States during the war, has been written by Professor Litman, of Illinois University, for a series of "Preliminary Economic Studies of the War," which is being produced by the Carnegie Endowment for International Peace. The book is in two distinct sections—Great Britain and the United States, and in so far as the former was completed in July, 1918, the writer is at a certain disadvantage in not being able to view the problem in the light of post-war developments. On the other hand, as an onlooker and a disinterested party, he is able to present all sides of the case impartially, so far as Great Britain is concerned. His conclusions that Government activity in fixing prices is only justified in an extreme emergency has no doubt been strengthened by the course of events since the end of the war. It is quite true that the best methods of control "are those which enlist the co-operation of the people, whose interests are to be affected by price regulating measures," but in a short historical survey Professor Litman shows that since A.D. 301, when Diocletian undertook to fix the price of certain commodities and failed, legislation to control price and prevent profiteering has generally been abortive.

The book contains a mass of material and statistics which will prove of great value to the student of the complicated question of price movements during the most critical period of the world's history.

"Manuel des Sociétés Anonymes Helléniques 1919." (Athenes) Banque d'Athenès.

IN this book, the compiler—M. Ernest Pech—has succeeded in giving us a brief but valuable survey of Greek national debt, and a detailed record of public companies registered in Greece. Full particulars of the various State debt issues are set out from 1824, and in the tabular statement shown on page 42 we note that the total aggregate of national debt amounted to 2,353,857,965 drs, of which 259,272,204 drs have been repaid, leaving 2,094,585,761 drs outstanding. Of this sum 750,070,605 drs are owing to "three Powers." In view of recent events, it is of special interest to read the account given of the International Financial Control. The information under this heading includes Customs and other receipts dating back to 1898. National debt obligations are followed by a list of Greek railway companies. Annual accounts of these are shown in summarised form for various long periods of years, together with many vital statistics. Considerable space is devoted to banking, shipping, insurance, and mining companies. Latest balance-sheets are appended, together with Athens Stock Exchange quotations for most securities over periods extending to 20 years.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
November 25.	November 26.

Stock Exchange markets are in anything but happy mood. The Greek political crisis, the defeat of General Wrangel, the disturbance in French exchange, are three of the foreign factors which have militated against markets, while at home rumours of financial trouble in Lancashire, Yorkshire, Scotland, and in the City itself, have aroused renewed uneasiness. Everybody will be thankful when the end of the year has come and gone, for heavy American commitments in the commodity markets are said to be open for end-December, and if the liquidation of these should involve further failures in the States, Stock Exchange markets, as well as those connected with the produce concerned, must feel the effects. In these circumstances, the gilt-edged stocks of the home variety were, in the early part of the week, amongst the few firm spots round the House. Nevertheless, the War Loan, Consols, and India Government stocks gave way towards the end of the week. Substantial sales of Consols were reported. Of course, if the rumoured financial troubles do come to a head, and should lead to realisations of the War Loan on a large scale, public purchases of the stock are not likely to be sufficient to absorb heavy lines without the price giving way. Apart from these, the cheapness of the stock still commands attention, and some of the interest-money to be disbursed on December 1st, will find its way back into the market. Fifteen to twenty of the National War Bonds issues are ¼ to ¾ down. Corporation stocks hold their prices, and in Colonials there is no fresh development. The Home Railway prior-charge stocks are, if anything, rather better.

The Greek crisis has had the effect of putting down the prices of Greek bonds, while the Russian news caused further shrinkage in the Russian railway government-guaranteed bonds. French Fives went ex coupon this week, but allowing for the deduction, the bonds, and the Fours also, are distinctly weak. Argentines gave way partly on news of extremely bad weather in the Republic, partly on sales said to emanate from Paris. Uruguay bonds have been turned out by people obliged to sell what they could in order to raise money. German Threes touched extremes of 5½ and 6½ on the improvement in the value of the mark, leaving off with a substantial rise on the week. Mexicans have gone back, although no importance is attached to rumours of fresh revolutionary movements in the country.

Home Railway stocks pursue their sagging course, and the market has relapsed into a backboneless condition. Argentine Rails are flat, owing to the news of the bad weather mentioned above, and which is said to be exercising an unfavourable effect upon the maize. Cuban railways have fallen, despite the good Havana dividend, and so have Brazilians. In Mexicans, there is nothing doing, with the consequence that prices have eased off. Nitrate rails have gone back, in company with the shares of six or eight of the principal nitrate-producing concerns.

Interest in rubber shares is at an extremely low ebb, owing, of course, to the fact of the price of the produce being so flat. It is in this market that the end of December is awaited with trepidation, lest there should be more forced selling of raw rubber and renewed shrinkage in its price. The Oil market made gallant attempts to oppose firmness to the prevailing depression, but towards the end of the week the resiliency oozed out of the leading shares, which underwent a general fall, reflected upon the rest of the list. The announcement by Courtaulds of the long-expected "melon-cutting" scheme, under which two new shares are to be given free for every one Courtauld at present held, caused a sharp recovery in the price of the shares, but profit-takers quickly stepped in, and most of the gain was lost. Harrods, Buenos Aires, Deferred shares improved substantially, apparently on expectation that the forthcoming report will show the company to be in a better position than was at first supposed from the preliminary statement. The Textile market is dull, and the weakness is associated with necessary sales from the provinces. In fact, it may be called fashionable to put down to provincial selling such declines as have occurred this week in Dunlops, shipping shares, iron and steel, tobacco, and a number of others in the manufacturing groups. The Cable market is one of the few which exhibits any strength, and here improvements have occurred in the quartette of Eastern stocks. Marconi's are dull with the rest. The outpouring of new issues distracts attention from existing stocks and shares, and causes sales of some of the latter on the part of people who think they can do better by making application for the latest comers. Both Banking and Insurance markets are quiet, insurance shares showing an inclination to give way.

South African are in parlous case. Jobbers report that they do a little business day by day, but that orders are mainly of the selling variety. De Beers fluctuated widely according to Paris advices, and these latter have had the effect of putting down substantially Rio Tintos and Anacondas, which led to weakness in other copper shares also. Broken Hills are no better, in spite of the early resumption of work on the Barrier field after the eighteen months' strike. Mexicans have given way, and there is no life in the Indian group. A few West Africans were taken in hand professionally, and the prices advanced, but there has been no public backing to the movement so far. The week wound up with an uneasy and apprehensive feeling prevalent in most of the markets.

NEW ISSUES.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. Holders of Exchequer bonds maturing on December 1st are given the privilege of using their bonds ex dividend as the equivalent of cash at par as on November 18th for the purpose of subscription to Treasury bonds, in addition to receiving a full six months' dividend on December 1st on their maturing Exchequer bonds. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

New South Wales 6½ per Cent. Inscribed Stock, 1930-1940.—Issue of £4,000,000 at par. Principal repayable at par on August 1, 1940, the Government of New South Wales having the option to redeem the stock in whole or in part, at par, on or after August 1, 1930, on giving three calendar months' notice. The London County Westminster and Parr's Bank, Limited, are instructed by the Government of New South Wales to offer for subscription the above amount of stock. The loan is raised for permanent and reproductive works. The stock will not be subject to any taxes, duties, or levies in that State. The State Debt and Sinking Fund Act, 1904, of the State of New South Wales provides that appropriation shall be made during each financial year from the consolidated revenue fund, to be placed to the credit of the general sinking fund, of the amount of £350,000, and such further amount as Parliament may provide. This is a trustee investment.

The Ebbw Vale Steel, Iron, and Coal Company Limited.—Authorised and issued capital £3,700,000. There are also 6 per cent. debentures outstanding for £1,010,000. This is an offer for sale of £1,500,000 8 per cent. seven-year notes at 98½ per cent., repayable at par, being part of a total issue of £3,000,000, of which £1,500,000 have been applied for firm, and will be allotted. The company reserves the right after January, 1924, upon giving three months' notice in writing, to redeem the notes at par. It is agreed by the company that so long as any notes are outstanding, it will not create any fresh debentures or mortgage assets other, according to the words of the prospectus, "than to discharge or pay off all or any of the £1,010,000 6 per cent. debentures of the company, or to secure bankers' loans incurred in the ordinary course of business, or on property acquired after the date of this issue, or for the purpose of discharging the notes." The total share and loan capital, including the present issue, amounts to £7,710,000. Surplus assets, including the proceeds of the present issue, are stated to be worth £10,412,357. From this sum must be deducted outstanding debentures at £1,010,000. Thus there is a wide margin of security for repayment of capital. Past profits are not stated—a singular omission—but the £1 ordinary shares of the company since 1913 have ranged between 13s 10½d and 36s 3d in price. The dividend on the ordinary shares has been at the rate of 15 per cent. per annum for the past four years. A promising issue in its class.

Siemens Brothers and Co., Limited.—Authorised capital £1,500,000, divided into shares of £1 each. There are also debentures outstanding for £977,600. This is an offer for sale of 481,875 shares at 22s per share. The firm of Siemens Brothers was established in this country in the year 1858, and was registered in December, 1880, with the title of "Siemens Brothers and Co., Limited." Surplus assets, after the deduction of "4½ per cent. debenture stock," and including the proceeds of the present sale of shares, amount to £2,290,248. Nothing has been included for goodwill. Past profits are not given, but a statement appears in this "offer for sale" showing the rate of dividend paid in 1917, 1918, and 1919 on the ordinary shares. From the investor's standpoint, this must be considered unsatisfactory. The issued £1 shares are quoted at 25s. The British Bank for Foreign Trade, Limited, acquired this issue at 20s per share. According to the *Stock Exchange Year Book*, the pre-war record of this company was fairly satisfactory. It is, therefore, somewhat surprising to find that this record is omitted in the present statement. In spite of this reticence, the issue is not without merit for the opulent investor, the reputation of the company's products being high.

African Lakes Corporation, Limited.—Authorised capital £250,000, in shares of £1 each, of which 200,000 shares have been issued. There are 12,500 B shares, the remainder being A shares. The only difference is that B shares carry no voting power. This is an issue to shareholders only of the balance of 50,000 A shares, at a premium of 5s per share. In the Glasgow official Stock Exchange list for November 12th, the A shares are quoted at 41s. This is an attractive offer to shareholders.

The Briton Ferry Chemical and Manure Company, Limited.—Authorised capital £300,000. This is an offer to shareholders only of 57,528 £1 ordinary shares at 21s per share, and 25,407 7 per cent. cumulative £1 preference shares at par. Application will only be considered for ordinary shares and preference shares together, and in the proportion and methods stated. Shareholders will be well advised to accept the options.

James Howell and Company, Limited.—Authorised capital £500,000, divided into 200,000 8 per cent. cumulative preference shares of £1 each, and 300,000 ordinary shares of £1 each. Exclusive of the present issue, 130,000 preference and 165,000 ordinary shares have been issued. This is an issue of 70,000 8 per cent. cumulative preference and 85,000 ordinary shares at par. Members of the staff and others have applied for 15,000 ordinary shares, and the balance is now offered for subscription, but application must be for equal amounts of preference and ordinary shares. The firm was established in 1865, and carries on in Cardiff the business of drapers. In 1909 it was converted into a private company, and in 1919 the capital was increased, and presumably it was converted into a public company. Profits are fully set out from 1911. The prospectus states that "the assets, as disclosed by the balance-sheet at February 29, 1920, amount to £449,678 12s 9d, which includes the sum of £26,000 for goodwill, the original sum paid to the executors of the late James Howell on the formation of the company, together with £90,117 11s 10d, the stated value of the freehold and leasehold buildings, which could not be replaced to-day at four times this figure. These will be further increased by the proceeds of this issue." If these assets are net surplus assets, available as security for shares, then shareholders have a substantial margin of assets, but, on the other hand, if these are merely gross assets, then it is difficult to understand the object of their inclusion. In the absence of further information we must refrain from recommending the issue.

Standard Housing Company, Limited.—We reviewed this flotation in the *Economist* for October 16, 1920 (see page 596), when we were not favouraly impressed by the prospectus. The various methods adopted by the promoters to attract investors will be regarded unfavourably by cautious people.

Fletcher Hardware Company, Limited.—Authorised capital £250,000, divided into 100,000 8 per cent. cumulative preference shares of £1 each, of which 55,000 shares have been issued, and 150,000 ordinary shares of £1 each, of which 45,000 have been issued. This is a further issue of 50,000 ordinary and 20,000 preference shares at par. The business was established in 1874, and the prospectus states that it does a widespread export trade in hardware, ironmongery, tools, &c. The head office and works are at Birmingham. Profits are given from 1915. These show the usual trade boom trend, although it should be noticed that the capital was increased in 1915, and again in 1917. Surplus assets are valued at £131,183, and though the issued capital at December 31, 1919, was £72,188, a part of the reserve fund has since been capitalised by issuing

20,363 ordinary shares to holders of ordinary shares. Preference shareholders have limited voting powers. Assets are given as appearing in the balance-sheet, apart from freehold and leasehold land and buildings, which have since been revalued. If these are now valued at to-day's building costs, this would be an unfavourable point for investors to consider. It would have been better, also, if the prospectus had given us a little pre-war financial history.

Kaduna Prospectors, Limited.—Authorised capital £20,000, in shares of 5s each, of which 63,000 have been issued. The company holds six mining leases. Net profits for 13 months ended October 31, 1919, amounted to £4,422, and a dividend of 30 per cent. was paid, less tax. Shares to the amount of £5,293 were issued at 5s premium in December, 1919. Work was commenced in July, 1918, since when the output of tin concentrate is given as 147$\frac{1}{7}$ tons. This announcement is for public information only, and shares are not offered for public subscription. Investors should require further information than is contained in this advertised statement before purchasing shares.

Gaskell and Chambers, Limited.—Authorised capital £100,000, divided into 25,000 6 per cent. cumulative shares of £1 each, and 75,000 ordinary shares of £1 each. Exclusive of the present issue, 22,000 6 per cent. cumulative shares and 28,000 ordinary shares have been issued. This is a further issue of 20,000 ordinary shares at par. The business has been established for about "100 years," and carries on at Birmingham the undertaking of Beer engine manufacturers and general brass founders. The company was registered in 1897. Other undertakings have been acquired, and controlling interests are held in kindred companies in London, Cardiff, and Liverpool. Net assets, after the proceeds of the present issue are taken into consideration, are stated at £79,147, which compares with an issued capital of £70,000. It should be noticed that "goodwill" is lumped together with "fixtures, fittings, machinery, plant, and tools," at £16,922. It would be interesting to know why goodwill is not stated separately. In October, 1920, £7,000, "part of the undivided profits," was capitalised. Profits are given for 1919—one year only—a somewhat brief period considering the business was founded "about 100 years ago." Such reticence as to past results precludes recommendation.

Scarab Oil Burning Company, Limited.—Authorised capital £250,000, divided into 100,000 7 per cent. cumulative participating preference shares of £1 each, and 150,000 ordinary shares of £1 each. The whole of the ordinary capital and 40,000 preference shares have been issued. The company was incorporated in September, 1919, to obtain the patent rights of the Scarab Oil Burner for £130,000, of which £15,000 was payable in cash, and the balance in ordinary shares. These particulars are taken from the advertised statement issued in accordance with Stock Exchange regulation. Before investing, subscribers will want some independent testimony as to the value of the patent.

Blackpool Trocadero, Limited.—Authorised capital £135,000, divided into ordinary shares of £1 each. This is an issue of 85,000 ordinary shares at par. The company has been formed to acquire from Beach Estates, Limited, certain land and buildings, comprising a picture theatre, café, &c., at Blackpool. Independent valuations and a report are submitted, and it is stated that considerable improvements are to be made. Past profits of the old undertaking are not given, but a rosy estimate of future profits is shown. The purchase price has been fixed at £86,000, of which £36,000 is payable in cash. Although the situation of the premises is a favourable point in the prospectus, the issue must be regarded as speculative.

Thomas Smith and Sons (Derby), Limited.—Authorised capital £30,000, divided into 15,000 8 per cent. cumulative participating preference shares, and 15,000 ordinary shares of £1 each. This is an offer of the whole of the capital at par. The advertised abridged prospectus states that the company has been formed to acquire the business of Messrs Thomas Smith and Sons, of Derby, manufacturers of railway carriage reps and laces, &c., and silk throwsters. At the present time the company holds contracts with the leading railway companies of Great Britain and overseas for 12 months ahead. The business has been, it is stated, established for a century. The information offered in the advertised statement is so meagre (for instance, neither past profits nor assets are mentioned) that we must refrain from making any comment until we have seen a copy of the full prospectus.

Jute Industries.—We understand that of the 2,500,000 £1 cumulative participating preference shares in Jute Industries, Limited, offered for sale, over 2,150,000 shares have been taken. After the necessary adjustments have been made with those underwriters who applied for a proportion of their underwriting firm, the remaining underwriters will be called upon to take up 30 per cent.

Mappin and Webb, Limited.—Letters of allotment and regret in respect to the new issue of preference and ordinary shares have been posted.

COMPANY MEETINGS, &c.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

INCREASED RECEIPTS AND EXPENDITURE.

NEED FOR HIGHER RATES.

The sixty-second ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on the 18th instant, at Gresham House, Old Broad street, London, Mr Robert Miller (chairman of the company) presiding.

Sir T. R. Wynne, K.C.S.I., K.C.I.E. (managing director), read the notice convening the meeting.

The Chairman, in moving the adoption of the report, said that the gross earnings for the year were Rs.657 lacs, as compared with Rs.620 lacs in the previous year. Those figures showed that, with the same mileage worked as in 1918-19, the average earnings had increased from Rs.441 to Rs.469 per mile. The number of third-class passengers—the backbone of the coaching traffic—had increased from 16,000,000 to 18,100,000 in 1919-20; the tonnage of goods traffic had increased by half a million tons, and the gross receipts from that source by Rs.11 lacs. In 1918-19 their working expenses were Rs.307 lacs, and in 1919-20 Rs.384 lacs. The general result of working for the year under review showed a satisfactory increase in gross receipts, but on the other hand, they had had to meet a very large increase in working expenses. Stockholders were aware how enormously the cost of living had advanced, and the great rise which had taken place in wages and in the cost of all materials, plant, and rolling stock required for railway purposes. In spite of every endeavour to keep expenditure within the most economical limits, the percentage of working expenses for the year 1919-20 had been 58.54 of the gross earnings, as against 49.01 in the previous year.

INCREASED RATES IMPERATIVE.

With the cost of working increased from causes beyond control, it was reasonable that the rates charged to the public for railway transportation should be increased in India as they had been increased here. Indian railways had been able to make some increase in rates to compensate towards the high cost of working, but the charges they were authorised to make were limited by maxima and minima rates for each kind of goods in a classification laid down by the Government of India. Those rates were fixed many years ago, and the fixing of them was a function pertaining solely to the Government. Under the conditions now existing all over the world as a result of the war, he submitted that the Government of India would find ample justification for a review of the subject of rates. The policy of the Indian railways in the past had been to refrain from exacting to the full the maxima charges which they were entitled to make under the Government classification, but rather to regulate the rates for each commodity on lines calculated to assist in the development of industry and commerce, while at the same time giving the railways a fair return for the services rendered by them.

This policy the railways had held to as far as possible in revising rates within the existing maxima to meet the additional cost of working, but if this policy was to be maintained in the course of the further rise in rates which was necessary to cover the increased cost of working, it was obvious that the existing maxima would have to be reconsidered, and the onus for acting in respect of the raising of the maxima rested on the Government. The existing mileage of the Indian railways was, relatively to the size of the country, extremely small.

NEED FOR ADDITIONAL RAILWAY TRANSPORT.

India itself was now moving rapidly in the direction of industrial development, and to assist this most desirable move additional railway transport was absolutely essential. This would not be forthcoming unless and until the revenues of the existing railways were expanded, so as to counterbalance the great rise in working expenses, and also to give a fair return on the capital invested. It was in the interests of India and its people that the capital invested in these railways should receive a fair dividend, and it was of the highest importance for the development of the country that capitalists should be encouraged to invest in the expansion of the Indian railway system. The Imperial finances were largely interested in the prosperity of the Indian railways, as the railways contributed in surplus profits a sum so considerable as to be exceeded only by that derived from land revenue. It was therefore as much for the benefit of the taxpayer, as he had already tried to show it to be in the interests of commerce, that the rates charged for railway transportation should be effectually remunerative, otherwise additional taxation would be inevitable.

QUESTION OF DEVELOPMENT.

Having shown, by an analysis of the figures of the railways as a whole from 1881 onwards, how the production and movement of goods had grown with the increase of railway mileage, the Chairman said that, as far as the Bengal-Nagpur Railway was concerned, the demands on it to expand its system to meet the development of industry and commerce were large. They would grow and they should be met, as it was the duty of a railway to provide for all the traffic which was offered to it. This railway served a great coal and mineral area of India. On its system were situated the Tata Iron and Steel Works, which were the only steel works at present in India producing steel. The production of steel in India was in its infancy, and in the opinion of the board India would eventually become one of the largest steel-producing countries in the world.

A new steel company was about to be established on this company's railway system, and schemes for other installations were being matured, while an immense new coalfield, called Karanpura, was about to be opened up by the extension of the Ramgarh-Bokharo branch into it. These and other developments would necessitate extensions of the railway system, and the Bengal-Nagpur had, in fact, an immense field for development before it in directions which would largely increase the trade and commerce and prosperity of India, and be beneficial to the earning capacity of the railway itself.

CAPITAL REQUIREMENTS.

The difficulty before them was how all the capital required for this development was to be provided. At present their capital requirements were met by the Government of India out of the yearly sum they were able to provide under what was called the railway programme, and with the growing demands for railway equipment and extensions in India, the annual amount of capital available was nothing like sufficient to meet the requirements of the Indian railway system. It seemed, therefore, that the Government of India, in order to meet these demands, must presently adopt methods for raising capital other than those which they had followed in the past—methods much more in accordance with modern financial conditions and unhampered by the traditions of finance which, up to the present, had been rigidly, and no doubt wisely, adhered to. This question of the future financing of the railways of India was, he was glad to say, about to be thoroughly inquired into by the Railway Commission which was proceeding to India this winter, one of the terms of reference being :—"To consider the arrangements for the financing of railways in India, and particularly the feasibility of the greater utilisation of private enterprise and capital for the construction of new lines."

PRIVATE ENTERPRISE.

With regard to private enterprise, there was a very considerable field to work in within certain limits. Additional main trunk lines were not required in India, and to construct more of them would be seriously to affect the old-established routes and be beneficial only for export trade. What was really wanted was the development of the areas through which each individual railway ran, and for this purpose private enterprise was very well suited. Up to the time of the war a not inconsiderable mileage of feeder lines was constructed under what were called the branch line terms of the Government of India, but these terms were now insufficient, and better terms must be given if there was to be real progress. It seemed, therefore, that the first thing to do was to bring these branch line terms up to date. Indian railway companies were, in his opinion, one of the best investments in the world. The railways had been soundly and economically constructed, and expenditure on capital and on revenue account was carefully controlled both by the Government and by the home boards. India was de-

veloping rapidly its trade and industries, and this meant more demand for transport facilities.

PROSPECTS.

The future of the Bengal-Nagpur Railway was a great one, and they could not yet see the end of the new traffic which was waiting only for the company to give it facilities. He could not help thinking that investors in Indian securities allowed themselves to be influenced by the Indian political situation to a degree not justified by the facts. There was no need for alarm about the future of India. The people were born traders, and as such would realise that, in order to attract capital to Indian railways, a fair rate of interest was indispensable, and that unless the charges made to the public for railway transportation were sufficient to maintain the lines in a high state of efficiency, and also to provide a reasonable dividend to the investor in railway stocks, the standard of maintenance and working must deteriorate, and the trade and commerce of the country would be adversely affected thereby.

Sir Charles Stewart-Wilson, K.C.I.E., seconded the resolution, which was carried unanimously.

IMPERIAL OTTOMAN BANK.

SATISFACTORY RESULTS OF THE YEAR.

CONDITIONS AND PROSPECTS IN TURKEY.

A general meeting of shareholders of the Imperial Ottoman Bank was held, on the 17th instant, at Winchester House, Old Broad street, London, E.C., the Earl of Bessborough, K.P., C.V.O., C.B., presiding.

The secretary (Mr Charles E. L. Corthorn) read the notice convening the meeting.

The Chairman said: Ladies and gentlemen, I have been informed by the tellers that this meeting is properly constituted. I may add that we hold proxies for just over 167,000 shares, or 2,400 votes.

I presume that it will be your pleasure that the report and accounts, which have been printed and circulated, should be taken as read.

Before proceeding to refer to business affairs, I must point out to you with the deepest regret the loss which your committee have sustained since the last general meeting in the death of Baron Hottinguer, a participator in the foundation of the bank whose connection with the committee in Paris, of which he was president for so many years, dated back to 1866. During this long period his sound judgment and great capacity were unspairingly devoted to the bank's interest.

CONDITIONS IN TURKEY.

At the outset I think it is my duty to say that in the abnormal condition of affairs now existing, and in the absence of reliable statistics, I am prevented from referring in detail to the general trade operations and outlook in Turkey, as has been the custom in years gone by.

Before turning to the balance-sheet to December 31, 1919, I would refer briefly to the conditions under which we have been working since our last meeting.

The delay in the peace negotiations and the uncertainty of Turkey's future have had a profound effect on the economic situation of the country. The various political changes at Constantinople, and, later, the Anatolian disturbances with the consequent military intervention were also adverse factors.

The harvest of 1919, however, on the whole was good, although the difficulties of transport restricted exports which are so necessary to any improvement in the Turkish exchange.

Imports have, however, been considerable, both for the needs of the country and the establishment of stocks, and were largely centred in the warehouses at Constantinople with a view to re-export to Russia.

The closing of the Russian and Anatolian markets, however, caused much congestion and consequent commercial embarrassment.

In the districts free from disturbances taxes have been received regularly and in increased amounts, but, owing to the depreciation of currency, they remain insufficient to meet the foreign obligations for the payment of which they are hypothecated.

Now that the Treaty of Peace has been signed and, pending the definitive appointment of the Financial Commission stipulated therein, a provisional controlling Commission instituted, it is to be hoped, that preliminary measures of reorganisation of the Turkish finances will shortly be adopted until such time as the fiscal laws have been reformed.

INCREASE IN THE VOLUME OF THE BANK'S COMMERCIAL OPERATIONS.

The period covered by the report and balance-sheet now placed before you witnessed a considerable increase in the volume of our commercial operations in spite of the political disturbance which existed and unfortunately still continues to exist in Turkey. The activities of many of our branches have been curtailed, particularly in the interior of Anatolia, which is entirely cut off from direct communication with Constantinople, and in some cases there it has been necessary to close the branch entirely for the time being.

I would observe, in this connection, we have to record with deep regret that two members of our staff at Bolou were included among the victims of a massacre.

In face of these difficulties and dangers the staff has loyally held on and continued to discharge its duties.

The policy of the committee, which has been directed to the development of commercial business, proved, we think, fully satisfactory.

SATISFACTORY RESULTS.

Taking into consideration the disturbed state of Turkey to which I have referred above, and the general condition of affairs in the commercial and financial world, we feel that the result shown in the balance-sheet before you is highly satisfactory.

It must be quite obvious to all that the accounts are heavily affected by the depreciation in the Turkish pound and the franc in comparison with sterling.

The committee feel justified in asking you to appreciate the foresight with which, since the period of the Balkan War, they anticipated difficulties in Turkey and consequently arranged accordingly the distribution of the bank's funds. Had this precaution not been taken, and had we allowed a large surplus of funds to remain in Turkey, the resulting shrinkage in conversion to sterling, in which currency the accounts of the bank have to be presented, would have been extremely serious.

DEPRECIATION OF THE TURKISH POUND.

The decline in the sterling value of the franc to the extent which has occurred, even if it had been foreseen, could not have been similarly provided for.

Before the war the exchanges were stable at about 110 piastres and 25 francs respectively to the £ sterling.

As an outcome of war and its aftermath currencies generally have been subject to violent fluctuations, and in the case of the Turkish pound and the franc have experienced unprecedented depreciation in relation to sterling.

At December 31, 1919, the exchange rates ruling were 370 piastres and 41 francs to the £ sterling, and these were the rates applied for the purpose of the balance-sheet now presented to you.

BALANCE TO CREDIT OF PROFIT AND LOSS.

The balance standing to the credit of the profit and loss account is £206,404 14s 10d, which, in view of the unsettled condition of affairs in Anatolia and elsewhere and the uncertain condition of the exchanges, we propose to carry forward to the current year.

Since the date of this balance-sheet, as you are aware, there has been a further heavy depreciation in the sterling value of the Turkish pound and the franc, which causes a diminution of the sterling valuation for the balance-sheet figures, especially in that part of our assets which are at present in francs. The making of a provision for this diminution will absorb the carry-forward and even part of the statutory reserve, but it is to be hoped that this low value of the franc is only temporary.

CHANGES IN THE COMMITTEE.

As you will have observed from the report, several changes have taken place in the committee.

In the first place, you are asked to confirm the election to the committee in Paris of M. Henri Hottinguer, to succeed the late Baron Hottinguer.

In the second place, we have to note with great regret that Messieurs le Comte A. de Germiny and P. Naville, two of our oldest and most valued colleagues, have retired.

These two vacancies have been refilled by the election to the committee in Paris of Messieurs H. Finlay and A. Berthelot, respectively of the Banque de Paris et des Pays-Bas and the Banque Industrielle de Chine, two institutions with which we are on terms of close and friendly collaboration.

Elections to the vacancies on the committee in London have also to be confirmed, *i.e.*, Lord Hillingdon, Lt.-Col. Sir Albert Stern, and Sir W. Guy Granet.

The huge increase in the cost of living in Turkey and the Near East has necessitated our allowing further increases of salary to our staff.

SERVICES OF MR NIAS.

To Mr Nias, our late director-general, who continued to discharge the functions of director-general until the end of 1919, we wish to record our gratitude for the distinguished services which he rendered to the bank in the course of the eighteen years during which he devoted himself to the furtherance of its interests.

In conclusion, I would add that our more recent expansion has been in the opening of an office in the Aschar district of Basra, as well as a branch at Kermanshah, which we are of opinion will assist in the development of our business in Mesopotamia. There, so elsewhere, we are devoting every energy to the assistance of trade development, and the offices more or less especially organised

for this business, such as Manchester, London, Marseilles, Tunis, Egypt, Bagdad, and Basra, are displaying most energetic efforts in assisting various trades, and the results should be satisfactory both to trade and the shareholders.

GRATIFYING RESULTS FOR THE CURRENT YEAR.

Speaking at this time of year, I think that you will be interested to know that the working results attained for the first six months of the current year have been gratifying. We think this will be satisfactory to the shareholders, considering the difficult period through which we have been and are passing, and will justify the cautious policy adopted by the committee.

I cannot sit down without asking you to join with me in heartily thanking our management and staff at home and abroad for the devotion which they have shown to the interests of the bank in face of so many difficulties and increased volume of work during recent years.

In conclusion, I have to move the adoption of the report and accounts.

Viscount Goschen seconded the resolution, which was carried unanimously.

The retiring members of the London General Committee were reappointed, and the attendance fees duly fixed. A vote of thanks terminated the meeting.

DALGETY AND COMPANY, LIMITED.

SPLENDID RESULTS OF THE YEAR'S TRADING.

CONDITIONS IN AUSTRALIA AND NEW ZEALAND.

The thirty-sixth annual general meeting of the shareholders of Dalgety and Co., Limited, was held on the 19th instant, at the offices, 45 Bishopsgate, London, Sir Lionel Fletcher (acting chairman of the company) presiding.

The secretary (Mr H. E. Davison) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: I think I am justified in congratulating our shareholders upon the balance-sheet that the directors are able to lay before them to-day. Especially is this the case when it is remembered that the past year has imposed upon us its own specially heavy financial obligations which have had to be met out of earnings, and which have been additional to the ordinary working expenses and the burdensome taxation attaching to such a widespread business as ours. The first of these abnormal outgoings has arisen from the enormous increase in the cost of living. In view of this, your directors were sure they would have your sympathy and support in any action they felt justified in taking to assist the staff of the company in meeting the altered conditions, and before acting upon this assurance the chairman and the general manager went thoroughly into the matter here and at the company's branches throughout Australia and New Zealand. In this way they had the additional advantage of being able to ensure that our company, in accordance with its traditions, did not lag behind kindred institutions in its treatment of an energetic and loyal staff.

While on this subject I take the opportunity of expressing on behalf of the board of directors their high appreciation of the intelligent and whole-hearted devotion to the company's interests which has been displayed throughout the service, often under trying and difficult conditions. We fully realise that the ablest of directors and management cannot produce such results as we are able to place before you to-day without the hearty co-operation of their staffs, and I am very pleased to make this recognition of their services. The effect of the above expenditure will be more definitely alluded to later on in my analysis of the chief items in the accounts. I may, however, refer at this stage to what has been by far the heaviest special call upon the profits of the year—namely, the provision that has had to be made, following our established custom in such circumstances, for the heavy fall in values of our reserve fund and other investments. Although, as you are aware, we have invariably written off any depreciation as it occurred, and have kept the book value of our reserve fund and investment stocks at their safe market value at the close of our financial year, it has been found necesssary on this occasion to write off a net sum of no less than £111,497.

At the date of our last annual meeting the season in Australia was distinctly unfavourable, and as the months went by without any general fall of rain, the situation grew worse, and losses of stock became increasingly serious. However, the outlook has now been quite transformed, owing to several copious and general falls of rain all over Australia, and prospects in all the States are at present highly satisfactory. At the same time it must be remembered that the effects of the drought still exist in the heavy decrease in the flocks and herds, and a serious reduction in the woolclip, and that the process of recovery will not be immediate but must be a gradual one.

New Zealand has had a better season than in 1918-1919, and the outlook for all the staple products of the Dominion is quite satisfactory so far as quantity is concerned, but the market prospects for the wool clip are decidedly disappointing at the moment.

BRITISH GOVERNMENT AND THE WOOL CLIP.

The scheme under which the British Government purchased the Australian and New Zealand wool clips, beginning with that of 1916-1917, terminated on June 30th last, and the old method of sale of the wool has now been resumed. Unfortunately, the market is seriously handicapped in the first place by the heavy unsold Government stocks of old wool, amounting to not less than 2,500,000 bales, and in the second place by the absence of demand for certain classes, notably coarse and inferior qualities. The result will be a slower realisation of the clip and a less satisfactory return than we have been accustomed to for some years past, and there seems no prospect of any substantial relief in this respect until conditions in Central and Eastern Europe are more settled, and business and financial arrangements can be made to enable the enormous wool-using population of those countries to obtain the supplies of which they are so sadly in need. When this state of things comes about, the liquidation of the unsold Government stocks—now a slow and dragging process—will be greatly helped and expedited, and in the meantime it is in capable hands, and everything possible is being done in the interests of all concerned.

The fact that any serious check should exist to the sale of our chief product naturally gives your board and management some cause for anxiety, but when the article in question is one which the whole world wants, and the production of which is, under ordinary conditions, hardly equal to the demand, it can be only a matter of time before the present difficulty passes away.

Meanwhile, the future holds out the promise of substantial compensation, through the medium of the wheat crop, the prospects for which at this stage could hardly be more satisfactory. Should these prospects materialise at harvest time, the money return to Australia at current market values will be enormous, and far in excess of anything hitherto realised by the Commonwealth from this source. Estimates of the value of the coming wheat crop to Australia have reached as high a sum as one hundred millions sterling, and even a good deal less than this would mean a prosperous year to that country, and in this our company would naturally share.

QUEENSLAND PASTORAL LEASES LEGISLATION.

While our desire is to avoid any political references at these meetings, it is hardly possible to deal with the affairs of a company holding so large a stake in Australia as Dalgety and Co. do, without alluding to such legislation as that enacted by the Government of Queensland in connection with their pastoral leases. Your chairman mentioned at our meeting in 1918 that an attempt was being made to alter the conditions under which these leases had been granted, and to take the power to impose a heavier rental than the one originally agreed upon, and he pointed out that such action on the part of the Queensland Government would constitute a gross breach of contract if carried into effect, and would inevitably react most prejudicially upon the credit of Queensland. I regret to say that the repudiatory legislation referred to has now been made law, having been forced through the Queensland Upper House by the aid of 14 new members and supporters of the Government who were specially appointed with the above object in view. The natural result has quickly followed, and the credit of Queensland has, unfortunately, suffered to an extent for which the revenue arising from the increased rents now being imposed, will never compensate.

You were informed at our last annual meeting of the sale of the company's Bishopsgate premises and the purchase of a freehold site in Crosby square, with the intention of erecting suitable offices thereon. I regret to say that, owing to a variety of causes, we have been unable to make any appreciable progress in the way of building. However, we believe we can now see the end of these troubles, and expect that building operations will be in full swing early in the New Year.

OUTLOOK FOR THE FUTURE.

At this stage I deem it my duty to sound a note of warning with regard to the future. Our earnings during the past year have been easily a record, as a result, broadly speaking, of the high prices of the varied commodities which are handled by our many-sided business. To-day, however, the outlook is very different from what it was a year ago. Now the tendency of prices is, for the most part, distinctly downwards, a movement which is intensified by the world-wide financial stringency and general unsettlement, while the realisation of our staple products is sometimes difficult, and occasionally almost impossible, for the moment. For these reasons caution dictates that we should prepare for a lower standard of earnings, and if the present conditions should pass away sooner than seems likely at present, and it should fortunately prove to be the case that we have been unduly pessimistic, so much the better. However, come what may, you can safely rely that Dalgety and

Co. will maintain its relative position in the commercial and financial world, and it may happen that any reduction in earnings will be largely compensated by smaller figures on the debit side of the ledger.

PASTORAL CONDITIONS IN AUSTRALIA AND NEW ZEALAND.

I will pass on to the latest report as to pastoral and agricultural conditions and prospects in Australia and New Zealand. Our latest cable advices state that pastoral prospects are particularly good all over Queensland, where the fly trouble has somewhat abated, and good throughout the rest of Australia, except in the Upper Murchison District of Western Australia, where dry conditions still prevail. It is estimated that, as a result of the recent drought, the present season's Australian wool clip will be about 16 per cent. less than that of 1918-19. The agricultural outlook is excellent in New South Wales and Victoria, and good elsewhere, and substantial exportable surpluses of cereals may be looked for from Victoria, New South Wales, and South Australia. The dairying districts of Queensland are experiencing an excellent season, while conditions are good in New South Wales, and prospects promising in Victoria. A largely increased production as compared with last year is forecasted, especially in Queensland and South Australia.

New Zealand has had an open winter and a wet spring, which has assured an abundance of food for stock, which are fetching high prices. The lambing has been well up to the average. The outlook for the frozen meat, dairying, and agricultural industries is good, but for wool the prospects generally are unfavourable. A good demand continues for dairying and agricultural land, but there is less inquiry for pastoral properties, though up to the present values have not receded.

Mr Stephen Fairbairn seconded the adoption of the report and accounts, and it was carried unanimously.

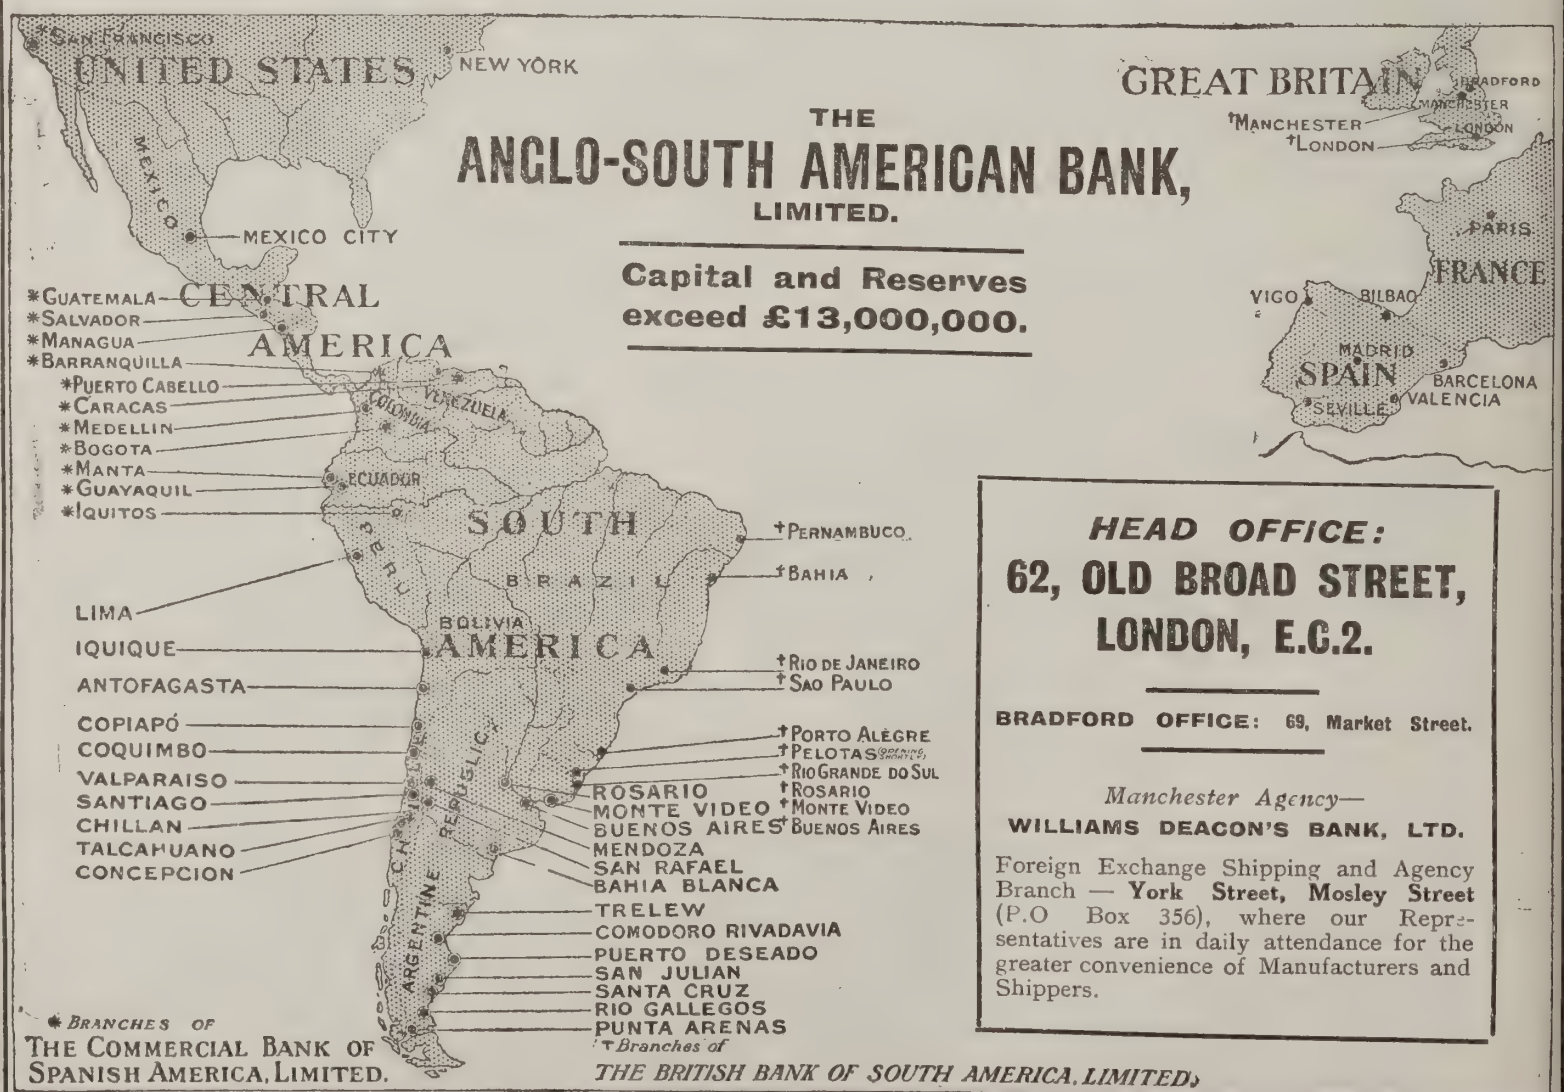
The retiring directors and auditors were re-elected, and a vote of thanks accorded to the chairman, directors, and staff.

WARING AND GILLOW, LIMITED.

SATISFACTORY RESULTS—INJUSTICE OF E.P.D.

The ordinary general meeting of the shareholders of Waring and Gillow, Limited, was held, on the 16th instant, at the company's premises, 164-180 Oxford street, London. Mr William J. Jennings presided.

The secretary (Mr Joseph Ritson) read the notice convening the meeting and the auditors' report.



The Chairman, in moving the adoption of the report and accounts, said: I think you will agree with the directors that the balance of profit, amounting to £194,992, after charging amortisation of leases, directors' and auditors' fees and trustees' remuneration, subject, of course, to Excess Profits Duty—as to which I shall subsequently say a word or two—and corporation tax, is a very satisfactory figure, having regard to the difficult period covered by the accounts, a period marked by the changing over from the production of articles needed by the Government for the prosecution of the war to the ordinary requirements of our clientèle in time of peace. This figure compares with the figure of £1,194,233 for the three years to January 31, 1919, or an average of £398,078. One has but to remind you that for the year ending January 31, 1915, our profits were £35,216, and for the year ending January 31, 1916, £100,884, as compared with the figure of £194,992 to-day—and these are the true figures for comparison—to realise how far the company has progressed.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, the cash at bank, in hand, on deposit, and investments in War Loan as at January 31st last, £99,054, compares with the previous year of £372,698, a difference more than accounted for by payments during the year on account of Excess Profits Duty. Our book debts and debit balances show a very large increase as compared with last year—viz., £1,222,410, as against £577,114. This difference is due, apart from payment on account of Excess Profits Duty, to the increased book debts which

naturally follow an expansion of business. From inquiries which have reached us, it has been suggested that a considerable proportion of this large sum may not be sound. Let me assure the shareholders in the most unequivocal manner possible that the directors are satisfied that ample provision has been made for all bad and doubtful debts. The stocks-in-trade and works in progress show, as you would naturally expect, a large diminution, the figures being £821,437, as against £1,681,583. This difference is attributable to the termination of war work. The investments in and amounts due on current accounts by subsidiary companies show a diminution of £106,330, the figures to-day being £715,989, as compared with £822,319. The freehold and leasehold properties show an increase of £206,000, the sum to-day standing at £407,774, as against £201,449 last year, an increase entirely made up of expenditure upon our factories and other properties, and in the acquisition of properties in Bold Street, Liverpool, occupied by the Pioneer Stores, property formerly occupied by Ridgways at the corner of Titchfield street and Oxford street, also property in Winsley street and Castle street, generally known as the old Princess's Theatre. Of the liabilities, the first mortgage debentures stand at £447,360, as against £466,710 last year; the rapidity with which these debentures are being redeemed is highly satisfactory.

E.P.D.

The really important question before the directors—one which has caused them the greatest concern—is the incidence of that crippling tax, the Excess Profits Duty. It is a matter intimately bound up with the payment of dividends. When we met you last year there was a general feeling in industrial circles that this tax, which was understood to be a purely war tax, would be removed entirely. Certainly, few people thought it would be increased, and I then ventured to suggest, but without making any definite promise, that assuming trade continued to improve, as in fact it has done, and the tax were removed, or even not increased, the board hoped to be in a position to pay off the arrears of dividend on the preference shares. We also hoped that before we met the shareholders again we should have disposed of all outstanding questions with the taxing authorities. In both these matters we have unfortunately been disappointed.

It has repeatedly been explained that this tax hits with special severity companies such as ours with no pre-war standard of profit. When the company was reconstructed in 1912 it was thought that an excellent thing had been done by reducing and rearranging the capital; as events have turned out, this has proved extremely disadvantageous.

The directors have considered very carefully the recommendation they ought to make to the shareholders in the circumstances. They are bound to have regard to the stringent financial conditions existing, and to the fact that agreement has not yet been reached with the authorities, and they feel that they would not be acting in the best interests of the company by recommending the payment of a dividend. They regard it as essential to husband the cash resources of the company, and to carry forward the balance as shown in the accounts, and, in their own interests, we hope that the shareholders will endorse our view.

In conclusion, the Chairman sympathetically referred to the death of Mr James E. Waring, one of the directors of the company, and announced that Mr Harold Waring had been elected to fill the vacancy on the board.

Mr H. W. Weaving seconded the motion, which was carried unanimously, after the Chairman had replied to various questions.

BERANANG (SELANGOR) RUBBER PLANTATIONS, LIMITED.

SATISFACTORY RESULTS.

The tenth ordinary general meeting of the Beranang (Selangor) Rubber Plantations, Limited, was held, on the 15th instant, in the Council Chamber of the Rubber Growers' Association, 38 Eastcheap, London, Mr E. G. Money presiding.

The representative of the secretaries (Messrs Boustead Brothers) read the notice and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that, generally speaking, the results of the year's working might be considered satisfactory. They were gradually extending the acreage under cultivation. In 1919 they added 85 acres, bringing the total to 1,132 acres, and at the present time they were about to plant up a further 98 acres. The directors recommended the payment of the usual 10 per cent. dividend on the preference shares, together with the proportion of the surplus profits due to those shares, and the payment of 10 per cent. on the ordinary shares, leaving £958 to be carried forward. It might have been said, perhaps, that in the present condition of the industry it would have been more prudent not to distribute as much of the company's money, but, on the other hand, the directors considered that this distribution was justified by the cash resources of the company and by a survey of the position as it was likely to be, even assuming the present slump in rubber continued during the present year. They considered themselves to be in a position to work the estate even at the very low price of 1s per lb for rubber, so as, very nearly at any rate, to cover production expenses; and as to the additional expenditure represented by outlay on improvements and development in hand, they had cash enough to provide for that. Unless, therefore, anything very unforeseen and very much worse than at present existed should arise, he thought he might say there were no grounds for any anxiety. The Rubber Growers' Association had formulated a restriction of output scheme, but some little time must elapse before its effect could be felt. There was some difference of opinion among those engaged in the industry as to whether this scheme went quite far enough, or whether it would not have been better to have invoked the assistance of the Governments of the Malay States, and, if possible, of the Dutch colonies, in making such a scheme compulsory. In further remarks, the Chairman referred to a scheme which the directors had under consideration with a view to the conversion of the preference shares of the company into ordinary shares. The arrangements, he added, were well advanced for placing proposals before both classes of shareholders.

Mr W. R. Davies seconded the motion, which was carried unanimously, and the dividends recommended were declared.

ANGLO-UNITED OILFIELDS, LIMITED.

SATISFACTORY CONDITION OF COMPANY'S AFFAIRS.

The first ordinary general meeting of the Anglo-United Oilfields, Limited, was held, on the 19th instant, at Winchester House, Old Broad street, London, Sir Trevredyn R. Wynne presiding.

The Chairman said their affairs were in a satisfactory condition. They were informed that they had made a profit for the six months from April to the end of December of close on $40,000, without deducting depreciation and taxation. That figure of profit was based on the actual amounts received from the Riverton Refinery, to whom they had sold their oil, and was exclusive of the value of the oil on hand. When they first commenced producing oil in April they had made a contract with the Riverton Refinery Company for the sale to them of 60,000 barrels of oil at a price 40 per cent. above that ruling when the company was formed. Mr Campbell Hunter, their consulting engineer, had been able when in the United States to rearrange that contract on a higher basis as from September 1, 1920. The new price would still further be increased under a sliding scale so soon as their deliveries of oil increased in tonnage and the sale price of Oklahoma oil rose. From September 1st they were receiving a minimum of 60 per cent. over the price per barrel a year ago, with the certainty of a further rise as they increased their output, and should the market price of Oklahoma oil rise. The total output of crude oil from the property up to the end of September was 49,297 barrels, of which 40,360 had been delivered to the refinery by the end of that month. Their deliveries during August were 33,310 barrels, and during September 7,050 barrels at the new price. By the end of August they had delivered 33,310 barrels out of the 60,000 barrels which they had contracted to deliver under the original agreement and price. With regard to finances, they had remitted £35,000 to America, and a further £22,500 for the purchase of the Wyopo Pipe Line. As those sums exceeded the cash at their disposal, the directors and their friends had guaranteed a further £20,000, most of which had been called up. They were, therefore, in the position that they had established a good working organisation at the fields, and were producing oil from all the wells in operation at a good profit. They had with the capital originally

provided brought their oilfield into commercial production. They owned and controlled the only means of transport from the oilfields to the railway. What they had now to do was to increase their receipts by rapidly drilling new wells and increasing their output. For that purpose they proposed to increase the capital from £225,000 to £350,000. The directors had great confidence in the success of the company.

Mr Campbell Hunter said that he was not often in a position to give such a good record of what had been done, especially in the first year of a company's existence, and he urged the shareholders to provide the capital asked for.

The retiring directors and auditors were re-elected, and the meeting was adjourned.

At a subsequent extraordinary general meeting the proposed increase of capital was unanimously sanctioned.

(a) Maximum fiduciary issue for 1920 fixed at £320,600,000.
* Includes notes called in, but not yet cancelled.

A POLICY IN THE

Scottish Provident Institution,

owing to the very MODERATE RATE OF PREMIUM, is the ideal method of providing for

DEATH DUTIES,

particularly in view of the **Abatement of Income Tax** allowed in respect of PREMIUMS PAID.

Example: Age 40 next Birthday.

The Annual Premium limited to 25 Payments to assure **£2,500,** payable at death, to provide Estate Duty of that amount would be ... £82 7 11
Less rebate of Income Tax (at 3s. per £) ... 12 7 2

Making Net Annual Outlay £70 0 9

MAXIMUM Amount of Premiums payable, £1,751
MINIMUM Sum Assured Payable, £2,500

HEAD OFFICE: 6 St. Andrew Square, Edinburgh.
LONDON: 3 Lombard St., E.C.3. WEST END: 17 Pall Mall, S.W.1.

Accumulated Funds - - £16,250,000

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ¼% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3⅝% on Oct. 6, 1919, to 4½% on Nov. 6, 1919, and 5½% on April 15, 1920.
* Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Messrs Samuel Montagu and Co. write as follows on November 18th:—"Gold: The Bank of England gold reserve against its note issue is £121,971,835, an increase of £231,430 as compared with last week. The small amount of gold that came on offer this week was taken for New York. It is reported from New York that $3,402,000 and $1,000,000 in gold have arrived in the U.S.A. from London and Australia respectively, while a further $12,650,000 in gold is said to be on the way from London. It is reported that the Bank of England has bought a quantity of imported gold at 77s 9d the standard ounce. This is news of some importance. Silver: The market has been inert since we last addressed you. The China exchanges—corresponding with the lack of any activity in export business from that country—have been retrograde, and silver therefore has not been in much request on Far Eastern account. The Indian bazzars have been inclined to make bear sales. Supplies from the Continent have not been large: had they been at all free, the movement of prices downward would have been much more pronounced. We cannot regard the market as healthy, especially as there has been some selling here on China account; for, as we have indicated in a recent letter, the present and the near future of the silver market depend more than anything else upon the attitude of China. The difference between the quotations for domestic and foreign-mined silver in the U.S.A. is not without significance. Falling world commodity prices and rumours of financial difficulties in the very countries which have largely profited by the war do not encourage confidence in silver, which is also a commodity the value of which was unduly enhanced by the late world crisis. Under date of October 21st last, the Bombay market was reported to be "practically bare of English silver, as all such silver has lately been exported to London and Japan." The ready price was then 116 rupees, and the forward price 111 rupees, that is to say, both quotations showed a premium on the melting value of a full weight rupee, 108 7/8 rupees per 100 talas. Melted coin or jewellery probably compose the supplies of the Indian market failing imported fine silver, which usually formed the basis of the bazaar quotations. Chile has accepted a tender for the minting in Paris of nickel 5, 10, and 20 centaves coins. We are informed that this new money has been rendered necessary by the melting down of all old coin containing silver. This replacement of silver by nickel in an American silver-producing country is well worth notice. Mexican papers state that the Mint was taking advantage of the reduced value of silver to coin at the rate of about 180,000 pesos a day (which works out at about 24,000,000 ounces per annum). The proportion, therefore, thus utilised would appear, then, to have been about one-third of the production. A main object of this large mintage was to satisfy the miners, who insist on payment in silver pesos, and recognise no other form of currency. The miners obviously have in this respect the power to secure compliance with their wishes.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Oct. 22, 1920.	Oct. 31, 1920.	Nov. 7, 1920.

MOUNT MORGAN.—Cable:—"For four weeks ended November 14th treated 7,863 tons Mount Morgan ore, 1,294 tons Many Peaks ore, 5,864 tons concentrates and 7 tons of purchased ore and secondary products; produced 530 tons blister copper, containing 523 tons copper and 7,552 ozs gold, including 18 tons copper and 17 ozs gold from Many Peaks, also 1 ton of copper and 1 oz gold from purchased ore and secondary products. Concentrator treated 17,194 tons ore for a production of 6,456 tons of concentrates, containing 334 tons copper and 4,764 ozs gold. In addition, have matte on hand, containing 11 tons copper and 143 ozs gold."

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

AFRICAN LAKES CORPORATION.—A dividend at rate of 10 per cent. per annum and bonus of 1s per share of 19s called up; 10s will be retained to make the 175,000 "A" shares fully paid.

(a) Increased capital.

Reports and Notices.

Mr E. J. Holland, J.P., has been appointed a director of the General Life Assurance Company, to fill the vacancy caused by the resignation of Mr H. McKinnon Wood.

GOVERNMENT STOCKS, &c.

LIBERIAN GOLD LOAN OF 1913.—The Council of Foreign Bondholders are informed that a telegram has been received from His Majesty's Acting Consul-General at Monrovia announcing that on the 8th instant the Receiver-General of the Liberian Customs sent by post the sum of £8,000 to the fiscal agents in London for the service of the loan.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the November instalment of the debt service in accordance with the arrangement of May 25, 1912.

RAILWAYS.

ARGENTINE GREAT WESTERN RAILWAY.—The report for the year ended June 30, 1920, states that the following amounts have been received and distributed from the B.A. and Pacific Company:—Interest on first debenture stock, £68,000; second debenture stock, £68,000; 5 per cent. debenture stock, £180,000; interim dividend of 2½ per cent. on preferred and ordinary stocks, £106,250; and from a further £106,250 received the directors propose to pay balance dividend of 2½ per cent. on preferred and ordinary stocks, making 5 per cent. for the year. Traffics showed an increase of 403,477 (19.10 per cent.) in passengers, 18,975 (1.26 per cent.) tons increase in goods and live stock, and 5,666 (8.39 per cent.) tons increase in cereals.

"No Library Complete without Hartley Withers Complete."

Every Business Man should have in his library Mr. Hartley Withers's New Book

THE CASE FOR CAPITALISM

BY

HARTLEY WITHERS

Author of "Stocks and Shares," "The Meaning of Money," etc.

Times:—"Mr. Withers has won the right to speak on economic and social topics by virtue of an amount of practical experience which is rare among literary men."

Spectator:—"Mr. Hartley Withers shows that the case is overwhelmingly strong when it is fairly stated."

Daily Mail:—"'The Case for Capitalism' is an able and popular statement of argument which should be in all hands."

Harold Cox in *The Sunday Times*:—"Such a book is of special value at the present moment, for revolutionary propaganda, based upon socialist fictions, is now rapidly spreading."

BANKS.

ANGLO-EGYPTIAN BANK.—The report for the year ended August 31, 1920, shows that gross profits, after making full provision for all bad and doubtful debts and all taxation, are £398,142, and deducting expenses, there remains £133,406 net profit, and £40,000 was brought forward. Directors propose placing to staff provident fund £5,483, dividend of 10s per share (making 15 per cent. for year), and bonus of 2s 6d per share, both tax free, reserve account new premises £12,923, carrying forward £50,000. Since last meeting the bank has become affiliated to Barclays Bank by the purchase by the latter institution of over 100,000 of the 120,000 shares existing.

RUBBER, &c.

ANGLO-SUMATRA RUBBER.—The report for the year ended May 31st states that the net profit, after providing for depreciation and all administrative expenses was £38,757, which with £1,802 brought forward and excess profits duty recovered, £11,669, makes £52,227. The final dividend is 15 per cent., less tax (making 30 per cent., less tax, for the year), and transfer to reserve £5,000, leaving, subject to excess profits duty and corporation profits tax, £24,034. The crop of rubber obtained was 1,058,736 lbs, as against an estimate of 850,000 lbs. Cost was approximately 1s 0½d per pound f.o.b. Rubber sold realised average gross price of 2s per pound.

REDUCTION OF RUBBER OUTPUT IN NETHERLANDS INDIES.—An intimation has been received from the International Association for Rubber Cultivation in the Netherlands Indies that over 70 per cent. of the producing area owned by members of that association have agreed to the proposals for a 25 per cent. reduction of output.

MISCELLANEOUS.

CARGO FLEET IRON.—The profits for the year ended September 30, 1919 (after making provision for estimated liabilities to the Government), amounted to £215,940, and £47,665 was brought forward. Debenture interest absorbed £43,148. The directors propose placing to dividend of 5 per cent., less tax (paid), £50,000; to depreciation, £75,000; to reserve, £50,000; carrying forward £45,458. During the year £18,400 4½ per cent. first debentures have been cancelled, anticipating to the extent of £1,700 the annual redemption for 1921. The directors are of opinion that the profits for the year ended September 30, 1920, allow of a dividend of 5 per cent., less tax, payable December 31st to shareholders registered December 4th.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Agricultural operations have made good progress under a spell of fine open weather, which has facilitated the sowing of autumn crops and also enabled farmers to harvest late cereals in good condition. A large area has already been sown under winter wheat and oats, and plants above ground appear very healthy. Offerings of native wheat here were on a limited scale, and good-conditioned

samples realised the maximum price of 96s per qr 504 lbs delivered. At other chief distributing centres, however, liberal quantities were available. No change occurred in official quotations of imported, and there was only a limited business passing, chiefly in North American grades. Crop reports from Argentina continue favourable, and first samples of the new wheat show good quality. Australian prospects are maintained, though reports speak of heavy rains in the South. Flour remains quietly steady at 86s for G.R. per sack ex mill, and imported 81s 9d to 93s, according to quality, per 280 lbs, ex store. Maize dull, and easier on lower c.i.f. offers. Plate, ex ship, 56s; ditto, landed, 57s 6d per 480 lbs. In the forward market considerable irregularity prevailed, with prices easier on balance owing to selling pressure and large offerings of American mixed at reduced rates, while very liberal quantities on passage from Argentina was a contributing factor in the decline. Plate cargoes arrived, sold, 59s; ditto, afloat, 54s; end November (bags), 56s 9d, while a large number of cargoes were disposed of to Germany and Italy at about 58s 6d. Gal-Fox-Bessarabian, afloat, changed hands at 57s 6d (per 492 lbs). Parcels irregular, but easier. Barley dull, and prices moved in a downward direction. English malting, fair to fine, 88s to 105s; choice, 110s to 115s; grinding, 70s to 80s; Californian, 90s to 100s, ex ship; Morocco, 79s to 80s, landed, per 448 lbs. American malting, 68s 6d; No. 4 Canada Western, 66s; and American feed, 59s 6d, all ex ship, per 400 lbs. Oats depressed and lower. English new whites, 56s to 61s; grey winter, 52s to 54s; black, 51s to 53s per 336 lbs. Of imported, Plate quoted 46s to 46s 6d, American white clipped 48s, and Canadian 50s per 320 lbs landed. On c.i.f. terms prices were very unsettled, but much lower on the week, with limited dealings in Plate, f.a.q., October-November at 42s, November-December 40s 6d, and new crop January-February down to 37s per 320 lbs. Beans easier. English springs, 85s to 100s; new winter, 76s to 81s per 532 lbs. Peas slow, and tendency weak. English maples, 85s to 107s 6d; Dunns, 82s to 85s per 504 lbs; Japanese marrowfats, old, 24s; ditto, new, 30s. Tasmanian blues, 25s per cwt. English rye steady at 80s to 85s on rail per 504 lbs. Oatmeal dull and occasionally rather easier. Scottish, £36 to £42; London-made, £34; American, £33 to £35 10s per ton. Lentils steady. Homeward freight markets have ruled quiet, and with tonnage in ample supply rates ruled easier for grain in all directions. From the River Plate upper ports 60s was paid for maize cargoes to U.K./Continent, December, and 70s to West Italy. North American market largely nominal, with 10s per qr the nearest indicated from Range ports to U.K.; 13s and 12s 6d paid to West Italy. North Pacific to U.K. was fixed at 110s per ton, December. Eastern rates declined sharply, and down to 62s 6d accepted for wheat cargoes, Karachi to U.K., December. A considerable chartering business was effected for new season's wheat from Australia, down to 130s for steamers, January-March loading. Maize from Beira paid 85s to U.K., December loading. Danube quiet, and 62s 6d the nominal rate to U.K./Continent and 50s Mediterranean. Time charter quiet, and values approximately 15s to 16s per ton per month for a period of six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—Conditions are almost normal again at the majority of the local works, and there are good deliveries of coal and coke. New business, however, is not coming in satisfactorily, and the increasing financial stringency, which is being felt severely by the soundest manufacturing houses, is tending to restrict trading operations. A financial set-back is now being experienced in Australia, Sheffield's best overseas market, and, owing to the long credits now required in that country, sellers are compelled to suspend shipments of goods on order. The majority of iron and steel products have now been reduced in price. Pig-iron is a conspicuous exception, as the inadequate output enables makers to maintain their old quotations. Buyers, however, are holding off the market in anticipation of a fall. The output was insufficient before the strike, and things are now worse, because it is not intended to restart this year some of the furnaces which had to be put out of blast for want of fuel. Belgian competition has hit badly sellers of semi-steel, as there is a fair supply of foreign basic billets to be had at about £15, delivered, or £4 or £5 below home prices. German billets have been offered at similar figures. Consumers are desirous of obtaining foreign pig-iron. A little has been sent from Belgium, and as the Government embargo on the export of French pig has been withdrawn, some may be available from Lorraine in the near future. Iron and steel makers consider that there is abundance of trade awaiting more settled conditions to be placed, sufficient to take the output of all producing countries. The appreciation of the American dollar has brought the American export trade down to a very low ebb. Business in the highest grades of Sheffield tool steel is stagnant, and without signs of improvement. On the other hand, the works cannot meet half the demand for a wide range of tools. The scarcity of saws, joiners' and builders' tools is as acute as during the war. The home trade in cutlery and plate has undergone an alarming shrinkage, and it is evident that the buying capacity of the public is at a low ebb. Steam coals are in active demand, and users are endeavouring to build up reserve stocks. Exports are still suspended. Gas fuels are moving freely. The house coal market is steady, the demand being less strong, as might have been expected after the strike. Merchants are able to give good delivery. Prices current per ton at pits are as follows:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; steam cobbles and nuts, 31s 2d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; best Tyne steams, 36s 6d (home) and 150s (export); branch, 37s 2d to 37s 8d; best silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent, writing on Thursday, says:—Proceedings in iron and steel trade circles have developed some interesting and significant features. There has been a general overhauling of prices for certain classes of material. Quotations have been substantially reduced, and brought more into line with conditions than has been the case for a few months back. The changes apply chiefly to the black sheet and plate departments, notably that for shipbuilding and engineering, the drops in several instances running into pounds a ton. List rates for black sheets are now called:—$\frac{3}{16}$ and under $\frac{1}{4}$ inch, £32; $\frac{3}{16}$ to $\frac{1}{8}$ inch, £32 10s: under $\frac{1}{8}$ to 12 gauge, £32 15s; 12 gauge to 16 gauge, £33 5s; 16 to 20 gauge, £33 10s; 20 to 24 gauge, £34; 24 to 27 gauge, £36. These figures represent declines of from £6 to £10 a ton—the extreme applying to 12 to 27 sizes—on those that ruled since May, but as compared with those in force at the beginning of the year they are on the average still quite £4 10s a ton higher. In the case of shipbuilding sections, makers have lowered their prices for ship plates by 30s to 50s a ton, and those on angles by from 40s to 80s a ton, so that $\frac{3}{8}$ inch and up ship plates are £25 10s.; under $\frac{1}{4}$ inch to $\frac{3}{16}$ inch, £30; under $\frac{3}{16}$ to $\frac{1}{4}$ inch, £31 10s; 7 united inches and over angles, £24 10s; angles and bull angles under 7 united inches, £27; Tees and Zeds under 11 united inches, £27; flat bars under 8 inches wide, £27; channels under 6 inches by 3 inches, £27; flat bars under 8 inches wide, £29 10s; rounds and squares under 3 inches, £29 10s; boiler plates, £31 10s. A year ago or thereabouts boiler plates were £25 10s, so that they are £6 a ton dearer than then, while ship plates were £21 to £26 15s (as against £25 10s to £31 10s now), and angles £20 10s (as against £24 10s to £27 now). It should be explained that all the new prices given above are minimum, and refer to deliveries in Scotland. The export charge for ship plates is said to be near £28 basis. There is more doing in coal. The miners are working well, giving good outputs in all Scotch districts, but as yet no production is going foreign.

Our Middlesbro' correspondent's report, dated November 18th, is as follows:—Pig-iron: The market is very quiet. There is very little foundry iron to be had yet, and it will be some time still before the output is normal. The tugboatmen's strike on the Tees continues, and causes much trouble and delay on the river. Prices of foundry iron are nominal. No. 3 and No. 4 foundry pig-iron unchanged at 225s per ton, and East Coast mixed numbers hematite still remains at 260s per ton for home consumption. Manu-

factured iron and steel: Steel rolling mills are gradually getting to work again, and should shortly be at full pressure. A cut in prices has taken place in Scotland, and it is expected that other districts will follow. The demand is there, but buyers are holding back meantime. Steel ship plates, home, £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: New business is very slow. Consumers have fairly good stocks, and are not at all anxious to do anything for forward delivery.

MANCHESTER, November 18.

Business in the market during the week has been very adversely affected by the further slump in raw cotton rates, and the confidence of buyers of yarn and cloth has been shaken to a greater extent than ever. The tone has been very uncertain and practicable demand has been at a low ebb. In piece goods a considerable inquiry has again been reported for India, especially Calcutta, but buying has not been on broader lines, the trade passing largely consisting of orders in light bleaching cloths. There has been an absence of demand for China. No activity whatever has shown itself for the Near Eastern and South American outlets. Recently there has been some improvement in employment in Great Harwood and Blackburn, but trade continues very depressed in Burnley and district. Manufacturers are easy to deal with. There has been a smart drop in yarn prices in sympathy with the decline in the raw material, and trade has been very restricted in both American and Egyptian counts. More spinners have pressed for delivery instructions.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says: There is no improvement in general conditions throughout the wool textile industry, and the small amount of new business being booked is quite insufficient to afford any realiable guide to values. In this country, and in Australasia, wool prices continue to decline, and buyers are only covering their immediate requirements. There is no forward buying at all, and at all the auctions withdrawals are very heavy. Quotations for tops and yarns are nominal, and there are great differences in quotations from different firms, owing to the fact that some are anxious to sell almost at any price. Average 64's tops are quoted at about 5s per lb, but can be bought at lower figures here and there. Spinners are not finding much new business, and yarn prices are inclined to sag. For 2-48's out of 64's tops the nominal quotation is from 8s to 8s 6d per lb. There is some inquiry for yarns for Germany, but the adverse exchanges greatly hamper export trade. There is practically nothing doing in the piece goods trade, and although manufacturers are prepared to cut prices, buyers are not attracted.

COLONIAL WOOL.

(FROM OUR CORRESPONDENT.)

Since last writing wool sales have been held in Adelaide, Melbourne, Christchurch, and London, and at none of these centres have prices moved satisfactorily. The news from Adelaide was exceedingly depressing, the reaction in Coleman Street having no doubt been felt. Melbourne and Sydney have followed suit, notwithstanding that a record price has been paid this week in Sydney for high-class greasy combing merinos. One swallow does not make a summer, and one or two high prices cannot be taken as a fair criterion of the general course of values. On all hands declines are the order of the day, private cables received from South Africa and Buenos Ayres indicating that, whilst big weights of wool are being offered, the buying power is more limited than has been known for a very long time. The decline in Australian centres has brought values sensibly below the level of Coleman Street, and it looks as if the "bears" have complete control of all markets. Some speculative sales of merino tops on forward account have been made by both Bradford and Roubaix importing topmakers, and it looks as if those who are prepared to buy on a low selling basis in the tops will come out right. One buying broker has informed his clients that good 64's tops could be had at 4s 9d out of wool bought in Adelaide, and although the same quality of tops made out of wool bought in Melbourne and Sydney is costing 6d per lb more, the tendency is distinctly in buyers' favour. South Australian merinos are not as fine in the fibre as those usually sold in Sydney, but the general tendency of values is the matter about which most concern is felt. Good 64's tops have been sold in Bradford as low as 4s 6d. Some assert that even less has been taken, but there are indications that at this price the sales will be easily covered in Australia. Price catalogues of Adelaide's first sales have come to hand this week, and are just as depressing as some of the London catalogues. Out of several leading South Australian clips, not a single bale was sold. The owners have had three weeks in which to make up their minds what to do, and at last Friday's sale they evidently met the market, being wise in so doing. At the moment there does not seem to be any sign of an improved demand, and certainly there is nothing to indicate higher values. A more general demand for the raw material is urgently needed, and Mr. Harry Dawson, of the well-known firm of H. Dawson and Co., wool brokers, was quite right when he said that the sooner there is a Commercial League of Nations whereby international credits can be established and trade with Europe helped to revive, the sooner will an end be brought to the troubles which are now crushing all industries.

The sales in London this week have been conducted under conditions very similar to those prevailing shortly after the opening, although the demand has shown some little improvement. This is evidently the result of the British Government reducing their limits.

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

Capital Subscribed	**Y60,000,000**
Capital Paid Up	**Y45,000,000**
Reserve	**Y9,680,000**

Head Office - - TAIPEH, FORMOSA.

London Office - - 58 OLD BROAD ST., E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

Sir Arthur Goldfinch must have seen what is likely to be the general course of wool values now that sales are being held in all wool-growing countries south of the equator, and the Government can make up their mind that if they do not let their stocks go at a market price, trade requirements will be met out of wool offered in Australia, New Zealand, South Africa and South America. There may have been some political reason why the Government did not lower their limits long ago, but now nothing can be gained by refusing to accept fair market prices, and after such a sale as that held at Christchurch it is high time Government reserves on medium and low crossbreds were reduced a further 25 per cent.

GOVERNMENT COLONIAL WOOL SALES.

The Committee of London Wool Brokers is authorised to announce that the Liverpool auction fixed for December 20th and 21st has been postponed, and will, as at present arranged, take place on Thursday, January 6, 1921.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Oilseeds and oil products continue depressed, and markets generally are lifeless. It is a long time since such acute depression was experienced by the seed crushing and vegetable industry of the United Kingdom, and it is by no means certain that the turning in the lane is in sight. Linseed oil in particular has been most adversely affected. Demand is non-existent, and with re-sellers pressing sales, raw oil has dropped £10 per ton on the week for spot and near. In fact, on Tuesday it was offered at Hull at £54 and less without finding buyers—a figure comparing with £58, at which the Government sought to unload its large stocks on the eve of decontrol 18 months ago. For January-April delivery the loss has not been quite so marked, though it is also heavy.

The absence of a consumptive demand at home and the parlous position of the export trade, together with a severe decline in linseed, are among the principal factors operating. Since the break in Plate options Argentine linseed has declined daily, and is about 70s to 80s per ton lower on the week for spot and 60s for shipment. The report that the United States will take a considerably less quantity of the new crop, with a consequent balance of half-a-million tons available for the U.K. and the Continent, has been an influence in depressing the market second only to the lack of trade caused by the industrial dislocation on this side.

Cotton oils have, except for technical grade for soap-making, continued in poor request, with values again lower in sympathy with the fall in cottonseed, which since the opening of the week has been more marked. While rape oil is scarce and prices steady, palm kernel oil has receded about £3 per ton. In other vegetable oils extremely little has been done.

The imports of oilseeds, oilnuts and kernels in October aggregated 129,290 tons, which is 54,000 tons better than the preceding month, but 68,235 tons behind October of last year. The principal falling off was in linseed and cottonseed. On the other hand, oil nuts and kernels were fully up to average. The ten months' aggregate is 1,126,395 tons, against 1,300,918 tons in the same period of last year—a decline of 173,523 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Best ox hides made 8⅛d-9⅛d at Thursday's auction, showing slight advances of ⅛d-¼d and two classes ⅛d-½d down. Best cows made 8⅛d, an advance of ⅛d. Horse hides again fell, making 17s-39s, a drop of 2s per hide. Calf were also erratic, heavies at 13d showing a slight advance, and lights, 12⅝d-15⅛, making fractional declines and advances. Wools were without alteration, but hogs were slightly weaker.

Foreign hides are weaker, and tanners cannot be tempted by concessions. Frigorifics are selling at port of origin at $43-$43½, 50,000 being reported to have sold at this price. Against this is the news that a block of Sansinenas of July kill have been sold at 12½d, c.i.f. The American position seems getting worse, this week's cables quoting best Chicago packers at 21 cents, and New York cabling Bogotas as offering at 21 cents also.

Merchants are doing little or no trade in Bermondsey, and one or two have told me this week that the lack of demand has beaten all records. Tanners are still pressing sales, and there are tales about of big blocks of dry hide bends being sold at 2s 3d down to 2s per lb. Best bark tannages are also declining, and some well-known makes are down to about 4s per lb in butts. Offal is dragging, and very tempting offers are necessary to promote any semblance of speculation. Upper leathers are only selling in small parcels at lower rates to shoe manufacturers, who are now making a lower-priced boot to meet the public demand. British chrome tanners are meeting with severe loss, as I hear of leather being reduced by one-half in price and then finding no buyers. Glacé kid is dull, and much resentment is felt at the amount of foreign leather coming in to compete with our own tanners.

Shoe manufacturers are still very short of work, although a few are making a quantity of low-grade boots for what may be called the "spoof advertising trade." I hear steps are being taken to put a stop to foisting off rubbish under the title of "all leather," and this week a prosecution is reported.

Walsall and Birmingham saddlers are very quiet, and many men are out of work.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 19.

Very quiet trading conditions ensued in most markets throughout the week, demand being again restricted to pressing requirements, and prices in several instances developed increased weakness, without, however, leading to any improvement in demand. Rates of exchange with continental countries still prove vexatious to traders. The quiet times that trade in general has now fallen upon is expressed in the freight market and where prices gradually crumble owing to lack of employment.

SUGAR.—The market for free parcels remained in a slow state, and small sales include crystallised West India from 79s to 83s, as to quality; white Mauritius, 94s; Canadian and American granulated, 95s; and white Mozambique, 93s 9d to 94s. American syrup very dull, and useful dark sold, 28s to 30s. Peruvian sugar, December-January, sold, 34s, basis 96 per cent.; Brazilian, ditto, 34s, f.o.b. terms.

COFFEE.—With the exception of a steady home trade demand for the finer grades, the market remained dull, as export requirements count of very little value just now. In auction, some fine bold blue Nairobi sold, 119s 6d; fair bold Costa Rica, 118s 6d. The market for future delivery remained dull.

COCOA.—Market is very quiet, and at public sale this week an extensive and varied assortment quite failed to attract any tangible support, so that only a few unimportant parcels found buyers. Fine Trinidad, 83s; Grenada, 68s; Jamaica, 70s; fine clayed Venezuelan, 150s to 115s; good bold red Ceylon, 120s.

TEA.—Public sales this week comprised 44,500 packages Indian and 24,400 packages Ceylon. There was a brisk demand for all the finer grades, and which realised full prices, but common and medium, while irregular, moved in favour of buyers.

RICE.—Market very quiet and featureless, also bran, beans, and peas.

SPICE.—Pepper market remained quiet, but fairly steady. Fair black Singapore, spot, sold, 5⅛d; ditto, November-January, steamer, 5⅜d; Aleppy, spot, sellers, 6¾d; Tellicherry, 7d; white Singapore, 1s 0½d; Muntok, ditto, 1s 1d; ditto, November-January, steamer, sold, 10¾d. Zanzibar cloves, spot, 1s 6d; pimento, 3¾d; flake tapioca, spot, 2⅛d per lb. Fair Penang seed pearl, spot, 24s; small sago, November-January, sellers, 30s; sago flour, November-January, 20s 6d; Japanese farina, spot, 27s 6d; ditto, November-January, 26s. Desiccated coconut, fine cut, spot, 75s; medium, 80s.

JUTE.—The market remained in a very dull state, and though sellers were not unduly pressing, prices are lower on the week. All manufactured goods meet a dull and dragging market. Native first marks assortment, new crop, November-December, sellers, £47; subs, £42; Daisee No. 2 actuals, £43; lightning actuals, £34; subs, £32. Some heart marks, subs, afloat, sold, £28 10s, to Hamburg, and a parcel of native firsts, spot, Antwerp, at £50. Calcutta hessians and also twills idle and nominal. 10-oz, spot, 39s; 8-oz, spot, 34s; A twills, spot, 100s; B, ditto 90s.

HEMP.—Manila kinds lower, though no undue pressure to sell existed, but buyers were few and far between J grade, October-December, sold, £62 to £61; January-March, £61 to £60 10s; K, December-February, £52; and L, £51. New Zealand flat. Fair, October-December, sellers, £51 10s; and points £53 10s.

SHELLAC.—Market unsettled, and weaker. Standard, T.N., spot, 56os; off quality, 52os; December sold, 495s to 485s; and March, 440s.

COPRA.—Market quiet and irregular. F.M.S. Straits, November-January, London, also December-February, sold down £51, then £52, but later £51 7s 6d; ditto Rotterdam, October-December, £53 10s to £54; November-January, £52 to £52 10s, £52 5s; Ceylon, November-January, London, £52 15s. Palm kernels unsettled. November-January and January-March sold down to £32, then £33, but later £32 7s 6d.

FRUIT.—The market for currants is steady, but quiet. New Pyrgos, 77s; Amalias, 82s to 84s; Vostizza, 96s to 105s. Small quantities of Valencia raisins held for firm prices. Half-boxes sold, 128s to 127s; quarters, 150s to 160s. South African, in auction, sold, 62s to 73s, with a few fine 95s. Sultanas quiet of sale. Smyrna, new, 138s; fine to choice, 150s to 160s. Muscatels steady. In auction, clusters sold, from 180s to 277s 6d; loose, 120s to 175s. Figs—Smyrna naturals sold, 58s to 60s; Spanish, 36s to 49s. Dates quiet, but prices unaltered.

MENTHOL.—Kobayashi and/or Suzuki, spot, sold, 28s; ditto, peppermint oil, spot, 6s; November-December, 4s 7½d; aniseed, spot, 3s 7½d; slab camphor, 5s 7½d, all per lb.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Chartered 1836.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

EGG PRODUCTS.—Market generally unsettled, and trade moved quietly this week. Liquid yolk, old season's spot, 70s; new, 95s; December-January, 90s; liquid whole, on spot, 60s per cwt. Dried yolk, spot, 7d; albumen, 4s 5d per lb.

RUBBER.—Market dull and depressed during the week. Plantation crepe, spot, sold down to 1s 0½d, then 1s 1¼d; December, 1s 1d to 1s 1⅛d; January-March, 1s 1⅜d to 1s 2¼d; April June, 1s 3d to 1s 3⅛d. Smoked ribbed sheet, spot, sold down to 11⅜d, then 1s 0¼d; December, 1s 0⅜d; January-March, 1s 1d; April-June, 1s 2d. Fine hard Para, spot, 1s 4¼d.

OILS.—Linseed easier. Spot, net, naked, 54s; January-April, 53s. Rape quiet. Crude, spot, 73s; refined barrels, 83s. Cotton easier. Crude Egyptian, 52s; Bombay, 44s; refined edible, 73s. China wood quiet. Hankow, spot (barrels), 108s; and Hong Kong, spot, 104s. Coconut quiet. Ceylon, spot, 86s; November-January, 83s; Cochin, ditto, 85s. Soya quiet. Oriental, afloat, cases, 54s; barrels, 57s; deodorised, 83s. Japan fish quiet. November-December (cases), 40s. Cod liver quiet. English, spot, 42s. Groundnut quieter. English crushed, naked, spot, 76s; deodorised (barrels), 95s. Turpentine irregular. American, spot, 114s; November-December, 115s; January-April, 117s. Rosin easier. American, grade B, 44s; F, 46s; G, 46s; K, 47s; M, 47s 6d; WW, 49s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum steady. American, spot, 2s 3¼d; and waterwhite, 2s 4¼d per gallon.

OILSEEDS.—Linseed: Market easier. Calcutta, afloat, £30; November-December, £30. Bombay, November-December, £31. Plate, afloat, Hull, £25 15s; November-December, £25 10s; January-February, new crop, sold, £25 to £26 15s and £26 10s and £26. Rapeseed quiet. Toria, November-December, sellers, £32; real bold Ferozepore, £32; brown Cawnpore, £29 10s. Cottonseed quiet, London. Egyptian, black, November, £16 10s; London, £18; November-December, £16 10s. Bombay, spot, Hull, £11; November-December, £11. Gingelly easier. Chinese, November-January, to Continent, sold, £39 to £37. Ground-nuts quiet. Coromandel, January-February, £30 per ton.

METALS.—Tin continued easier last Monday on selling pressure, cash declining to £237, three months to £243, but an upward movement prevailed until the middle of the week under active buying, cash advancing to £243; late December, £245 10s; and three months to £246 5s. The tone further hardened at Thursday's market, cash being registered at £246 to £245, and since at £246 10s; late December, £248 10s to £249; and three months to £250. The tendency was easier at Friday s session, business being chiefly forward, three months fluctuating down to £244. Copper: The market relapsed until Thursday on more liberal offers, cash declining to £83 10s, and three months to £83 2s 6d. At Friday's session a further decline was established, three months being registered at £81 10s to £81 5s; electros £93 to £95; best selected, £93 to £95; strong sheets, £147. Lead easier at £32 5s to £31 15s. Spelter weaker at £34 15s to £36. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £92 to £93.

Copies of the *Economist* may always be obtained in Paris: Messrs Galignani, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709), and *Journal of Commerce*, 32 Broadway.

THE MONEY MARKET.

MONEY became a good deal scarcer in the middle of the week, owing to the effects of revenue collection and Treasury bill sales, and a consequent large reduction of Ways and Means advances, and also, possibly, to bank balance-sheet arrangements, and next week's big expansion, due to War Loan interest and maturing Exchequer bonds, having tempted users of credit to assume that the expected ease had already arrived. Since Wednesday the market has been a daily borrower from the Bank of England. How far it may be obliged to borrow in the early days of the week will depend largely on the extent to which it allows Treasury bills to mature. The discount market was quiet and uncertain, with a fair demand for bills, but

the multiplicity of new issues and the liquidation in commodities, oil shares, and other securities, accompanied by rumours of commercial difficulties at home and abroad, continued and intensified the apprehension that has lately dominated the City, and was obviously an inevitable accompaniment of the process of getting back to economic sobriety. The position is certainly uncomfortable, but the tendencies are mostly towards improvement, and yesterday rumours that difficulties in New York had been arranged caused a more confident feeling. The clearing return again shows a diminished turnover, and there has been a further reflux of currency notes. An Australian loan here is said to be on the way, and may help to relieve the present deadlock in the financing of Australian trade. The present trade depression is largely due to the inability of consumers at home and abroad to pay current prices for goods, and its cure can best be effected by the necessary reduction in retail prices.

* * * *

	Nov. 26, 1920.	Nov. 19, 1920.	Nov. 12, 1920.	Nov. 5, 1920.	Previous Rate and Date Changed.

* * * *

The Bank return showed a marked improvement. The stock of gold increased by £394,000, and the note circulation by £396,000, and so the reserve was £2,000 lower. But there was a decrease of 11½ millions in Government securities, and of 1 million in Other, with the result that the total deposits were 12½ millions lower, 11 millions of which came off Private. There was a further fall of £1,139,000 in the circulation of currency notes, which now amounts to £349,284,500, including £2,907,100 for notes called in, but not yet cancelled. The fiduciary issue is now £299,127,400, or £21,472,600 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended November 20, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	22·167	Supply Services	10·730
		Interest on Debt.....	3·321
		Sundries	·785
		Reduction of Debt.....	6·262
		Added to Exchequer Balances	1·069
	22·167		22·167

These operations reduced debt by a sum of £6,262,453, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 1·335	Surrenders of Bonds, &c.	— 1·197
Treasury Bonds	+ ·601	Advances by Public Departs.	— 1·100
National Savings Certificates	+ ·200	Advances by Bank of England	— 5·250
Sundries	+ ·157	Depreciation Fund	— 1·000
		Other Debt	— ·009
	+ 2,·293		— 8·556

On account of Excise, £13,544,000 came into the accounts. The floating debt was decreased by £5,025,000.

* * * *

The total amount at the credit of the Post Office Savings Banks and Trustee Savings Banks Accounts on November 20, 1920, was £344,249,903. This compares with £344,347,922 a year ago, and £338,093,830 at the corresponding period last year.

* * * *

The Bank of Bengal advanced their rate of discount by 1 per cent. on November 19, 1920, to 7 per cent. It had stood at 6 per cent. since November 4, 1920.

* * * *

On the foreign exchange market there has been some reaction from the feverish excitement of the last few weeks, business being considerably restricted. Until Tuesday the recovery in sterling, as compared with the dollar, continued up to 3·54½, but since then there has been some reaction, the pound selling yesterday at 3.48 to 3·48½, as compared with 3.47 seven days before. The margin between spot and forward dollars has again closed up, being 1⅜ to 2¼ cents above spot for one month (as compared with 2 to 2½ cents a week ago), 3¾ to 4¼ cents (4 to 4¼ cents) for two months, and 5½ to 6½ cents (6 to 6¼ cents) for three months. The recent recovery in sterling remains mysterious. It is true that cotton purchases are likely to be less heavy this year than usual, but still the cotton movement is by no means over. It is true, too, that money rates in New York are slightly easier, but there is not much likelihood of this movement continuing. The Paris rate has shared roughly in the sterling movement, the value of the franc appreciating considerably in the earlier part of the week to 56.50, but falling away again on Thursday to over 58. Yesterday the rate at 57.85 was slightly higher than seven days before. There is no improvement in the trade position; the note circulation, although lower this week, is still much higher than a few weeks ago, and taxes are coming in very badly. The spread between Paris and Brussels remains roughly the same, in spite of the better economic outlook in Belgium. It should be noted, however, that the labour situation there has recently become more threatening, and the country is also becoming seriously affected by the general stagnation of trade. Quotations for future are in Paris 20 to 25 centimes, in Brussels 30 to 35 centimes for month above spot. The Berlin rate, after having been extremely erratic, has ended the week slightly lower, at about 245. For the time being it is almost impossible to estimate the tendency of the mark. On the one hand, there is no doubt that fundamental conditions remain unfavourable. The note issue continues to increase, the deficit continues to grow, and in spite of much talk of dumping, a large part of which incidentally is from Belgium rather than from Germany, there is little real improvement in export. At the same time, it is possible that the recent rapid rise was due to a speculative movement, which is working itself out, and the fall certainly corresponds with more stringent regulations by the Reichsbank for the restraint of exchange dealings in the provinces. There have, too, reappeared persistent rumours as to the release in one form or another of pre-war German property in the U.S.A., and there remains always in the background the possibility of a reasonable settlement of the reparation question. The quotation for future marks is now at par to one mark below spot per month. The recent improvement in the lira has not been maintained, the rate being again at about 95, as compared with 92.50 seven days ago and 90 on Tuesday last. The peseta, after moving erratically within a small margin, is slightly higher than a week ago. The florin also, after fluctuations, shows little change, the Swiss franc, on the other hand, has moved about 8-10 centimes in our favour. Christiania and Stockholm have gone slightly against us, Copenhagen slightly in our favour. There has, however, been little Scandinavian business. The price of silver has fallen rapidly, and there appears no reason to expect any steadying influence in the near future. The Hong Kong and Shanghai rates are both much lower (3s 11d and 4s 8d), and the rupee has also weakened about ½d on the last seven days. The yen is also slightly lower at 2s 10½-¾d, but still remains remarkably firm in view of conditions in Japan.

EVENTS OF THE WEEK.

NOVEMBER 20TH.—Death of Mr Jesse Collings.

NOVEMBER 21ST.—Fourteen officers murdered, and five wounded in Dublin.

NOVEMBER 22ND.—International Trade Union Congress opened in London. Disturbance in House of Commons, and sitting suspended.

NOVEMBER 23RD.—Lord Chancellor moves second reading of Home Rule Bill in House of Lords.

NOVEMBER 24TH.—Lord Grey speaks on Home Rule Bill in House of Lords. Deputation from L.C.C. to Prime Minister on unemployment. Debate in Commons on reprisals.

NOVEMBER 25TH.—French Premier comes to London. Second Reading of Home Rule Bill carried in House of Lords. National Liberal Federation Conference opened at Bradford.

NOVEMBER 26TH.—Funeral in London of nine officers murdered in Dublin. Sinn Fein leaders arrested. Mr Asquith speaks at Bradford.

COOLING.

IF, as the Prime Minister lately told us, the lava is cooling after the great eruption, it still occasionally bubbles and boils in a manner that is trying to the nerves, and the output of gas from the crater is on a most alarming scale. Nevertheless, when we consider the extent of the eruption, and of the destruction wrought by it, any nation or institution that can make a shift to stand more or less upright, has plenty of reason to be thankful, and there is no need to make too much of the symptoms which seem to contradict the Prime Minister. His worst enemies will admit that he is a master of the art of detecting the direction in which the cat will next jump, even before the sagacious animal has consciously arrived at any decision on the point. When Mr Lloyd George tells us that we are cooling, his word goes far against the many evidences of continued and aggravated heat, such as the unworthy assault, only redeemed by a handsome apology handsomely accepted, on Mr Devlin in the House of Commons last Monday.

At first sight it would seem that some of the utterances at the International Trade Union special congress, which has been in session this week in London, were evidences of a rising mental thermometer. Resolutions were moved on behalf of the Executive Committee protesting against open and covert attempts of the dominant class throughout the world to suppress the freedom of organisation and action of the workers; and declaring it to be the duty of the trade unions to "use all means to fight the world reaction which threatened the growth, existence, and the very life of the trade union movement, and that the movement must join issue with capitalism and Imperialism throughout the world." Certainly all reasonable folk will agree that the trade unions are bound to resist all attempts to restrict the workers' freedom, and will wish them all success in doing so. But is there really a "world reaction" which threatens their very existence? In this country, at least, the best organised and most prosperous industries fully recognise the advantage of dealing with a well-organised union. Some of the strongest sympathisers with the desire of the wage-earners to improve their lot may be feeling that the methods adopted by the unions have not lately been too well advised, but most individuals and institutions have garnered a plentiful crop of blunders in the distracting times that followed the Armistice. When the Congress talks of "general reaction," it is probably only describing part of Mr Lloyd George's cooling process, which is making most people think that we have had more than enough of strife at home and abroad, and that the first thing to be done is to set industry on its legs again at the full rate of production and something over, instead of continuing to quarrel about the distribution of a diminished output. The very satisfactory pace at which the coal miners have got to work again, and similar indications from other industries, seems to show that many of the wage-earners are acting on this view. Unfortunately, this tendency is not likely to be assisted by the protectionist clamour that is being so busily raised in the House of Commons by very honest gentlemen who still seem to believe that every article imported into this country is an economic disaster. The "key industry" *motif* has now been swollen into a sonorous theme, which includes every industry that is affected by foreign competition. The subjoined dialogue is from the Parliamentary Debates, Vol. 135, No. 143, p. 6:—

> Colonel C. Lowther: Will the right hon. gentleman assure the House that the toy industry is a key industry? Is he aware that shoals of German toys are being poured into this country without bearing any marks showing that they are of alien origin?
>
> Sir R. Horne: The question on the paper deals with key industries. I do not think the toy industry is a key industry?
>
> Colonel Lowther: Does that mean that the toy industry is not to be safeguarded?
>
> Sir R. Horne: No, it does not mean that.
>
> Colonel Lowther: Is not this the season of the year at which to safeguard the toy industry——
>
> Several hon. members rose——
>
> Mr. Speaker: This is not the time to discuss the question.

In a later question Colonel Croft, stirred by the increases in imported gas mantles, inquired, "Is there not likely to be great danger if legislation is delayed that there will be no key industries left in this country?" And this, at a time when the lowering of prices to a point at which a revived consumers' demand at home and abroad can set trade going again, seems to be the soundest remedy for the unemployment that is threatened. If these martial voices really spoke for British trade it would be indeed humiliating to hear it thus appealing through them for help against foreign aggression at a time when its opportunities were never greater, if only it can deliver the goods at a price that customers can pay.

These wailing cries for official help are, happily, quite out of harmony with the louder cry that is heard on all sides for the abolition of official controls, and the reduction of official meddling and muddling and consequently of official waste. Last Thursday's *Times* published a list of associations that have banded themselves together to try to ease the burden, now pressing on every section of the community, in taxes, rates, and the general cost of

living, and to press, by way of beginning, for a reduction of Government expenditure, including the service of the National debt, to 950 millions. The estimates for the debt charge for the current year come to 345 millions, so that if this effort could be realised the other expenditure would be brought down to about 600 millions, or three times the pre-war figure. Lord Askwith, we are told, has presided over the meetings which have culminated in this movement towards joint effort which deserves all sympathy and support, especially if economies are pressed in the right direction.

In trade and finance the cooling process is causing many uncomfortable chills. Our weekly review of Stock Exchange history, published on a later page, is a depressing record of falls and liquidation, chiefly connected, as our correspondent shows, with the state of affairs in the produce markets, the motor industry, and the unreceptive attitude of buyers at home and abroad. It is interesting to note that, as observed by our Amsterdam correspondent, the present depression in trade and restriction of credit is laid to the door of bankers and "capitalists" generally. The same charge is heard in America, France, and elsewhere. In fact—in so far as finance comes into the matter—they are due to the efforts of those who are responsible for the working of the financial machine to repair the evils wrought by politicians and officials by their abuse of it in war time. High prices have been the chief cause of much of the bad temper from which all classes have suffered during and since the war, and the cooling down of industry to a lower level is essential to a return to sanity. The process inflicts some hardship, but if it enables us to get to work heartily on a sounder basis, these losses will soon be forgotten, and in most cases they fall on people whose war profits provide them with very ample protection against bad effects from chill.

THE RAILWAYS' AGREEMENTS WITH THE GOVERNMENT.

The decision of the Committee, which, with Lord Colwyn as chairman, is considering the agreements made between the railway companies and the Government, that, for the present, its meetings shall be held in private, was a very wise one. The matters under discussion are of prime importance to the State and to the companies, and it is advisable that they be conducted without that interruption which would arise from, say, inconvenient questions being asked in Parliament, or by false impressions being created by erroneous comments in the Press, such as that which appeared recently, wherein it was said that the Committee had been informed that the companies had made claims amounting to between 200 and 300 millions. On this last point Viscount Churchill, the chairman of the Railway Companies' Association, has announced that no claims have been formulated, and that it is quite impossible at the present time to give any indication or to form any estimate of what the claims may involve. There is no question here of secret diplomacy or of a surprise being sprung on the Government. The two main items relate to the companies' stock of stores and materials, of which the State has had the use and which will, necessarily, have to be restored in quantity to the pre-control amount, and to making good the arrears of maintenance and renewal at the prices which will prevail when the work is done. These are questions which will have to be settled before the period of control ceases, and as that, as now arranged, is only nine months hence, it is time that the matter was looked into, so that the State may know its liabilities. The reason why Sir Herbert Walker has declined to give evidence before the Committee is, no doubt, that, under the Act of 1871, by which the railways are controlled, questions of dispute must be referred to arbitration. Any proceedings now might prejudice such arbitration.

In the main, the replacement of stores is a small matter. Railway companies carry an enormous quantity of stock, and we find, on reference to the various annual reports, that the 16 leading British companies had, on December 31, 1913, stores and material on hand of an aggregate value of 13 millions. During the war the purchase of every kind of stores was, owing to the high prices, to the scarcity, and for economic reasons, neglected. The State, being in possession of the railways, used, where necessary, what was in the companies' stock, and it is this that has to be made good—not by the 1914 cash value, but by either the same quantity of stores and material in kind or by cash at its present-day value. All prices have, of course, risen tremendously; this is indicated by the fact that, in spite of less having been bought, the same 16 companies had in stock at the end of 1919 stores to the value of 26½ millions. Therefore, if an increase of, say, 200 per cent. has to be added to the 1913 figures, credit must be given for the 26½ millions, or whatever the amount may be when the transaction is completed, so that the whole question is one of less than 15 millions for these 16 companies, and of, perhaps, 20 to 25 millions for all the railways. The arrears of maintenance and renewal have come about, mainly, in the same way—by a scarcity of labour and material, by the high price of labour and material, and for economic reasons. The reduction of spending in this way had two effects—(*a*) it saved money to the Government, and (*b*) it would have to be spent later. This was recognised by the Government, and it was agreed that whatever was saved in this way should be handed over to the companies. It was also recognised that when the work was done labour and material would necessarily be higher in cost. In the various White Papers on railway finance, the remark has been made that the arrears are estimated at the 1913 cost of ascertained arrears, plus 75 per cent. for additional cost of labour and material, and it is added that the actual cost is not yet ascertainable, but payments have only been made on a 15 per cent. addition. Before considering what this means, it may be observed that the payment of these arrears began in 1916, and at the end of that year the 16 companies already mentioned had an aggregate of 8½ millions placed under this heading in the general balance-sheet of their annual reports. At the end of 1919 this amount had grown to 46¼ millions. As, however, the Ministry of Transport statements account for only 33½ millions for the whole of the railways of Great Britain up to the end of 1918—there were two millions in 1919, but they covered Ireland also—it is evident that the companies have placed a large amount to arrears out of their own resources. If, then, the 33½ millions include 15 per cent. additional, the principal is 29 millions. If an addition of 75 per cent. is to be made, a further 17½ millions will be requisite, but if, as is possible, the cost is going to be 200 per cent. higher than in 1913, 67 millions, less the 4½ millions for the 15 per cent. increase already paid, will have to be forthcoming.

This question of arrears presents some difficult problems. There is, for instance, the fact that a large proportion of maintenance expenditure is for supervision—time spent in seeing that all is in order. A good deal of this duty was not performed during the war; matters took care of themselves. But the companies have no occasion to make that particular deficiency good. Again, failures in plant and equipment, if neglected, get worse, and, conversely, a prompt repair saves the situation. Thus, an item which a small attention would have kept going has, by its neglect, to be renewed entirely earlier than would have been necessary. Herein is a thorny point for discussion. Another question is whether any item being repaired or renewed now—and therefore at the cost of the State—should not be paid for out of the arrears. Yet, again, there is the matter of additional wear and tear during the period of the war caused by war traffic. This, we imagine, is a question having two aspects. The freight traffic carried was of greater value, but this does not necessarily mean that the tonnage carried was equally greater. It is questionable, also, whether the passenger traffic was higher—in mileage, at all events. What is a matter intimately affecting the shareholders is one also of arrears—arrears of interest. It was the sums paid by the Government for arrears of maintenance and renewal that, being invested by the companies, helped to maintain, and in some cases to increase, the dividends. Had the companies been paid, at the time, the 75 per cent. agreed to, instead of only the 15 per cent., the amounts

that could have been invested would have been much greater, and, because of the cumulative effect, would have each year been higher and the dividend situation would have been better.

PROGRESS IN RUBBER MANUFACTURES.

The recent heavy fall in raw rubber to nearly 1s per lb may be lamentable to the plantation shareholder, but it is very welcome to the manufacturer of rubber goods. Trade in such articles is stimulated when the raw material becomes cheaper, enabling goods to be offered over the counter at lower rates, and therefore to a larger public. Everyone knows how enormously the use of rubber has increased during the past twenty years or so, but comparatively few realise that in addition to the lucrative trade done by our manufacturers, British import and export merchants have always made a "good thing" of the commerce in raw rubber. Long ago, in the middle of last century, when imports of rubber were absurdly small compared with what they are now, no less than one-third of the imports was re-shipped by our traders at a profit to be paid by the consumers of goods made in other countries. Here is a comprehensive statement of the trade for 60 years before the Great War :—

Raw Rubber Trade.

	Re-Exported.		Retained for Home Consumption.	
5 Years' Averages.	Thous. Cwts.	Thous. £	Thous. Cwts.	Thous. £
1854-58	10.3 ..	65 ..	19.4 ..	122
1859-63	17.5 ..	150 ..	32.0 ..	273
1864-68	29.8 ..	246 ..	58.2 ..	484
1869-73	53.1 ..	530 ..	99.7 ..	1,053
1874-78	72.0 ..	646 ..	78.2 ..	780
1879-83	93.3 ..	1,249 ..	87.3 ..	1,287
1884-88	110.9 ..	1,220 ..	95.4 ..	1,127
1889-93	145.8 ..	1,622 ..	123.1 ..	1,487
1894-98	228.4 ..	2,706 ..	164.0 ..	1,853
1899-1903	304.3 ..	4,003 ..	162.7 ..	2,100
1904-1908	334.1 ..	5,858 ..	253.6 ..	3,445
1909-1913	612.6 ..	13,709 ..	385.2 ..	6,425

It will be noticed that up to the early years of the present century the re-export trade had increased about 30-fold in quantity, while the amount retained for home use had increased less than nine-fold. Since then, however, re-exports have doubled and home consumption has considerably more than doubled. This would appear to indicate that our manufacturers have greatly strengthened their hold upon the trade since the Twentieth Century opened, and statistics of commerce in rubber goods reinforce the conclusion. Here is a statement covering the 45 years prior to the war, and including the bulk of rubber goods, save tyres and tubes for vehicles :—

Overseas Trade in Rubber Manufactures (Including Boots and Shoes and Waterproof Apparel).

(In Thousand £'s.)

5 Years' Averages.	Gross Imports.	British Exports.	Excess of Exports.
1869-73	63	825	762
1874-78	97	800	703
1879-83	141	921	780
1884-88	324	1,020	696
1889-93	365	1,198	833
1894-98	580	1,233	653
1899-1903	711	1,452*	741
1904-1908	789	1,943*	1,154
1909-1913	830	2,550*	1,720

* Waterproof apparel is only included in the exports since 1902, when it amounted to £263,000, and it raised the average for 1899-1903 by £107,000. Its average for 1904-8 was £248,000, and for 1909-13, £647,000.

It is perhaps well to observe that waterproof apparel includes goods proofed "by any process," but doubtless the major portion would be rubber proofed, and in any case the classification is precisely the same for imports as for exports. It should also be noticed that a number of highly-vulcanised rubber goods, such as fountain pens, tobacco pipe mouthpieces, and so on, are not covered by this table, but appear elsewhere in the import and export lists. Substantially, however, the above represents the trade in rubber goods, with the important exception of tyres and tubes, which have only been separately entered since 1913, and will be noticed later.

Glancing down the above record, we see that up to the beginning of the century exports had made no greater progress than imports. Indeed, in the late 'nineties the excess of exports over imports was actually smaller than it had ever been during the preceding quarter of a century. In the year 1901 there was a drop to £572,000—the lowest point reached in any year since 1885; but thereafter a substantial and sustained recovery set in, the excess reaching its highest in 1913 at £1,972,000.

It is clear that during the last 30 years of the old century a severe struggle went on between our own makers and their principal competitors, the Germans and Americans. It is also equally clear that our men "came out on top" long before the war; for in the 15 years to 1913 imports grew by £119,000 and exports by £1,098,000. Of this improvement, roughly two-thirds was due to better business with foreign countries, and one-third to the freer purchases of markets in the British Possessions. Excellent business was done with such countries as Argentina and Brazil, and there were large and progressive transactions with the principal countries on the Continent of Europe.

Now let us see how the industry has fared since the European War, and in doing so we shall be able to take account of tyres and tubes, as well as the rubber goods included in the preceding table :—

The Rubber Trade since the War.

(in Thousand £'s, 000's omitted.)

	Goods as Included in the Above Table.			Tyres and Tubes, not on Complete Vehicles.			
	Exports.	Net Imports (*).	Excess of Exports.	Exports.	Net Imports (*).	Excess of Exports.	Excess of Imports
1913.....	2,816	743	2,073	1,299	2,525	..	231
1914.....	2,076	718	1,358	1,021	1,738	..	717
1915.....	1,722	821	901	1,291	1,569	..	278
1916.....	2,501	1,293	1,208	2,142	1,472	670	..
1917.....	2,416	632	1,784	1,710	888	822	..
1918.....	2,086	506	1,580	1,731	572	1,159	..
1919.....	4,845	802	4,023	4,262	2,025	2,237	..

(*) Imports, less re-exports.

Net imports have been used here, because in some years re-exports of tyres and tubes were about half-a-million sterling, and in one year nearly a million.

This statement brings out strikingly the great importance of the tyre and tube section of the industry. Even when the Census of Production was taken, in 1907, this section accounted for about one-third of the entire output, and it looks as if the proportion had increased very much since then. At all events, we see that out of total exports of British-made goods worth 9 millions sterling, tyres and tubes figured for 4¼ millions in 1919. Moreover, it would appear to be now the most progressive branch of the industry, for during the seven years a substantial excess of imports has been converted into a surprisingly large excess of exports. The result is doubtless due largely to the virtual paralysis of Continental competition, but the continuance of such abnormal conditions must not be relied upon. Even now competition is reviving vigorously, may be expected to become keener as the months go by, and must be met strenuously by our manufacturers if they desire to retain the commanding position they have reached in the trade.

During the present year something very like boom conditions have prevailed. Exports are progressing at such a rate that tyres and tubes alone seem likely to reach 6½ millions sterling, as against 4¼ millions last year, and total exports will certainly exceed 12 millions, as compared with 9 millions last year. On the other hand, net imports are growing rapidly, and those of tyres and tubes alone bid fair to be about 5½ millions, as against the 2 millions of last year, while the total net imports will probably register 7 millions. In other words, exports will be about 200 per cent., and net imports rather more than 100 per cent. above the pre-war level.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

BOLIVIA.—There are evidences of improvement in the economic situation of Bolivia under the tripartite administration of the Junta, composed of three of the nation's most distinguished financiers—Señores Saavedra, Ramieez, and Escalier, with the valued co-operation of Dr Salamanca. This situation comes as an additional relief after the unpleasant scandals connected with the financial *régime* of the late Guerra Government, of which echoes still reach the Republic in the form of rumours of actions in the Supreme Courts of the United States against the late Chief Executive of Bolivia. The Budget for the current year has been stated at 50,000,000 bolivianos (roughly about £4,000,000), and the expenditure at about the same. There is little question that all obligations of the Government, both foreign and home, will be readily met. In the meantime, the Administration is being pressed to contract further loans with both North American and French groups of capitalists, who see in Bolivia's reputedly rich oil deposits the nucleus of a great economic revival, which will put the oilfields of Mexico into the shade. But a commendably cautious policy is being pursued by the Junta Government, and it is quite certain that no binding agreements will be made with these, or, indeed, with any group of capitalists until after the fresh election of President has been completed. This is timed to take place in November, and as things appear at present should pass off without accident. The financial conditions of the country can hardly be other than sound when it is seen that while the total imports did not exceed £5,000,000 in 1918 (Bolivian trade returns, like those of some other South American States, are usually in arrear), the exports, including minerals, attained a total value of £15,000,000 odd. Tin and other metals form at least 90 per cent. of the country's exports at present; but in the near future oil is destined to become a highly important factor in the industrial situation, while certain agricultural products, if properly handled, might likewise be made to play a part in the country's exports, especially to neighbouring States. Taxation, at present very light, can be increased to a certain extent without imposing any hardship upon the people. Bolivia is one of the lightest taxed countries in South America.

ECUADOR.—The "new broom" in Ecuador seems to be sweeping clean—a not unusual attribute of new brooms. A large number of old abuses and official anomalies appear to have gone out with the late Government, and the President, Señor Don José Luis Tamayo, seems to be proving as good as his word and giving the people "a sound, sensible, and moderate administration." An excellent beginning was made when funds were transmitted to London to meet the payment due on the Condores bonds, the coupons of which had been in default since March, 1914. The last coupon cashed was that of July, 1911. The service of the Guayaquil and Quito Railway bonds has also been maintained, and no more has been heard of the proposal put forward by the new President urging the bondholders to take over the line. On the other hand, his proposition that an independent audit be taken meets with little support, since there would be nothing to be gained by such a procedure, an audit having been taken some years ago, when, as has been already pointed out in the *Economist,* it proved entirely favourable to the management. Unquestionably, the working of the Guayaquil and Quito railway could be improved, but not until considerable sums have been expended upon the track and equipment, which are—and for a long time past have been—in a very bad condition, rendering it physically impossible to run trains at anything approaching a dividend-earning speed, and necessitating practically the whole of the takings being expended upon patching up danger spots and the maintenance of the steep gradients. In the meanwhile, funds are about to be raised to construct other railroads to serve the economic needs of other portions of the huge territory; a syndicate, with a capital of $12,000,000 (= £2,400,000), is spoken of as having been formed in the United States to construct railways and other industrial enterprises. Recently, capital was found to commence the exploitation of wood-pulp, and the results seem to have been wholly encouraging. The initial factory erected near the capital of Quito is to be duplicated in a more distant part of the State, while the tobacco industry is to be handed over to a monopolistic company, which will pay substantial royalties to the Government. The company will, in return, make a loan to the Government in addition. All foreign capital having for its object the expansion of the Republic's natural wealth, mineral and agricultural, will be encouraged, the President having announced this, in his special message to Congress, in the middle of September last, as being the policy of the Administration.

CUBA.—Those who profess to know Cuba and the Cubans consider that the present financial crisis is likely to prove a long-drawn-out affair, and that while it may be temporarily overcome by means of some dearly-bought assistance from North American banking interests, its after-effects will be felt for a considerable time to come. In some respects the collapse is reminiscent of what took place in May, 1909. Then, as now, over-speculation had been the immediate cause of financial disaster; but the chief difference consists in the fact that Cuba in those days had not anything like the developed wealth, population or world-reputation that it enjoys to-day. But prosperity—almost unexampled by any other Latin-American country in so short a period—has brought the people little wisdom and less foresight. Experience has not made them more cautious, or what they may have gained by it on the one hand seems to have been lost by illusion on the other. The retiring President—Señor Don Mario G. Menocal—has been fully alive to the seriousness of the situation, and he has done, it would appear, as much as his waning administrative influence has permitted. It is not much, confessedly, but he is hardly to be blamed for that. Whosoever his successor may be—and there are two strong candidates anxious to step into the executive shoes—will have to face an economic situation which will put to the test all the financial ability of which he may be possessed. His chief difficulty, however, will be found in the determination of the enormous bureaucracy not to suffer either diminution in their number or in the rate of their pay. And yet the continuation of the enormously swollen salary list at the prevailing rate seems impossible. Rochefoucauld's dictum that "if we have sufficient will, we should always have sufficient means" does not apply in this case. It is the "means" that will be lacking. The price of everything is already so high—Cuba is the most expensive country in the world to-day in regard to the cost of living—and taxation is upon so heavy a scale that any increase in the revenue from either of these sources is entirely out of the question. Although the price of sugar, the immediate cause of the present financial disaster, may be raised beyond the figure to which it has fallen, so as to bring comparative prosperity to the island—it is said that even at 8 cents per lb this might be assured—the control of the market will probably hereafter be entirely in the hands of the Americans. Planters view such a situation with anything but satisfaction, and it is even said that if this fear should be realised, and any but an open market offered, the Cuban Sugar Manufacturers and Planters' Association will reduce their crop after—and even before—the 1920-1921 production is finished. On the other hand, the declaration and the continuation of the moratorium of October 10th last may force importers of American goods to refuse consignments as they arrive. Duty taxes are in some cases 30 per cent. of the value, notwithstanding the highly favourable tariff enjoyed by United States goods over those of other countries, and since only 10 per cent. of merchants' deposits is available at the banks, it is clear that an economic *impasse* is unavoidable. British interests are involved to the extent of the railways' traffics, which are necessarily suffering in the enforced reduction of freights and the increased congestion at the ports of Havana and Cienfuégos. At the first-named port, already choked with goods of every description, over one thousand men have now left work because, on account of the moratorium, they have been unable to receive their weekly pay. Commercial contracts are being repudiated in many directions, and it is impossible to deny at the time of writing that the whole economic position of the island appears very disconcerting.

Business Notes.

Railway Figures.—The financial results of working the railways during the six months ended September 30th, issued by the Ministry of Transport, reflect in the figures for September for the first time the recent increases in rates as well as in fares. The surplus for the United Kingdom for September was £228,500, and as the working of the Irish railways in September is said to have thrown upon the Government a liability of £100,000, the surplus in Great Britain alone was nearly £330,000. No previous monthly return has shown a surplus, the nearest approach being a net Government liability of £2,155,600 in August. Passenger train receipts amounted to £11,121,300, as compared with £9,447,000 in September, 1919, an increase of 17¼ per cent. The latter figure, however, was affected by a railway strike, while this year return tickets at old fares were in many cases available, and season tickets did not reflect the full increased yield. The figures for October and November will be disturbed by the coal strike, so that the real effect of the increase of fares will not be ascertainable for some time. Receipts from goods train traffic were £15,070,400, showing an increase of 124 per cent. as compared with September, 1919, but the comparison is again vitiated by the railway strike of last year. Tonnage has increased by about 14 per cent. The coal strike is estimated to have caused a loss of revenue of about £8 millions.

Coal Output.—The figures of coal production indicate that the miners have worked well since their return to work. The strike was called off on Wednesday, November 3rd, and for the week ended November 6th the output was 756,300 tons as compared with 4,100 tons in the previous week. In the following week, the first week of full working, the output was 4,775,600 tons. The following are the figures for the various districts for the last four weeks for which figures are available :—

Week ended—	Oct. 23.	Oct. 30.	Nov. 6.	Nov. 13.
	Tons.	Tons.	Tons.	Tons.
Northumberland	1,300	1,500	31,400	225,000
Durham	1,300	..	89,700	614,900
Yorkshire	400	600	145,400	807,300
Lancashire, Cheshire, and North Wales	300	500	63,700	452,300
Derby, Nottingham, and Leicester	200	100	54,300	603,100
Stafford, Shropshire, Warwick, and Worcester	1,100	900	64,700	383,400
South Wales and Monmouthshire	4,700	300	153,300	934,700
Other English districts	100	100	31,900	111,400
Scotland	3,100	100	121,900	643,500
Total	12,500	4,100	756,300	4,775,600

For the week ended October 16th the production was 4,611,600 tons, and for the previous week 4,713,100 tons. For the week ended November 15, 1919, the total was 4,679,400 tons. For the first three quarters of this year the production has been 62,103,000 tons, 58,166,000 tons, and 59,467,000 tons respectively.

Cost of Living.—Labour Ministry statistics, set out in the *Labour Gazette,* show that the average level of retail prices (including those of food, clothing, fuel and light, &c., as well as rents) at November 1st was about 176 per cent. above that of July, 1914, as compared with 164 per cent. at October 1st. The increase was due mainly to the increase in the retail prices of flour and bread following the reduction of the subsidy, but partly, also, to increases in the prices of butter, milk and eggs. On the other hand, reductions in the prices of some articles of clothing were reported by many retailers. The *Labour Gazette* figures for retail food prices alone show a percentage increase at November 1st over July, 1914, of 191 for the United Kingdom as a whole, the figure one month previously having been 170 per cent. Fortunately the food price outlook seems at last a little brighter.

Employment in October.—According to the *Labour Gazette,* the decline in employment, which was observed during September, continued in October. In the latter half of the month most of the principal industries were seriously affected by the shortage of fuel, resulting from the general strike at the coal mines, and at the end of October employment in most of these industries was very slack. The proportion unemployed among members of trade unions (mostly of skilled workmen) from which returns are received rose from 2.2 per cent. at the end of September to 5.3 per cent. at the end of October, and the number of workpeople claiming out-of-work benefit under the Unemployment Insurance Acts of 1911 and 1916, or the Out-of-Work Donation Scheme for ex-Service men, rose from 274,000 to approximately 500,000. In addition, large numbers of workpeople in many of the principal industries were on short time at the end of the month. Movements of the unemployment percentage are shown below :—

End of—	1913. %	1916. %	1917. %	1918. %	1919. %	1920. %
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	1·4
August	2·0	0·4	0·5	0·5	2·2	1·6
September	2·3	0·4	1·3	0·5	1·6	2·2
October	2·2	0·3	1·1	0·4	2·6	5·3*
November	2·0	0·3	1·1	0·5	2·9	..
December	2·6	0·3	1·4	1·2	3·2	..

* Excluding coal miners.

Upon the basis of such information as is available to the Labour Ministry, it appears that the total increase in the number of unemployed (excluding the coal miners) between October 8th and November 4th "was at least 350,000, and may have been considerably greater."

American Cotton Crop.—At the beginning of this week the Census Bureau of the United States Government published the fifth report of the season on the amount of cotton ginned up to the 15th inst., the total being given as 8,920,000 bales, against 7,604,000 bales last year, and 8,706,000 bales in 1918. The statement was quite equal to expectations, and indicates that there is every probability of a larger crop than for four or five years back. Estimates at the moment vary from 13,000,000 to 13,500,000 bales. The recent marked fall in American cotton prices has caused great interest in Lancashire trade circles. Since the beginning of this season, on August 1st, values have fallen about 50 per cent., and whereas at that time futures in Liverpool were changing hands at round 21d, the rates now required are only about 11d. Values, therefore, are considerably below the cost of production in the United States and transport to this country. Taking all the facts into consideration, it looks as though speculative buying might be expected as the figures posted are certainly attractive, but bullish operations are checked by the tightness of money. It is quite reasonable to anticipate, however, that present prices cannot continue for any length of time, and unless there is a decided change in the situation, it may be taken for granted that growers next spring will plant a smaller acreage.

Cotton Weaving Conditions.—In most industries there is a tendency at the moment for the workpeople to try if possible to improve their working conditions, quite apart from the wages earned. A few months ago the leaders of the Lancashire cotton operatives made an application

to the employers for the appointment of special cleaners and sweepers in the weaving sheds, so as to leave weavers free to carry on the production of cloth. Several joint conferences between the Masters' Association and the trade union officials have been held, and the latter have put forward a definite scheme. The employers, however, have rejected the proposal. It was anticipated that if some agreement could have been arranged the new work would have provided employment for 5,000 to 6,000 workpeople. Some firms have given the suggestion a trial, but the experiment in very few instances has been successful. Early this year the attention of the Textile Institute was drawn to a growing tendency on the part of young operatives in cotton mill districts to prefer occupation in departments other than the weaving shed, and it was stated that in most instances objection was taken to the noise associated with weaving. The Research and Inventions Committee of the Textile Institute has, therefore, made an inquiry into this matter, and this week a report has been published. It is pointed out that whilst it is obvious that no great reduction of noise can be effected without a revolutionary change in the whole system of weaving, nevertheless the cumulative effect of improvement in respect of a number of details might justify effort in that direction. In any event, accurate information as to the relative extent to which various mechanical motions contribute in producing the total volume of noise would be of definite interest and value. In point of construction the ordinary cotton-weaving loom is notoriously defective, due largely to the low price at which large numbers were produced in pre-war days. Noisiness is inevitable with the existing common type of loom, but even small improvements if secured at many points on the machine would tend to better conditions in the weaving shed. Several suggestions of a rather technical character have been put forward, and investigations are being continued. It is thought desirable that any useful results obtained should be made known at the earliest opportunity, especially to overlookers and machinists, so that the advantage of means to reduce noise might be immediately available for adoption.

Czechoslovak Budget Surplus.—According to a telegram just received from Prague, the exact figures of the Czechoslovak Budget for 1921 are as follows :—

	Crowns.
Ordinary expenditure	9,002,474,576
Extraordinary expenditure	4,840,663,611
Total expenditure	13,843,138,127
Ordinary revenues	12,079,376,370
Extraordinary revenues	2,050,543,180
Total revenues	14,129,919,550

The surplus, amounting to 286,787,423 Czechoslovak crowns, is due to the action of the special Parliamentary Budget Committee, who cancelled a number of items contained in the original draft.

The Economic Condition of Bulgaria.—Signs of a recovery have recently been noted by foreign observers in Bulgaria, but a much less favourable account, supported by a mass of statistics, is given by the Secretary of the Varna Chamber of Commerce, M. Dimitre Vlakhoff, in a pamphlet submitted to it in May last ("La Situation Economique et Financière de la Bulgarie," Sofia, 1920.) The loss of Thrace and Macedonia, he points out, deprives Bulgaria not only of access to the Ægean, but of a region rich in minerals, fruit, vines, hemp, cotton, rice, and tobacco; much of the tobacco grown in Bulgaria proper was counted as Thracian, and now will fall in price. The Dobrudja, now Roumanian, is a land of large estates cultivated by modern methods, with many cattle and sheep. The new Land Act cuts up the country into peasant holdings, to which agricultural machinery is less applicable, the prices paid by the State will probably be too high, and the holders will be virtually mortgaged for years. Manufactures, through State aid, had been developed before the Balkan wars, but at the expense of the manual trades; the manufacturers now demand the extension of their privileges for ten years more—till 1935—and State aid in raw materials, which is coming to them to some extent, but burdened with the profits of middlemen. During the war there was much promotion of companies and wild speculation in their shares. Budget deficits have been accumulating for years; the Debt in 1912 was 683 million leva, in 1914 1,200 million; the latest estimate makes it 22 milliards, including the war indemnity of 2.25 milliards, but excluding the advances from the Central Powers, cancelled by the Treaty of Peace. The war profits tax, the Customs, monopolies, and the tobacco tax, all produce much less than the estimated revenue; the present peasant Government lets landholders off very lightly, despite increased land values, while individual traders are assessed at 40, 80, and even 135 times as much as they paid two years ago. Only in Austria, Hungary, Poland and Germany is the currency more depreciated. M. Vlakhoff's remedies are—better cultivation, for the agricultural output is relatively much lower than in Western Europe; grouping of holdings so as to facilitate the use of agricultural machinery; more co-operative societies, though at present there are many engaged in the supply of agricultural requisites, cheesemaking, banking and distribution; and relief from the indemnity. The pamphlet was written before the enactment of labour conscription, and its pessimism may be in part political. But its facts and figures merit the attention of all students of the Near East.

The Tea Position.—In a circular letter issued by Brooke Bond, and Co., on "Tea in 1919-20," it is calculated that the world's tea production is at present about 25 per cent. above consumption, production having increased and consumption declined lately, owing to the demobilisation of armies and the lack of demand from Russia and Central Europe. "We have to face the fact," runs the letter, "that we have a stock of more than 222,000,000 lbs, the normal stock being about 90,000,000 lbs—enough for three months—and that we have so far received only a small part of the 1920 crop. The Indian and Ceylon Tea Associations, therefore, suggested to the planters that the crop of 1920 shall be restricted to 90 per cent., and the 1921 crop to 80 per cent. of the average crops produced in the years 1915 to 1919." Tea exports from India for the year ended March 31, 1920, were 379,248,953 lbs, against 357,744,599 lbs in the previous year, and 293,534,194 lbs in 1913-14. Ceylon's exports in the past year were 135,341,429 lbs, against 129,483,383 lbs in the previous year. The following figures are given of imports and consumption of tea in the United Kingdom :—

Imports.

	1919.		1920.	
	Lbs.	Percentage.	Lbs.	Percentage.
India	185,134,637	55·00	180,362,057	55·44
Ceylon	103,160,692	30·81	99,609,028	30·62
China	16,659,566	5·04	12,867,410	3·95
Java, Sumatra, &c.	24,598,579	7·36	30,682,961	9·44
Other countries	5,851,407	1·79	1,818,498	·55
Total	335,404,881	100·00	325,339,954	100·00

Home Consumption.

	1919.		1920.	
	Lbs.	Percentage.	Lbs.	Percentage.
India	201,055,462	68·72	175,304,519	61·65
Ceylon	79,416,679	27·15	79,331,071	27·90
China	3,229,840	1·10	2,490,385	·88
Other countries	8,867,397	3·03	27,201,956	9·57
Total	292,569,378	100·00	284,327,931	100·00

"Altogether," concludes the letter, "it cannot be said that things look very bright at the present moment for anyone connected with tea, either planter or distributor. Increasing production and decreasing consumption must, if continued, mean ruin. This, however, neither planter nor distributor is likely to allow. Now that the proposal to limit production has been adopted by most of the planters, producers will no doubt devote their energies to growing as good tea as possible, instead of heavy

crops of poor tea. "Distributors are exerting themselves to find new markets and to increase consumption where tea is already drunk. There are splendid fields, some still almost untouched, ready to be exploited." Consumption in the United Kingdom increased from 6.56 lbs per person in 1917 to 7.32 lbs in 1918, and to 8.62 lbs in 1919, in spite of the high duty and enhanced prices.

A Library for Central Europe.—With Lord Bryce as president and a very distinguished committee, the Anglo-American University Library for Central Europe appeals for assistance in the shape of books, publications, and money. Owing to the unfavourable rate of exchange and the high cost of living, the prices of recent English and American books on philosophy, science, literature, &c., have made it impossible for the universities of Central Europe to keep in touch with English and American thought. A scheme has consequently been formed to establish in Central Europe, under British-American auspices, one or more libraries of recent books in English indispensable to university teachers. The work has been organised on a broad, non-political, non-sectarian basis, and deserves prompt and generous support. Donations of literature will be gratefully acknowledged by the hon. secretary, Mr B. M. Headicar, London School of Economics, Clare market, London, W.C. 2, to whom all communications may be addressed. Cheques and money orders should be made payable to the "Anglo-American University Library," and should be sent to Lieut.-Colonel George Schuster, at the same address.

The Underwriter and His Stock.—A Stock Exchange correspondent writes:—Underwriters have been responsible, before to-day, for putting on the brake when new issues threatened to overrun the bounds of the public's capacity and willingness to take the stocks. Present indications point to a probable repetition of such financial history. A month or six weeks ago underwriters were doing well. Most of the new issues went to the public either at once, or very soon after the allotment, when investors readily took stock at a small discount. The new Local Loans makes a case in point, because although underwriters had to take a large percentage of the stock, an immediate demand sprang up, and they were able to get out at a profit. For Metropolitan Water Board "C" stock there was also a fair amount of inquiry, but the price, after being $\frac{1}{2}$ discount, fell back to $\frac{7}{8}$ discount. Underwriters of the $6\frac{1}{2}$ per cent. New South Wales stock received 70 per cent., and the discount of $1\frac{1}{4}$ does not allow much margin of profit to those who were given $1\frac{1}{4}$ per cent. underwriting commission. With these gilt-edged stocks, however, the underwriters are usually told how much they are expected to take, which simplifies matters, and works out profitably on the average. But with the fashionable Notes it is a different thing, and underwriting may be hawked about for several days before the lists are completed. As the public show more or less disposition to invest in new issues, so does the readiness of the underwriter fluctuate. A few comparative failures, especially in the cases of heavy new stocks, and the underwriters will close their books. As the banks are loth to lend on such securities—and the precise status of some of these Notes is somewhat difficult to place—the underwriting firms have to rely upon their own resources for the payment of allotment money and subsequent calls. With markets sagging, and ever-fresh issues offering more and more attractive terms, the chances of placing underwritten stock at a profit become speculative. The money must be provided somehow, and other stock may have to go in order to raise funds for taking up unwanted notes or shares. All the markets feel the effect of such selling, especially when most other people are also trying to raise money by realisations of Stock Exchange securities. There are many unfavourable financial factors at work to-day, and, of them, the flood of new issues competing with older stocks is naturally noticed by underwriters as likely to prove increasingly troublesome unless steps are taken to lay a check upon it.

Social Service.—"Welfare Work" is a hopeful feature of present-day industry, and employers who promote it should be interested in the publications of the National Council of Social Service, a body comprising many well-known social workers, with the Speaker as its President. It aims at the co-ordination of voluntary and State activities for the furtherance of social health and well-being, and at the diffusion of information of new developments in the work at home and abroad. It desires to form a council in each local government area representing the local authorities, the churches, and various secular agencies, including the friendly societies and the local branches of labour unions, to discuss and arrange new schemes for the benefit of the people; and the experience gained in the working of these bodies, some of which are already in operation, is synthesised at the Council's headquarters at Stapley House, Bloomsbury square. Monthly bulletins give details of fresh legislation and of recent books on social questions, and excellent handbooks are published for the Council by Messrs P. S. King and Sons. The first of these deals with the State services concerned with public health, insurance, the poor law, industry, pensions, and civil and criminal justice. "Social work" has been a feature of English life for more than a century, but the acquaintance of the workers with the actual conditions of society has usually been limited, and the difficulties of extending it were formerly almost insuperable. Much energy, too, has been wasted through overlapping, and the extension of State interference has greatly increased both the amount and the need of knowledge. We commend the Council to the notice of employers and of all who are interested in social reconstruction.

Orient Steam Navigation.—The report of the Orient Steam Navigation Company for the year ended June 30th last shows a substantial increase in profits. They are, however, still well below the total earned in the year immediately preceding the war. The following table shows profits and appropriation for 1913-14 and for the past five years :—

	1913–14	1915–16	1916–17	1917–18	1918–19	1919–20
	£	£	£	£	£	£
Profit	227,454	170,088	180,152	166,271	162,062	218,699
Brought forward	56,717	96,742	96,996	112,359	115,073	63,912
	284,171	266,830	277,148	278,630	277,135	282,611
Deb. int. and fees	23,383	28,614	24,127	22,895	22,561	21,265
Reserve	75,000	98,614	100,000	50,000	150,000	100,000
Repairs and renewals	25,000	25,000	..	50,000	..	..
Pref. div.	10,176	10,176	14,603	14,603	14,603	14,603
Def. div.	63,701 (55 %)	7,430 (5 %)	26,059 (15 %)	26,059 (15 %)	26,059 (15 %)	78,065 (15 %)
Carried forward	86.911	96,996	112,359	115,073	63,912	68,678

Since 1915 the dividend has been paid free of income-tax. During the past financial year the deferred capital was increased by £346,710, existing shareholders having been given the right to subscribe at par for two new shares for every share held. The reserve fund now amounts to £1,000,000, including £100,000 allocated from last year's profits, £100,000 transferred from contingencies account, and £50,000 from underwriting account. Of this total it is proposed to capitalise £520,440, and to distribute bonus deferred shares. This will double the paid-up deferred capital, which in 1914 was £115,820, and raise it to £1,040,880. In 1914-15 the capital was increased by £57,910, that amount being added to the dividend distribution for 1913-14, "to facilitate the subscription." Changes in the latest balance-sheet, as compared with that dated June 30, 1919, include increases of £228,300 in freight and passage money paid in advance, and of £767,100 in the book value of the fleet and investments, the two being included together in the true shipping company balance-sheet style. Since the close of the financial year the company has acquired three ex-enemy steamers, two of which are expected to be ready for the Australian service early next year.

Union Cold Storage.—The report of the Union Cold Storage Company for the year 1919 shows a further small increase in profits. After purchasing and cancelling £53,780 debenture stock, paying £12,150 off mortgages on specific properties, and meeting administration expenses, the gross profit amounted to £306,360, as compared with £293,424 for 1918 and £289,922 for 1917. Debenture interest required £4,200 less, and £5,600 more was brought forward, so that the amount available for distribution was £22,700 higher at £299,293. The table below shows profits and their distribution in each of the past four years, and in 1913 :—

	1913.	1916.	1917.	1918.	1919.
	£	£	£	£	£
Gross profits	137,094	242,213	289,922	293,424	306,360
Debenture interest	31,727	47,333	66,637	62,333	58,133
Net profit	105,367	194,880	223,285	231,091	248,227
Brought forward	20,806	31,993	45,014	45,454	51,066
	126,173	226,873	268,299	276,545	299,293
Res. and depreciation	43,185	59,459	75,048	76,679	78,777
Preference dividend	46,109	92,400	117,797	118,800	118,800
Ordinary dividend	..	30,000 (10 %)	30,000 (10 %)	30,000 (10 %)	30,000 (10 %)
Carry forward	36,879	45,014	45,454	51,066	71,716

The method of appropriation shows little variation, the allocation for depreciation being increased by £2,000, and the balance forward by £22,700. The ordinary dividend remains at 10 per cent., above which level it may not go until a reserve fund of £75,000 and a dividend equalisation fund of £125,000 have been built up. At present the only visible reserve in the balance-sheet is the depreciation reserve, which stands at £562,754. The auditors' report draws attention to the fact that "no provision has been made for the amount, if any, payable by the company in respect of excess profits duty (1914-19)." The balance-sheet shows increases of £240,850 in mortgages, of £226,800 in creditors, and of £386,500 in property. Loans on mortgage on the assets side are £84,700 higher, while goodwill remains unchanged at £26,050.

Consolidated Gold Fields.—The dividend on the ordinary shares of the Consolidated Gold Fields for the year ended June 30th was maintained at the rate of 7½ per cent., free of income-tax, but the sum carried forward is nearly £58,000 higher than a year ago at £162,636. The report just issued states :—"The transfer of the assets of the company, as provided for in the agreement with New Consolidated Gold Fields, Limited, having taken place, the whole of the share capital of that company has been allotted, and is owned by the company. The realised profit on the year's operations consists mainly of the dividend on the shares in New Consolidated Gold Fields, Limited, the balance representing dividends received and profit on sales of investments for the period prior to the sale of the assets." After deducting all outgoings (including debenture interest), the net profit for 1919-20 was £325,538, from which dividends on the first and second preference shares, £114,611, and French and South African taxes, £3,013, fall to be deducted, leaving £207,914. The addition of £104,722 brought forward from last year's accounts, brings the available balance to £312,636. Of this, the ordinary dividend, as stated above, absorbs £150,000, leaving £162,636 to be carried forward. The balance-sheet shows the shares in New Consolidated Gold Fields entered at £4,500,000, while cash and loans at call amount to £123,125. The report of new Consolidated Gold Fields shows a realised net profit on operations of £477,883, against which was charged £21,947 for formation expenses, and £165,408 for investment depreciation. The interim dividend paid to the holding company amounted to £270,000. The report makes the following reference to developments on foot :—"The directors have given considerable time and attention to the investigation of numerous proposals, both industral as well as mining. In addition to certain interests taken up in South Africa, which are referred to in the manager's report, they have initiated negotiations and entered into relations with other corporations in England and elsewhere, regarding which they are as yet unable to present a report."

United of Havana.—In spite of a considerable increase in the ratio of expenditure to receipts the net revenue of the United Railways of the Havana and Regla Warehouses, Limited, for the year ended June 30th showed an increase of over £19,000. The amount payable to the inland revenue authorities rose from £240,000 to £320,000, but this increase was more than offset by the "gain in exchange," which brought in £166,400, as against £17,700 for the previous year, and the amount available for distribution, as will be seen from the following comparative summary, was over £50,000 higher :—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£	£
Receipts	1,611,671	2,090,360	2,287,732	3,052,101	3,185,064	3,739,801
Expenses	980,411	1,129,238	1,303,530	1,800,304	2 165,889	2,701,220
Ratio	(58·97%)	(54·02%)	(56·98%)	(58·99%)	(68·00%)	(72·23%)
Balance	661,260	961,122	984,202	1,251,797	1,019,175	1,038,581
Fixed charges and taxes (less sundry income)	195,372	220,001	323,289	594,723	293,975	255,140
	465,888	741,121	660,913	657,074	733,200	783,441
To reserve	140,000	415,000	170,000	120,000	150,000	175,000
Dividends	328,002	327,278	466,148	531,517	506,882	596,882
Ordinary rate	5%	5%	5%	6%	7%	7%

Passenger receipts increased by 33.6 per cent., and goods and live stock receipts by 9.2 per cent., although the tonnage of goods carried fell by 2.5 per cent. Increases in tariffs were authorised by the Government of Cuba in December, 1917, and again in May, 1919, and the report states that the company is asking for further increases to meet the continued demand by all classes of employees for higher wages. The quantity of sugar cane and products carried by the company fell from 7,234,600 tons to 6,663,700 tons, a decline of 7.9 per cent. Allocations to reserve consist of £150,000 to equalisation of dividends

A COUNTRY-WIDE policy of friendly co-operation with well-established, carefully chosen banking correspondents provides for Irving over-seas customers reliable and responsive sources of information and facilities of service in all the market places of America.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

account, and £25,000 to insurance account. After payment of the 7 per cent. dividend the balance forward is increased by £11,600. The report gives details of the schemes of amalgamation of the Cuban Central Railways and the Western Railway of Havana, a short summary of which was given in the *Economist* of September 4th, page 351. Prospects for the forthcoming sugar crop are said to be "exceedingly favourable," and the general manager's report, dated October 19th, states that the commerce of the island is in such a healthy condition that it is anticipated that the recent financial crisis, "due entirely to over-speculation in sugar," will be speedily passed. Owing to Labour and other difficulties the conversion of locomotives to oil fuel has been delayed, but it is hoped that the majority will be equipped before the next busy season.

United Dairies.—The fifth annual report just issued of the United Dairies, Limited, shows that the policy of absorbing the smaller dairy concerns continues. The report states that :—"In connection with the purchase of new businesses during the year, 392,062 shares have been issued." This is reflected in the increase of the item, "Investments and Loans," to £3,306,368, as compared with £2,351,225, the sum at which it appeared in the previous balance-sheet. In the same period the paid-up capital has been increased from £2,430,681 to £3,281,336. Net revenue for the year ended June 30, 1920, amounts to £279,668. Dividends at 12½ per cent., less tax, absorb £262,083, and including the £84,923 brought forward from last year's accounts, a total of £102,509 is carried forward. Incidentally, the report remarks that "the Ministry of Food, as from January 31st, discontinued both the control of milk and the subsidy on home-produced cheese. This action had a very adverse effect on the dairying industry, and caused your subsidiary companies to make very heavy losses during February and March." The balance-sheet will be found analysed in another column. The company is asking for powers to increase its nominal capital by £1,000,000. This increase is necessitated by the number of shares which have already been issued in payment for businesses and other assets, and probable future requirements in the same direction. There is, however, no intention of making an issue for cash at present.

The Gilbart Lectures on Banking, at King's College, London, will this winter be delivered by Mr F. E. Steele, assistant general manager of the London County Westminster and Parr's Bank. Subject—"The Banker as a Lender." Previous lecturers have been Professor Leone Levi, Sir John R. Paget, K.C., and Mr Hartley Withers.

The National Baby Week Council asks for funds to carry on the National Baby Week Council's educational propaganda. Contributions should be sent to the secretary, 5 Tavistock square, W.C. 1.

FRANCE.—FALLING PRICES—BANKS AND CREDIT —FOREIGN TRADE—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 23.

THERE are now abundant indications that, both in consequence of the fall in the price of raw materials, and owing to the deliberate restriction of purchases by the public, something like a general fall in commodity prices has begun throughout France. According to the *Situation Economique et Financière*, the following price changes have latterly been registered in connection with the principal categories of merchandise dealt with on the chief of the French markets :—

	Highest Jan.-May.	August 17.	November 15.
Havre—			
Cotton	970	632	405
Wool	1,715	1,170	890
Cocoa	425	225	205½
Coffee	339¾	168.50	163⅛
Paris—			
Copper	762	613½	607½
Tin	2,362	1,565¼	1,584
Lead	307¼	216¼	230
Zinc	340	255	236
Marseilles—			
Colza oil	685	510	465
Linseed oil	625	500	520
Olive oil	1,300	1,012	1,025
Hides	925	775	366
Tallow	590	410	330
Alcohol	1,330	960	890
Lyons—			
Silk	500	265	225
Beziers—			
Wine	118 50	80	85

Information drawn from other sources indicates that since November 15th the fall in wholesale prices has continued steadily.

Reports from many quarters show that the comparatively sudden fall in prices is proving disastrous to a large number of manufacturers who have accumulated large stocks during the past twelve months, and now find themselves compelled to sell at a loss. The situation in the wool trade is a case in point. M. Valentin, the president

of the Wool-Traders' Association, complains that, when the State decontrolled wool and urged manufacturers to produce to the utmost, they were compelled to buy from the producing countries at exorbitant prices, owing to the high rate of exchange. The home-grown product, such as there was of it, could only be bought at equally high rates. Owing to the restricted purchases by the public, manufacturers now find left on their hands large stocks of goods that have cost them 20f, whereas to-day they would cost only 8f, 10f, or 12f. The effect of the appeal that was made to the manufacturers to produce in 1919, now that it has been followed by an appeal to the public in 1920 to restrict their purchases, is that a very serious crisis threatens in the Roubaix district, which is the chief centre of the French trade in woollen goods, while employees, estimated at 50,000 in number, are idle.

Another industry that is particularly affected by the fall in price is the leather trade. One important Paris firm has failed with liabilities of over 40,000,000f, and others are reported to be in difficulties. Equally bad reports have been received from Lyons, the great silk centre, owing to the price of the staple product having fallen 50 per cent. since the spring. At least two failures have taken place, owing to the impossibility, it is asserted, of obtaining further financial accommodation. Large and even enormous fortunes have been made in the Lyons silk industry since the war began, and it is understood manufacturers who now hold large stocks are seriously contemplating coming to an arrangement between themselves to throw large quantities of the manufactured product on the market at a loss, and be content with averaging out of the large profits of the past four or five years with the certain loss that now faces them.

Manufacturers who have had the courage to take the bull by the horns and offer their goods at a prudent but substantial reduction in price, are already reaping the benefit of their bold course. A striking instance is that of a large motor-car construction concern, which came into existence during the war. Some few weeks ago it announced a reduction of 20 per cent. on all orders received during the following fortnight or three weeks, on the understanding that delivery would be guaranteed, but that all such orders would be cancelled if their number did not prove sufficient to justify their acceptance. The public responded so satisfactorily that orders representing gross profits of between 15 to 20 million francs were received forthwith, with the result that the concern, which was reported to be seriously contemplating winding up, has been placed on its feet again.

The prudent action of many of the great banks, who have rigidly set their faces against extending further credit in connection with what were obviously speculative ventures, in order to bring about a healthier trade situation, has had an enormous effect in forcing stocks of manufactured goods upon the market. The adoption of this policy is largely due, it is understood, to the action of M. Millerand, when he assumed office last January as Premier, and to his successor, M. Leygues, who advised the banks not to refuse all credit, as has been asserted, but to "ration" credit, by extending facilities only to sound concerns, working on honest commercial lines but temporarily in need of help of this kind, and to deprive known speculative firms of all further advances, which would be only utilised as a means of enabling them to force prices still higher. Under the leadership of M. Bobineau, the governor of the Banque de France, this policy has produced extremely satisfactory results already, and will prove effective, it is believed, in hastening the present tendency of trade and commerce to return much nearer to normal conditions.

The official returns showing the movement of French foreign trade for the first ten months of the current year, as compared with the corresponding period of 1919, were issued on Sunday, and are as follows :—

	First Ten Months of		Comparative Increase or Decrease.
	1919.	1920.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	7,395,460,000	8,288,801,000	— 893,341,000
Raw materials	13,861,939,000	10,804,201,000	+ 3,057,738,000
Manufactured goods	8,527,117,000	8,304,768,000	+ 222,349,000
Totals	29,784,516,000	27,397,770,000	+ 2,386,746,000
Exports—			
Foodstuffs	1,792,309,000	793,730,000	+ 998,579,000
Raw materials	3,999,285,000	1,471,681,000	+ 2,527,604,000
Manufactured goods	12,187,329,000	4,779,343,000	+ 7,407,986,000
Postal parcels	911,340,000	688,396,000	+ 222,944,000
Totals	18,890,263,000	7,733,150,000	+ 11,157,113,000

The figures show that the surplus of imports, which amounted to over 19½ milliards of francs during the first ten months of 1919, has this year been reduced to 10,894,000,000f. During the ten months the sales of French manufactured goods abroad have increased by over 150 per cent., as compared with the same period last year. Another notable feature is a fall of 893 millions in the amount of foodstuffs imported.

The Bourse, during the past week, has been consistently weak. The already low quotations prevailing generally were in the vast majority of cases marked down still lower—in consequence, according to general opinion, of the destruction of Wrangel's army and the events in Greece. The Bourse, however, is undoubtedly also suffering from the repercussion of the uncertain industrial outlook here. Investors, and particularly the professional element, have naturally reduced their holdings as much as possible in order to be able to buy back at attractive prices when the right moment shall come. Rentes, however, have been well supported, in spite of the general depression, especially the 3 per cent. perpetual, which moved up from 54.95 to 55.10.

It is announced that M. Aupetit, who has for several years held the post of Controleur-Général of the Banque de France, has been appointed Secrétaire Général of the Bank, in succession to M. Ernest Picard.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—POLITICS—SOCIALISATION—EXCHANGE AND BOURSE—FOOD QUESTION—EMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BERLIN, November 20.

THE Foreign Minister, Dr Simons, again this week made a sharp attack upon the conditions of military occupation of the Rhine country, alleging that the Allies' present measures are taken with a view to a further advance into Germany, that the garrison's strength is excessive, and that the cost, now estimated at 30 milliards of marks, exclusive of compensation which has to be paid by Berlin to the residents for their deliveries in kind, is unendurable. He declared that Germany cannot fulfil her reparation obligations until the economic side of the occupation is satisfactorily regulated. The Reichsrat has passed a Bill providing for a plebiscite in Upper Silesia, to be held within two months of the return of the Province to Germany, to decide whether a separate Upper Silesian State, with the title "Land Schlesien," shall be created. The new Silesia's relations to the Republic would be similar to those of the other federated States. Apart from the movement towards Poland of part of the population, there is a strong local demand for autonomy, varying from the self-government of a Prussian Province, separated from the rest of Silesia, to complete statehood. Poland has already passed a law pledging her to grant autonomy if she gains Upper Silesia under the Peace Treaty plebiscite. The German Bill promises wider autonomy than the Polish law.

The Bill presented this week providing for accelerated collection of the emergency levy and war tax on increment of income provides that the minimum amount to be collected next year is 10 per cent. of the taxed person's property, and not less than a third of the tax itself. This will be paid in two quotas on February 1st and August 1st next. Where the levy is not more than 10 per cent. of the payee's property, he must pay it all next year. In case of great wealth, the proportion to go to the State at once rises to 21 per cent. The Prussian Finance Ministry has issued rules for more economical administration similar to those agreed upon last month for Federal finances. The financial powers of Prussian departmental chiefs as against the Finance Minister are reduced, and should the Finance Minister object to any particular expenditure proposal, he may not be overruled by less than a majority of the whole Cabinet. Compared with the Republic's finances, municipal finances are tolerable. The annual Inter-Municipal Congress has brought out the fact that the total debt of 50 Prussian cities and towns has risen since 1914 only 150 per cent., and the total expenditure only from one and a-half to five milliards, an increase small in view of the currency depreciation. The Federal Government is showing energy against violators of its innumerable maximum-price and rationing laws. A Bill newly passed by the Reichsrat legalises penal servitude of up to 15 years for illicit trading. The director of a great Berlin hotel was this week fined 200,000 marks and sent to prison for a long term for trading in rationed goods beyond the legal quantity. The advisability of these prosecutions is being disputed, as such illicit "Schleichhandel" is universal, and the majority of offenders escape punishment and make fortunes.

The Socialists in the Reichstag and the Miners' Union outside have begun an attack on the Government, on the ground of its alleged dilatory and ambiguous attitude towards Socialisation of coal mines. The cause of this attack is the joint Reichswirtschaftsrat and Coal Council Commission report, summarised by me last week, recommending that miners be given a chance to become small stockholders, and that the present private Trusts should be encouraged. The Miners' Union denounces the stockholding proposal as mockery of the miners' demand. When the Reichstag Socialists interpellated the Government, the Minister of Industry, Dr Scholz, gave a very vague reply, promising only that the Cabinet's promise of last month to "publicly regulate" coal mining would be redeemed as soon as possible; but giving no hint as to the intended solution of the difference of principle which exists between, on one side, "full Socialisation" (termination of private ownership), and, on the other side, merely public control, which already in some measure exists through the representative Federal Coal Council. By declaring that it must first get advice from its experts the Cabinet shows its unwillingness to take responsibility.

The Reichsbank report for the first week of November shows a considerable diminution of pressure, and an unusually small increase in note circulation. The holding of bills and discounted Treasury certificates, which in the last week of October increased by 5,989,700,000 marks, fell by 4,028,400,000 marks to 49,779,100,000 marks. The note circulation increased by only 3,700,000 marks to 63,600,100,000 marks, and the "Kassenschein" circulation dropped by 118,000,000 marks to 12,906,100,000 marks, showing a total circulation decline of 114,300,000 marks to 76,510,000,000 marks. In the violent bull speculation in stocks and foreign currencies which has prevailed since June the week saw a heavy break. As always, the decline in the exchanges led. Sterling, which on the 12th sold at 295.30, and the dollar, which then sold at 87.71, dropped rapidly, and on the 18th sold at 243.60 and 69.44. One cause of the drop is believed to be renewed American interest in mark securities. Contributing influences were that in Germany large quantities of foreign currency were in weak speculative hands, and further, that Germans are delaying the purchasing of goods abroad in expectation of a further drop in world-market prices. On the 16th sterling dropped 25 points. The result was a heavy decline, first in "exchange securities," and then in almost all stocks. The 17th was a no-Bourse day, but when on the 18th the decline was resumed, some of the favourite high-priced speculative stocks fell 100, Canadian Pacific 40, Baltimore and Ohio 25, and one stock usually priced around 3,000 fell 500. Federal Loans were little altered, but Prussian 3½ per cents. fell 0.75. Next day the semi-panic was over; sterling recovered to 258.30, the dollar to 74.33, and there was an average rise in industrial stocks of 10-20, and rises of up to 300 in a few high-priced stocks. To-day, with the exchanges little altered, the Bourse was firm. A sudden demand appeared for home loans. Five per cent. War Loan remained at 77.50, 4 per cent. rose from 66 to 66.70, 3½ per cent. from 57.20 to 58.40, and 3 per cent. from 69.40 to 70.25. The last-mentioned foreign favourite has risen 10½ points since the end of last year. Announcements of further big industrial profits have tended to stiffen the market. The Bismarckhuette, one of the greatest Silesian metallurgical concerns, announces net profits of 13,573,759 marks, against 1,313,622 marks in the preceding business year, and a dividend of 28 per cent., against 5 per cent.; the Allgemeine Elektricitäts Ges. announces net profits of 47,705,000 marks, against 27,031,000 marks. The abuses of the all-prevailing exchange speculation attract attention. Until midday each day the Reichsbank provincial offices have been buying foreign bills at Berlin price of the preceding day, with the result that initiated persons could daily make large profits without possibility of

loss. The large Berlin banks are accused of having taken advantage of this system to make money for themselves. The Reichsbank has ordered that in future all orders to its provincial offices are to be sent for execution to the Berlin Bourse.

The immediate future of the mark exchange is naturally impossible to foresee, but official statements indicate that very large foreign payments will soon have to be made. The Federal Breadstuffs Department, which imports grain, states that it is now paying 7,500 marks a ton, as against 4,000 marks not long ago; and that it has yet to import 1,600,000 tons, which will mean payment of around 12 milliards. Whether Germany gains by paying 7,500 marks a ton to America, and limiting the price of home-produced grain to around 1,500 marks, is a disputed question. Farmers allege that, with such maximum prices, they cannot buy fertilisers, and that they must leave land fallow or take to nationally less desirable crops; and financiers see in the resulting enormous foreign payments one cause of the bad mark exchange. The total import of breadstuffs on the Government programme is 2,500,000 tons, of which 900,000 tons have been purchased, and 408,500 tons already received. The drop in mark exchange is expressing itself in a slow general price rise, checked somewhat by the fall in gold prices of many commodities abroad. The living cost index in Frankfurt-on-Main (100 on April 1, 1919; 26.5 on January 1, 1914) has risen in the period September 1st-November 1st—from 281 to 316. Living cost has increased by about 12 times up to now, so that at present gold exchange it is considerably cheaper than before the war. Causes of this are restriction of rents and State subsidising of food, but despite the subsidising the food-index has risen since April 1, 1919, from 60 to 230.33. The hops harvest this year shows recovery. In 1914, a record good year, the area planted was 22,761 hectares, the crop 169,477 double-centners; in 1918 the area fell to 8,826 hectares, and the crop to 5,825 double-centners; this year the area is 11,595 hectares, and the crop 60,253 double-centners. The Government lately sanctioned a raising of the strength of beer, which was practically non-alcoholic during the war. The universal fusion movement has affected also this industry. The two biggest breweries, the Patzenhofer and Schultheiss, amalgamated some weeks back.

Employment continues to improve slowly. The number of publicly supported unemployed on November 1st was 361,717, against 374,398 on October 15th. The boot and textiles industries have greatly improved. The Labour Ministry, however, estimates that the unemployed who are not publicly supported are at least equal in number to those publicly supported. Large numbers of persons of the former well-to-do classes, including in Berlin 300 owners of large apartment houses, are living wholly or partly on charity, the cause being that the bureaucrats arbitrarily prevent certain classes from increasing their incomes so as to counterbalance the depreciation of the currency, whereas the same depreciation is allowed to turn thousands of parasitical speculators into millionaires. In particular the poverty among men of science is extreme.

The export duties which were nearly all reduced during the late summer are now being abolished piecemeal. This week were removed the duties on photographic apparatus, talking machines, pianos, and musical instruments of nearly all kinds, stoves and central heating apparatus, construction iron, iron plates, drawn wire, machine parts, bridges, marine buoys, gas and water reservoirs, most agricultural machines and tools, anchors, ships' chains, skates, pens, needles, motor-cars for pleasure and transport, and motor-cycles. The duty on locomotives and locomotive boilers is cut to 2 per cent. Coming at this moment, these reductions defeat the sense of the original export duty measure, and the cause is official obstinacy. Before the duties, decided on in December last, were first imposed on May 10th, the mark exchange had recovered so much that there was difficulty in exporting at all, and an agitation immediately began for abolition of the duties. This the Government obdurately refused as long as the mark was high; but it has given way now when the mark is again low, and when exports could easily bear the duties. Most other measures of State regulation as practised here have results contrary to the regulators' intentions.

ITALY.—EXCHANGES IMPROVED—THE PEACE OF RAPALLO—MUNICIPAL ELECTIONS—THE BREAD SUBSIDY.

(FROM OUR CORRESPONDENT.)

TURIN, November 19.

THE foreign exchanges, which had boomed to 100.50 for London, 175 for Paris, 450 for Switzerland, 30¼ for the American dollar, have undergone a favourable change, and close to-day respectively at 92.50 for London, 162 for Paris, 410 for Switzerland, and 26¾ for New York.

The signature of the Treaty of Rapallo has greatly cleared the political horizon. The Government has obtained an overwhelming vote of confidence from the House of Deputies. The last municipal elections have not gone so well for the Communist party as they anticipated. Their progress was great from the last pre-war elections, for, instead of 200 municipal and four provincial councils, they are the masters in 2,000 and 25 councils respectively. But their boasted note of capturing 5,000 municipal councils out of 8,500 was upset by the electorate. They hold the mandate for 27 per cent. of municipalities, which is a small but significant regression from the high-water mark of 30.7 per cent. seats conquered at the political elections of November, 1919. Specially notable was the fact that, of the great cities, only Milan and Bologna, which they possessed from 1914, fell to their lot. All the other great cities, Rome, Naples, Palermo, Venice, Florence, Genoa, were held by constitutional parties. Even Turin, the stronghold of Italian extreme Leninism, was saved from their domination.

The Government has at last introduced a Bill for the reduction of bread subsidy. According to Government declarations, the consumption of wheat and other cereals will in the agricultural year 1920-1921 be 40 million quintals—excluding the producing population, who feed themselves on their own products. Of these, 12 millions will be obtained at home by requisitions at a mean price of 110 lire per quintal, and a total expenditure of 1,320 million lire. The other 28 million quintals we shall be obliged to import from foreign countries at a total cost of 7,980 million lire, assuming a price of 10.80 dollars per quintal at origin and a dollar exchange of 28 lire. The total cost to the Government will thus be 9,300 million lire. The selling price of wheat has hitherto been 62 lire per quintal, involving a total sum amounting only to 2,480 million lire, so that a net loss to the Exchequer of 6,820 million lire is in prospect. The Government do not propose to wipe off at a single stroke this stupendous loss. They content themselves with raising the selling price to the level of the requisition price. The Government will sell the wheat at the same price at which they take it compulsorily from Italian cereal producers.

The following table describes the change:—

	Present Price.	Average Price of Requisition and Average Proposed Selling Price in the 1st Quarter 1921.	2nd Quarter 1921.
Soft wheat	60	110	137·50
Hard wheat	70	126·50	159·50
Rye	60	88	104·50
Barley	53	88	104·50
Maize	60	88	94·50

They hope to be able to sell bread, on this basis, in the first part of 1921 at a price varying from 1.30 to 1.40 lire per kilogram, instead of the present average price of 1 lira. The rise in the selling price will yield 2,726 million lire, and so reduce the loss from 6,820 to 4,096 million lire. The problem is only touched—not solved, and the expediency of exasperating—in words and in propaganda—the Socialist for a one-third solution is doubtful. The Government pretend, it is true, to cover another 1,920 million lire of the bread loss by means of several new and increased taxes. But the pretence is not to the point, as all the yield of new taxes will be necessary to cover the ordinary deficit in the Budget. Even if the bread did not cost a farthing to the Exchequer, the ordinary revenue is not at a level with ordinary expenditure. Some of the new taxes are very bad and unequally distributed. However, the step taken by Government is in a right direction, and we can still hope that Parliament will better the Government plan.

HOLLAND.—GENERAL SITUATION—NEW COLONIAL LOAN—AMERICAN EXCHANGE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 22.

THE financial and economic situation has not much altered in Holland during the last few months. The banks are rather cautious in granting credits, and induce their customers to restrict their engagements. Everybody talks of the general crisis which is sure to come, and it may be questioned whether there was ever so much talking of a coming crisis—the conviction that the existing conditions cannot continue might prove to be to some extent a remedy in itself. It now becomes evident that scores of enterprises started during the war cannot hold out in more normal times. The abilities of the merchant who during the war succeeded in achieving large profits are now severely put to a test, and consequently many enterprises collapse. So we have seen disappear various vegetable-drying and pulp factories with heavy losses to the owners, and mostly also to the banks which financed them. Shipping companies set up on broad lines and heavily capitalised have to be liquidated or taken over by more powerful concerns; trading societies doing oversea business are suffering bad losses, and, curiously, quite frequently on account of wild speculations by their managers, who were sent out some years ago, and were accustomed to wide margins of profits in steadily rising markets, but who lacked carefulness and insight as soon as the prices of products went into another direction. The slump in sugar prices has, of course, affected the colonial markets seriously. Whereas a previous East Indian colonial loan was subscribed for to a very large extent in Java itself, it is now believed that of a new loan which seems to be on hand very little should be placed in the colonies. The investment market showed great activity some weeks ago, and most of the issues were a fair success, with the exception of our municipal loans, especially of large cities, such as Amsterdam and Rotterdam, which have ceased to attract the investors even at the rate of 7 per cent. The Socialists ascribe this to the banks and capitalism, while the banks point out that they act only as a medium, and that the municipalities have impaired their own credit by too lavishly expending money in all directions.

The high rate of the American exchange causes a great deal of controversy in the financial Press. Professors of economy attack the policy of the Netherlands Bank, which they accuse of unduly perpetuating the inflation. They insist on the export of gold to America. Prominent bank directors and business men, who have also unquestionable authority on their side, defend the policy of the Netherlands Bank, whose president has more than once shown insight in similar matters of a difficult and intricate nature.

POLAND. — THE AGRARIAN REFORM — MUNITION INDUSTRY — MOTOR TRANSPORT — DANZIG AS COTTON MARKET—TRADE WITH THE EAST—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

WARSAW, November 18.

A FEATURE of Poland is the excess of the rural population. With the exception of Italy, there is no other country where a similar overcrowding in the rural districts can be found. It is estimated that in the former Congress Poland alone, one and a-half million of people having no land were living in the villages. This landless proletariat provided the bulk of the emigrants each year. Because of this excess of population, big farms were a rare exception, and most of the holdings were much too small for an intensive and rational use of the soil. Machines were too expensive for the small proprietor, manures were not used, and in general the peasant produced only enough for the maintenance of his family. The small size of the peasant farms was before the war to a great extent responsible for the backward state of Polish agriculture in what was formerly Russian and Austrian Poland. The land hunger among the peasants was always very great, and it has been intensified by the Russian revolution. The claim for a division of the great estates became general, and the elections to the first Polish Diet were principally influenced by the agrarian reform programmes of the different parties. After a long struggle an Agrarian Reform Bill was passed by the Diet on July 16th The first measures for putting it into practice are now being taken. The Bill will probably revolutionise the agrarian conditions of Poland. Instead of the large estates, which occupy in Posnania 36 per cent., in the former Congress Poland 34 per cent., in Galicia 22 per cent., of the whole cultivated land, new small farms of 15-23 hectares will spring up. A special Agrarian Board has been instituted with the right of expropriation from great landowners. The maximum size of these estates has been fixed at 60 hectares for estates situated in industrial districts, at 400 hectares for Posnania, Podolia, Volhynia, &c., and at 180 hectares for the other parts of the Polish Republic. The landowners will receive an indemnity amounting to 50 per cent. of the market value of their land in any given district. It is expected that this reform will contribute to the progress of Polish agriculture.

Industry in general is suffering from a severe trade depression. The causes are manifold, the steady decline of the mark being partly responsible. The situation has been aggravated by the prohibition of exports from Germany to Poland. Germany, by refusing all licences, is trying to exercise pressure on the Polish Government, and hopes thereby to obtain political concessions. The trade relations between the two countries are almost entirely interrupted. The only trade which is rapidly developing is the munition industry. Two big companies are actually building munition works. One of them (Starachowice) is intimately connected with Vickers and Schneider-Creusot. This company has recently increased its capital by 37½ million marks. The other company (Pocish) is financed by Polish banks, and has a capital of 56 million marks. Preparations are made for opening an explosive factory. Poland has taken all necessary steps for making itself, as far as possible, independent of foreign supplies of war materials. It is generally believed that the country must be prepared for Bolshevist aggression in the beginning of next year. The Bolsheviks express the same fears as regards Poland, so that this mutual suspicion may prove a danger to the peace of Europe. Polish railways are suffering from a lack of rolling-stock, and there is a great need for the development of all other means of transport. An American company with a capital of one million dollars is making preparations for the transportation of goods between Danzig and Cracow by motor lorries. It is expected that this new line will be opened in the course of this year. The building of new railways, especially in thinly populated districts, is too costly, and it is certain that in future motor transportation will play a great rôle in Poland.

Before the war all cotton imports for Poland came through Bremen. Since the armistice Danzig has taken possession of this trade. Actually great quantities are lying in the port, and the official authorities are making strenuous efforts to transform Danzig into a big cotton market. The trade relations between Poland and Hungary will probably be very intimate in the future. A Polo-Hungarian Trade Company, with the former Minister of Foreign Affairs, Count Burian, at its head, has been constituted in Budapest, with the purpose of supplying Polish industry with wool, tobacco, and agricultural implements. Hungary will take in exchange Polish

THE MERCANTILE BANK OF INDIA, LTD.

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

cotton goods, which are already being exported in great quantities.

It is believed that in the future the Lodz cotton factories will find an excellent market in Eastern Europe. Livoir (Lemberg) is the centre of this trade. It is reported that this town is supplying Rumania, Bulgaria, and the whole of the Balkans with cotton goods. From Livoir textiles are also sent to the Ukraine, though this trade is actually illicit. The Government has announced that licences for export of Polish and foreign manufactures to Soviet Russia, the Ukraine, and White Russia are refused without exception. Nevertheless, a trade of contraband, especially with the Ukraine, is flourishing. Great quantities of sugar are to be found there, and the peasants are paying very high prices in gold roubles for salt, petroleum, and textile goods.

I give below the latest quotations for foreign exchanges as compared with those of a month ago :—

	Oct. 18.	Nov. 18.		
French francs .....(100 francs)	1,850	2,725	+	875
Swiss francs.....(100 francs)	4,450	7,100	+	2,650
English pounds.....(£1)	965	1,570	+	605
American dollars .....($1)	265	440	+	175
German marks ....(100 marks)	415	535	+	120
Austrian kronen ..(100 kronen)	78	80	+	2

Tsarist roubles are quoted 315. This quotation applies to notes of 500 roubles, when unfolded. For folded and for smaller notes much lower prices are paid Nobody can give a reason for this differentiation, which seems to be only one of the devices of speculation.

AUSTRALIA.—EXCHANGES—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 11.

THE recent unfavourable alteration in Australian exchange and the check to remittances to London by T.T. imposed by the banks have come as the result of several causes operating at about the same time. Australian import trade has expanded materially during the last few months, and the drafts, especially those representing American shipments, have reduced Australian balances in London. The same effect has been produced by Government remittances from Australia to London, including those of the Commonwealth Government for payment to the British Government and of the Victorian Government for the redemption of the old six million loan which matured in London on October 1st, after allowing for the portion converted in London, £2,302,000. Little assistance towards replenishment of London balances is at the moment obtainable from Australian exports, as only limited quantities of wool are being sold at the Australian auction sales, and no wheat shipments of consequence can be made before January. Recent official trade statistics have shown fair totals on the export side from month to month, but the figures are subject to the qualification that payment for wool and wheat had been made by the British Government considerably in advance of shipments, so that current exports do not represent corresponding amounts of fresh money receivable by Australia. Suggestions for relieving the position of exchange mostly take the form of raising fresh credits in London either by direct Government borrowing, which would be expensive, or by arrangement with the British Government for an advance, which would be contrary to the desire expressed by the British Government for some time past for a reduction of the advances made to Australia during the war. Gold exports are still prohibited by the Government, apart from new gold production, and the Treasurer declines to relax the prohibition as requested by members of the London Chamber of Commerce. Apart from fresh borrowing in London in some form or other, relief is expected from a curtailment of Australian imports, and from progress in dealing with wool, wheat, and other articles of Australian produce as the season advances.

During the last few months the banks have experienced a heavy demand for accommodation from the country districts, especially in New South Wales and Queensland, and from traders, whose requirements have been enhanced by the increase in stocks resulting from large importations of goods at high prices. Supplies of money in private hands have been affected not only by the local borrowings of the Commonwealth, and several of the State Governments, but also by rather numerous issues of new capital by various companies. Between these influences and the adverse exchange position the Stock Exchanges have weakened since the end of September. Melbourne closing quotations on October 10th for Commonwealth Government bonds were :—4½ per cent., due 1925, 90¾-91 ; 4½ per cent., 1927, 89⅞-90 ; 5 per cent., 1927, 89⅞-90¼ ; 5 per cent., 1923, 94-94⅛ ; 6 per cent., 1930 (with £2 interest, payable December 15th next), 95½-95⅝.

Letters to the Editor.

SHORT TERM NOTES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I read, with great interest, the article under this heading in the *Economist* of the 20th inst., but was disappointed to find no reference to a point which has struck me on reading the many prospectuses issued during recent months inviting applications for this class of security, namely, what appears to me to be the incorrect and, in some cases, misleading method of setting out the security covering the notes.

The usual formula may be summarised in a very simplified form as follows :—

	£
Notes to be issued	250,000
Assets—Specified under various headings, including estimated net proceeds of notes	2,000,000
Deduct—Trade creditors and other liabilities, including provision for income-tax and excess profits duty	750,000
Surplus	1,250,000

therefore, the Note issue is said to be *covered five times.*

But it appears to me that the correct way to set out the security would be :—

	£
Assets	2,000,000
As security for—Trade liabilities, &c.	£750,000
Notes	250,000
	1,000,000

showing *the liabilities* of the company covered *twice.*

The statement is, obviously, only of value as showing what the position of the noteholders would be if it became necessary to realise assets to pay them off, the company being in difficulties. Although, naturally, the position of the company will have altered, presumably for the worse, by that time, the fact will remain that the notes still rank with the other unsecured creditors, and any loss on realisation will fall *pro rata* on them all.

It seems to me that the underlying fallacy is the ignoring of the fact that the figure of liabilities is unvarying in value ; that is to say, it will always be payable at 20s in the £, whereas the value set on assets is, when the occasion arises, subject to realisation.

To take an extreme case to illustrate clearly my argument : assume the following statement to appear in a prospectus :—

	£
Assets	1,000,000
Liabilities..	950,000
Surplus	50,000

covering, *ten times,* a note issue of £5,000.

Would this be a fair deduction from the facts?

A loss of 10 per cent. on realisation, a ridiculously small percentage to estimate, would leave the noteholders with a deficiency !

I fully appreciate that there may be some fallacy in my arguments, and if this be the case, I shall be extremely grateful if you, or any of your readers, will point it out. —I am, yours faithfully, CITY.

November 22nd, 1920.

[Our correspondent's point is important. A security that is really covered five times would still be covered even if the value of the assets were divided by five. In the above case this would clearly not be so since the assets would be reduced to £400,000, and the notes and other liabilities with claims against the assets amount to £1,000,000. —ED. *Economist.*]

BRITISH DYES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—From the point of view of the colour user, or, at any rate, of the calico printer, there is much to praise and little to find fault with in your article entitled "The Problem Behind British Dyes," in the *Economist* of the 20th instant. The most practical proof of the goodwill of the dye users towards the British dye producers is to be found in the fact that for practically his whole requirements in indigo, alizarine, and nitraniline colours the British user looks to the British producer. But it is admitted on all hands that the almost infinite variety of other colours required in the calico printing trade—to name but one—must for the time being be sought from foreign sources. And the dye producer demands some measure of legislative support to enable him, as he says, to meet foreign competition. Passing over the difficulty, perhaps the crucial difficulty, that you cannot make chemists by Act of Parliament, let me examine your statement of the user's attitude to the producer's suggestions as to the form in which the latter should receive support. You say:—"The dye producers.....admit that German dyes must be allowed in, but they want a heavy tariff to be imposed, or—what comes to the same thing—a heavy *ad valorem* licence duty. The dye users, on the other hand, though not hostile to a licence system, object entirely to tariffs or licence duties." In this connection it is not too much to say that a great and growing body of opinion among users is totally opposed to licensing in any shape or form while those users who do not go so far will only accept licensing willingly if subject to such safeguards as to render the system nugatory and abortive in the eyes of the producer and of the Government. The user does not regard a tariff and a licensing system, with or without licensing duties, as in any sense interchangeable. Many known Free-traders in the calico printing trade will declare themselves in favour of a tariff rather than of any system of licensing to which the producer is likely to consent. The crux of the matter lies herein. Under a tariff the *foreign* dyes (for the supply of dyes is not merely a matter of German origin) are available at a price. Under licensing the foreign dyes may not be available at all. And the printing may go where the colours are found.

The dye user, to be frank, has no liking for subsidised State industries, nor in the vast majority of cases for Protectionist tariffs; he is fairly well satisfied, for his own part, with things as they are; but he is prepared to consider schemes for subsidies or tariffs or other schemes, which may be adumbrated from time to time; and although he knows that he will be called upon to bear a portion of the cost of such schemes, he will submit to that handicap rather than to a licensing scheme, which, it appears, will not satisfy the producer unless it puts the user out of the race altogether.

Having said so much by way of comment on the views attributed to dye users, and, as I contend, largely so attributed in error, let me outline briefly the salient objections of the user to any scheme of licensing. These objections are in part based on experience of licensing in the past, and in part are objections which seem inseparable from any system likely to be introduced in the future.

(1) Licensing means delay, expense, and bureaucratic interference with the freedom of trade.

(2) In trades where contracts are made many months ahead, it is already under present conditions impossible to guarantee deliveries, and in face of world competition any superadded uncertainty may mean the death of the British trades concerned.

(3) Licensing cannot proceed without hardship and unfairness either to the dye producer or to the dye user. If the onus is on the user to show cause why he should import a given colour, his production is retarded or stationary until his case is proved. If the dye maker, being ready to market a certain colour, must then prove his case for prohibition of imports of that colour, his productive ability is lying idle, and opportunity is given for accelerated imports.

(4) A licensing committee of fair-minded men, not experts, with the best will in the world, cannot but work injustice. A committee of experts representative of all interests could only be trusted to disagree.

There may be urged against some or all of these arguments that licensing in the past is no reliable guide to the probable effect of licensing in the future. Ruefully the colour user admits that this is the case. Under the late system of licensing the potential rigours of such a system were a dead letter so far as the vital products of the Swiss manufactories were concerned. It is abundantly clear that the British dye producer is not going to accept any system which is not alive and active, and, it is perhaps not too much to say, actively deleterious to the consumer's most intimate concerns.—I am, Sir, yours faithfully,

H. BROADBENT,
For the CALICO PRINTERS' ASSOCIATION, LIMITED.

St James's Buildings, Oxford street, Manchester,

MUNITIONS EXPENDITURE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the article, "Accounts, Expenditure, and Trade," in your current issue, you say that the Ministry of Munitions is responsible for a gross total expenditure in the present year of £58,190,000.

May I point out that the above figure, like those quoted by Mr Asquith, is wholly inaccurate? It occurs in out-of-date estimates which were prepared before certain functions of the Ministry were transferred elsewhere. The gross total sanctioned by Parliament is £31,300,000, and of this a great part consists of cross entries for accounting purposes. When these and sundry credits have been allowed for, the net total is £19,003,000, and this is the sum actually voted on August 3rd last. Against this there are estimated receipts of £200,000,000, showing a net credit to the Exchequer of roughly £181,000,000.

As to your further contention that receipts should not be treated as revenue, *à priori* there is much to be said for this view. Of course, they are not normal revenue, but neither are the expenses normal expenses; both will decline and finally disappear. However this be, it is not fair to blame Mr Chamberlain for showing receipts from sales of stores as revenue. In accordance with the established financial system of the country, all receipts (unless specifically authorised by statute to be otherwise dealt with) must be paid into the Exchequer as revenue, and all expenditure (including debt redemption) equally flows out of the Exchequer. The Chancellor is, therefore, only following the regular financial procedure of his predecessors in accounting for war receipts as revenue.—I am, Sir, your obedient servant,

JAMES F. HOPE,
Parliamentary Secretary.

Caxton House West, Westminster, S.W. 1,
November 25th, 1920.

[The figure of £58,190,000 was taken from the estimates for Civil Services as ordered by the House of Commons to be printed on February 10th last. No argument was based upon this figure. On the contrary, the point of the article was that the figures as presented to Parliament meant little or nothing. Our criticism of the Ministry was directed to the cost of the staff, to the scandal of the St Omer dump, and to the unintelligibility of several items in its expenditure. With regard to crediting the sale of war stores to revenue, it is perfectly true that a similar practice has long prevailed in the national accounts; but that practice had its origin in the fact that the capital transactions of the Government in previous generations were relatively unimportant.—ED. *Economist.*]

MOVEMENTS OF GOLD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—From the Trade and Navigation accounts it appears that during the month of October the import of gold into the United Kingdom was the equivalent of the gold content of five million sovereigns (nearly the whole of which came from the Transvaal and Rhodesia), while the export of gold during the month was 24 million sovereigns' worth. Of this huge quantity nearly 22 million

went to the United States of America in the form of refined gold bullion, and less than two million went to India, which has in the last 16 months obtained 32 million sovereigns' worth of gold from the United Kingdom alone. Since January 1st the United States have imported from Britain the equivalent in gold of 44 million sovereigns, no doubt partly in repayment of the Anglo-French loan which has now fallen due. It seems extraordinary that the United States, which already hold in gold coin and bullion alone over 600 million sovereigns' worth of gold, should prefer to take repayment of their loan in gold rather than in commodities or securities.

On a short view it might have been expected that the transport of so much gold from Europe to America would improve the New York rates of exchange in favour of the European countries, but the contrary has been the case. On October 1st the British paper pound was worth in New York 349¾ cents, while on November 8th it had fallen to 334.5 cents, as compared with the par value of the sovereign of 487 cents. Similarly the French paper franc fell in New York from 6.74 cents on October 1st to 5.74 cents on November 8th, as compared with the par rate of 19.3 cents. This means that on November 8th in New York the British paper pound was worth only 69 per cent. of the value of a sovereign, and that the French paper franc was worth only 30 per cent. of the value of a gold franc. Such a serious fall in the exchange value of the European paper currencies may be partly due to the recent enormous export of gold from Europe to America, as this must have led the financiers, not only of the United States, but of the whole world, to doubt whether there is any prospect of an early redemption by the European countries of their excessive issues of paper currency. However much we improve the balance of trade by increasing our exports and diminishing our imports, there seems little hope of any marked improvement in the rate of exchange with America, or in the value of the paper pound measured in gold, until we convince the world's financiers that we are in earnest in aiming at the reduction of our excessive paper issue; and one of the first steps towards such a reduction is the accumulation in this country of a large quantity of gold, with the object of ultimately being in a position to offer a gold sovereign for every paper pound outstanding which the holder may wish to exchange for gold, and to allow him to export it if he pleases.

J. Wilson.

Ochilview, Crieff, November 11th, 1920.

EXCESS PROFITS DUTY.

TO THE EDITOR OF THE ECONOMIST.

Sir,—The Finance Act, 1920, imposes this duty until August 4, 1921, unless Parliament otherwise determines. In equity, as E.P.D. has applied to all accounting periods which ended after August 4, 1914, no date other than August 4th in any year can be fixed for the termination of the duty, otherwise, the whole period of the duty would not apply equally to all taxpayers alike. Thus, with the duty terminating on, say, November 30, 1920, trading concerns with annual accounts made up to dates between August 5th and November 30th would be assessed on the results for seven years (1914-1920), while those with annual accounts made up to dates between December 1st and August 4th would be assessed on the results for six years only (December 1 to 31, 1914-1919, and January 1 to August 4, 1915-1920). This would be grossly unfair as between taxpayer and taxpayer.

E.P.D., which was introduced on September 21, 1915, and passed on December 23, 1915, applied to accounting periods which ended after August 4, 1914, and was therefore retrospective in operation to the extent of 16½ months.

The Inland Revenue cannot now determine, as before the fall in values, whether the net outcome of all trading accounts made up to and closed, say, in October, is a liability to duty under E.P.D. or not. The trading returns to any particular date will not be presented to the Inland Revenue until from, say, three to eight months or more after such date. A loss on E.P.D. for accounts closed in November might not therefore be known until, say, May next near. The revenue collections in November are, of course, in respect of accounting periods long past, and have no bearing on the question

The Act terminating E.P.D. should, on the basis of the Act imposing the duty, be retrospective in operation, and under all the circumstances August 4th last (1920) seems to be the most suitable date. The Government would secure the duty of 60 per cent. from January 1 to August 4, 1920, in respect of accounting periods ending between these dates, so that the increase in revenue resulting from the increase in the rate of duty from 40 per cent. to 60 per cent. in the Finance Act, 1920, would not be lost in respect of such accounting periods.—Yours, &c.,

November 25th, 1920. G. C. Durward.

TRADE BARRIERS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—I am inclined to agree with you (page 580) that the chief American delegate at the Brussels International Conference was unnecessarily blunt in his telling the Conference Americans did not consider Europe at present a good risk, though that is certainly a contingency to be feared. If the European States would but tear down the trade barriers that are strangling their commerce they would soon bear the aspect of the safest kind of risk. Let me add that I realise how strange this doctrine must sound coming from an American, but I have been a Free-trader (not a Tariff Reformer) for many years.

Allow me to suggest, too, that you might dilate on the fact that it was Free-trade Britain who financed her Protectionist Allies through the greater part of the war, and that it is Britain and Belgium, the two lowest tariff countries in Europe, and who have approached most closely the *laissez-faire* ideal, who are making the quickest recovery from the effects of the war.

These two facts should be convincing as to the superiority of commercial freedom over commercial restraint and regulation.

If political economy is a science at all, its laws are not national, but universal.—Yours for common sense,

Stephen Bell,
Asso. Editor *Commerce and Finance*.

Millburn, N.J., U.S.A., November 4th, 1920.

REVIEWS.

"The Nation's Food (U.S.A.): A Statistical Study of a Physiological and Social Problem." By Professor Raymond Pearl. Pp. 274. (Philadelphia and London: W. B. Saunders Company, 1920.) Price 16s.

Professor Raymond Pearl's new book deals with a subject of paramount importance not only to America, but also to Europe, and in a manner more reassuring and optimistic than many recent works on the world's food supply. In comparing, for instance, the annual increases in the production of food with the growth of population, the conclusion arrived at is that the food supplies of the United States are increasing more rapidly than the population, so that there is at present no ground for any sort of Malthusian apprehensions. The following table gives the total food production in the U.S.A. in millions of metric tons :—

	Total Food.	Protein.	Fat.	Carbohydrate.
Average for 7 years 1911-18.....	90.2	4.1	5.7	16.3
Average for 3 pre-war years	85.6	3.8	15.5	15.3
Average for war period.....	93.7	4.2	5.9	17.1

Animals contributed 58 per cent. of the total food (by weight), 50 per cent. of the protein, and 83 per cent. of the fat. The table shows what a very large percentage of waste there is in most foodstuffs; it will be seen that only about 29 per cent. is net nutriment; the remainder is water, ash, and inedible refuse.

The valuable and exhaustive data contained in the numerous tables in Professor Pearl's book include America's contributions to the food supply of the Allies during the war. The pre-war average export of wheat and flour was 122.7 million bushels, of which 43.3 millions went to the Western Allies. During the war, but before America's entry, it rose to 262.9 million bushels, of which 151.2 millions went to the Allies.

The main sources of food supply are cows, pigs, and wheat, accounting for 62 per cent. of all the protein and carbohydrate, 69 per cent. of all the fat, and 65 per cent. of all the calories, and the conclusion seems well justified that food increases in the future will be most surely obtained by concentrating on these great staples, although no possible source must be neglected.

The high-water mark of food exports from the U.S.A. was reached in 1914-15; afterwards they declined, and in 1917-18 were down almost to pre-war levels; although increasing amounts were being sent to the Allies, the rest of the world was receiving very little, if any. But in spite of the large exports during the war, more food remained per head in the U.S.A. than in the pre-war period.

Among the last tables in the book is one of considerable interest, showing the average daily consumption per adult man :—

	U.S.A. Grammes per day.	U.K. Grammes per day.	Physiological Minimum.
Protein	120	113	100
Fat	169	130	100
Carbohydrate	541	571	500
Calories	4,288	4,009	3,400

The figures are not corrected for waste.

"Industrial Democracy." By Sidney and Beatrice Webb. New edition, 1920. Longmans, Green and Co. 21s net.

THIS is the *Industrial Democracy* of 1902 substantially unchanged. The Appendices are lightened by the removal of that on the Legal Position of Trade Unions (the substance of which may be found in the new edition of the authors' *History of Trade Unionism*) and by the most regrettable disappearance of the Bibliography. In a new introductory chapter Mr and Mrs Webb glance at the more modern influences affecting the trade union world, such as novel methods of payment by results, "Scientific Management," the growth of social insurance, and the allied questions of the proper basis of union membership and the part which the unions are destined to play in the economic system of the future. The authors note with satisfaction that "the most obvious contrast between the trade unionism of 1890 and that of 1920 is the much more influential position in the community that it occupies." They believe, however, that the conclusions to which they came in 1897 would, in the main, hold good of the trade unionism of to-day. Their work is certainly as interesting and valuable as ever, and in no sense out of date.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 14.	December 15.

THE record of the Stock Exchange markets in the week just ended is one of depression and gloom. The various reasons operating against Stock Exchange confidence for the past few weeks have come into more sharper prominence than ever. As the end of the year draws nearer, the commitments open for December in various markets—produce rather than stock and share—assume the more threatening aspect, owing to the difficulty of obtaining financial help. The man who has to provide money may endeavour to get rid of his obligations by selling what he cannot pay for, but where this is impossible, he finds it imperative to realise anything which can be sold. This leads to selling in all those markets of the Stock Exchange where anything like free dealing continues. Heavy slumps occurred in the oil section on Thursday night. These led to the circulation of all kinds of wild rumours respecting financial trouble in various directions.

Expectation of heavy new loans from various municipal corporations had the effect of making the War Loan, Consols, and other gilt-edged stocks easier. The underwriters of the New South Wales 6½ per cent. loan are called upon to take up 70 per cent. of the stock, the price of which has gone back to 1¼ discount. There is still a little inquiry for the Home Railway prior charge issues, though not enough to make appreciable

difference to prices. The colonial list keeps tolerably steady, and in most of the 6 per cent. county and corporation issues there is noticeable firmness. National War Bonds, however, are inclined to give way now that there is so little object in buying them as a cheap means of paying excess profits duty.

Foreign Government stocks recovered a little from the worst, and Uruguay bonds, for instance, which were flat in the middle of the week, rallied a trifle before the close yesterday. Mexicans also, after being flat, rallied slightly, but the majority of bonds in this department follow the trend of other markets. German Threes have been active, owing to the movements in the mark, and the price, after touching 5¾, rose to 6⅜. French Fives and Fours again gave way. Falls running up to 5 points occurred in some of the South American municipal issues.

Home Railway stocks are lower where they have moved at all, the market declaring that, though no particular selling has occurred, there is nothing in the shape of public support to help quotations. Dollar stocks are mostly down. Mexican Rails, Argentines, Brazilians, and Nitrates are all flat. There is no other word that so fitly describes the state of the markets in these issues. Nitrate-producing shares show substantial falls on reports that a critical time is approaching in the industry, and that production is overtaking consumption.

The rubber market has sagged further, with the price of the produce remaining about 1s 1½d per lb. Oil shares slumped heavily as liquidation proceeded in most of the various groups. The fact of there still being a ready market in the leading oil issues renders the shares popular for selling by those compelled to provide money to meet business obligations. Shipping shares have weakened, with the exception of Indo-China deferred, the latter being good on the report recently published. Iron and steel shares have again fallen, and underwriters of notes in this department find themselves left with, perhaps, more than they expected. Dunlops have been acutely depressed, and part of the selling is said to be traceable to those who have to raise money to pay the call of 7s 6d per share due next Tuesday on the new issue made two months ago. Courtaulds fell away, in spite of the meeting on Thursday, and other textiles have been disturbed by rumours (which have had their effect in other markets as well) of failures in Liverpool. Electrical manufacturing shares are weak, on fears that last year's dividends may not be maintained. Yet some of the industrial companies are declaring good dividends, Amalgamated Cotton, for instance, with its 1s 6d per share net, making 12½ per cent. net for the year, and Pease and Partners, which raises its interim dividend to 7½ per cent., an advance of 1½ per cent. The price gave way, however. Brewery stocks suffered, and insurance shares are lower.

In Kaffir shares there is no strength left. Notwithstanding the fact that gold keeps a good price, sellers are predominant in most of the South African sections. Rumour has started the idea that substantial blocks of previous "enemy-held" shares may be coming to market before long, and this is quite sufficient to stimulate the fall already commenced by the conditions prevalent elsewhere. Mexican mines are in no better case. Esperanzas have fallen to 17s 6d, against the 52s 6d they touched during the excitement last month. Broken Hill shares gave way, in consequence of the absence of any support from Australia such as was hoped, rather than expected, on the announcement that the Barrier strike had finished. Other base metal shares are affected by the flatness prevailing in the markets for the metals. Russo-Asiatics fell back, after going a little better, on the prospect of trade relations being reopened between Russia and the United States, possibly also with this country. But there is no business in mining shares, nor can it be said that the fall has brought an increase of trade in other markets. Some Stock Exchange firms openly admit that they have not made sufficient money this week to pay their office expenses, nor do they see any prospect of business improving on this side of the New Year.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. Holders of Exchequer bonds maturing on December 1st are given the privilege of using their bonds ex dividend as the equivalent of cash at par as on November 18th for the purpose of subscription to Treasury bonds, in addition to receiving a full six months' dividend on December 1st on their maturing Exchequer bonds. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Seven Corporations 6 per Cent Loan.—Issues of 6 per cent. redeemable stock at 95½ per cent.—£500,000 Bootle, £650,000 Bournemouth, £300,000 Ipswich, £400,000 Northampton, £750,000 Rotherham, £900,000 Stoke-on-Trent, and £500,000 Wolverhampton. The stocks will be redeemed at par on December 1, 1950, unless the same shall have been previously cancelled by purchase in the open market or by agreement with the holders, but each Corporation will have the option of redeeming at par the whole of the outstanding amount of its issue at any time on or after December 1, 1938, on giving three calendar months' notice. Dividends on each of the stocks will be payable half-yearly—*i.e.*, on June 1st and December 1st in each year. The Ministry of Health requires the corporations to make annual provision for the ultimate redemption of the debt created by this issue by means of sinking funds, and to furnish annual returns showing the position of their loan accounts. Each stock—and the interest thereon—is secured separately upon its own Corporation funds and revenues. The proceeds of the present issues of stocks will be applied for housing and other purposes. These are trustee investments.

Hadfields, Limited.—Authorised capital £2,500,000, of which £2,145,034 has been issued. This is an issue of £1,000,000 7½ per cent. 10-year first mortgage debenture stock at 98 per cent., repayable at 102 per cent. on February 1, 1931. These debentures are limited to a total issue of £1,000,000, and will be secured by a trust deed in favour of Sir Robert Hadfield, Bart., and B.S.T., Limited, constituting a first specific charge on freehold land and buildings, fixed plant and machinery, and a floating charge on other assets. The company owns 220 acres of land in and about Sheffield, on about 45 of which are erected works and buildings, and it enjoys an excellent reputation for the manufacture of steel castings and forgings, &c. Surplus assets are valued at £3,263,755. Freehold land and buildings are valued at £397,638, while "fixed plant and machinery, loose tools, and implements of trade, &c.," are valued at £567,102. In order to gauge the value of assets covered by the specific charge, it would have been better, perhaps, if the value of "fixed plant and machinery" was stated separately. However, a point which completely outweighs this comment is the fact that property and machinery have been valued at pre-war cost, less a "liberal depreciation." Investments "at market value or cost" (including upwards of £500,000 of British Government securities) are stated at £556,401. Incidentally, in the contracts dated November 25, 1919, and January 14, 1920, between the company and Harper, Bean, Limited, it was agreed that 166,666 8 per cent. preference and 83,334 ordinary £1 shares in Harper, Bean should be acquired. Profits are given from 1912. In 1918 the ordinary capital amounted to £400,000. This has since been increased by "the capitalisation of the reserve fund and part of the undistributed profits," amounting to £800,000 and the issue of 400,000 new ordinary £1 shares to shareholders at 30s per share. These debentures are well secured, and attractive in their class.

Rhodesia Railways, Limited, and Rhodesia Railways Trust, Limited.—The Rhodesia Railways, Limited, has a share capital of £8,000 and a debenture debt of £6,180,965, representing an annual charge of £264,028. The Rhodesia Railways Trust, Limited, has a nominal share capital of £3,000,000 in £1 shares, of which £2,005,767 are issued and fully paid. No debentures have been issued by this company. Resolutions were passed at board meetings of these two companies, creating £2,000,000 notes, carrying interest at 6 per cent. per annum, free of English income-tax and free of tax in the Union of South Africa to holders resident outside that Union, repayable at par at the end of ten years from February 1, 1921, and redeemable at any time after the expiration of five years at 103 per cent. at the option of the borrowers, subject to six months' notice. The Rhodesia Railways, Limited, and the Rhodesia Railways Trust, Limited, are joint borrowers. The security of the noteholders is stated in the advertised announcement as follows:—(1) A charge on all the assets of the Rhodesia Railways, Limited, subject to the existing debentures. (2) The rolling-stock owned by the Rhodesia Railways Trust, Limited, and leased by the same to the Rhodesia Railways, Limited, of an approximate value of £1,000,000. (3) The assets of the Rhodesia Railways Trust, Limited. (4) The unconditional guarantee of the British South Africa Company. Messrs Erlangers have purchased £1,500,000 of the notes at par, less a commission of 6 per cent., of which they are retroceding 5 per cent. to their sub-purchasers, with the exception of £600,000 taken by the Beit Railway Trust, who are receiving the full commission of 6 per cent. The whole of the £1,500,000 has been placed by Messrs Erlangers, and there will be no public issue. It should be noticed the trustees have been appointed to act on behalf of noteholders. This information is extracted from an advertised statement.

The Niger Company, Limited.—Authorised capital £10,000,000, of which £2,750,000 has been paid up. There is also a debenture stock of £175,000, secured by a floating charge on assets. This is an offer of £2,500,000 8 per cent. seven-year notes at 98 per cent., repayable at 103 per cent. Holders of notes will, on redemption, have the right to take up 8 per cent. preference shares of the company at par. The notes will be repayable on December 20, 1927, but the company may redeem notes by drawings at 103 per cent. on any date after December 20, 1923, on giving three months' notice. The company will covenant that so long as any of the notes are outstanding it will not, without the sanction of noteholders, create any charges, except to secure loans from the company's bankers in the ordinary course of business. The Niger Company, Limited, was incorporated in 1882 under the Companies Acts, 1862 to 1880, as the National African Company, Limited. In July, 1886, a Royal Charter was granted, and the name changed to the Royal Niger Company, Chartered and Limited. On January 1, 1900, the Royal Charter was surrendered and the name was changed to the Niger Company, Limited. The surplus of assets over liabilities is given as £3,500,000, while profits are given from 1910. On this basis the margin for security is not as wide as that offered by many big undertakings, but it is stated that "the directors are informed by Lord Leverhulme that the value of assets to be transferred by him will be such as to raise the surplus assets of the company to over £8,000,000." The price paid by Messrs Lazard Bros. and Co., Limited, for the notes is 94 per cent. Intending investors should carefully consider the general aspects of the position of noteholders in companies, although in this case the eminence of the names of directors, the past financial history of the company, and the connection with the Lever, African, Eastern group, are points favourable to the investor.

Bolckow, Vaughan, and Co.—Authorised capital £5,000,000, of which £4,227,720 has been issued. There are also 4 per cent. debentures for £38,400, which are to be repaid next May. This is an issue of £1,000,000 first mortgage debentures, part of an authorised issue of £2,000,000, at par, bearing interest at the rate of 8 per cent. per annum for periods of 5, 10, or 15 years at the lender's option. These debentures are redeemable at a premium of £2 per cent., and they are secured by a floating charge on the undertaking. The company undertakes not to create mortgages or charges on its assets ranking in priority to these debentures, "except to secure bankers' loans or overdrafts in the ordinary course of business." The company was incorporated in 1864 to acquire collieries and iron works belonging to Messrs Bolckow and Vaughan. Profits are given from 1913. Surplus assets are valued at £5,705,879. Although the prospectus states that these debentures "will be a first charge upon the undertaking," there is no mention made of any specific charge or trust deed, nor do we find mention of trustees for debenture holders. Fixed assets are valued at £4,779,256, and if these are offered as specific security for debenture holders, the issue is a good offer of its class. But the prospectus does not make this important point clear. We are informed that the issue has been oversubscribed.

The English Electric Company, Limited.—Authorised capital £5,000,000, of which £2,220,073 has been issued. There are also outstanding £980,000 5½ per cent. sinking fund first mortgage debentures due 1940. This is an issue of £1,250,000 8 per cent. "six-year secured notes" at 98 per cent., repayable January 1, 1927, at 103. We reviewed the position of this company in the *Economist* for July 19, 1919 (see page 99). Surplus assets are valued at £3,920,804, including the proceeds of this issue, and profits are given from 1915. Noteholders will be protected by a trust deed, which assigns to the trustee a floating charge on the assets of the company. The company also undertakes that it will prohibit subsidiary companies from further charging their assets. But it should be observed that this charge is "subject to the mortgages and charges securing the outstanding debentures and bankers' loans and overdrafts in the ordinary course of business." Readers are referred to the article on "Short-term Notes" in our last issue. This is a fair offer in its class, but unsuitable for the small investor.

Frank Myatt, Limited.—Authorised capital £500,000, of which £400,000 has been issued. Issue at 98 per cent. of £400,000 6 per cent. (free of income-tax up to 6s in the £) first mortgage debentures, redeemable at 102½ per cent. The company is engaged in the brewing, hotel, and catering businesses, and the prospectus states that surplus assets amount to £775,000. Freehold, copyhold, and leasehold properties have been recently valued (presumably at to-day's cost of building) at £579,640. These debentures will be secured by a first specific mortgage, in a trust deed, upon "the company's freehold, copyhold, and leasehold land, buildings, fixed plant, and machinery." Profits are given for three years only, and these are shown before charging "income-tax, excess profits duty, corporation profits tax, directors' and managing directors' remuneration, rents of properties of which the freehold interest has been acquired, and interest on mortgages and debentures paid off." We think, however, it only fair to state that this prospectus is marked "proof," and there may conceivably have been some final alterations in the statements. But in the information given in our copy we cannot find justification for calling the offer attractive.

Tottenham Cinema and Entertainment Company, Limited.—Authorised capital £50,000, divided into 49,400 ordinary shares of £1 each and 600 deferred management shares of £1 each. The whole of the deferred capital and 21,290 ordinary shares have been issued. This is an issue of 28,110 ordinary shares at par. The object of the present issue is to enable the company to complete the construction of the Bruce Grove Cinema and Restaurant. The prospectus states that 35,000 ordinary shares were offered for subscription locally, and 20,290 were so allotted. No independent valuation of the site appears, nor are we informed of the present value of the work which has been completed up to date. Intending investors should read carefully article 76, which confers on the holders of management shares substantial voting powers. We do not recommend the issue.

Poonmudi Tea and Rubber Company, Limited.—Issue of £25,000 9 per cent. redeemable convertible debenture stock, to shareholders only. The stock will be secured by a trust deed registered in India. The stockholder will have the option of converting debentures into ordinary shares at par at any time up to June 30, 1924. If not converted, debentures are redeemable at a premium of 5 per cent. on June 30, 1930.

It is further proposed to increase the capital from £60,000 to £80,000 by the creation of 200,000 ordinary shares of 2s each. This information is taken from the *Stock Exchange Weekly Official Intelligence* of November 15, 1920. Conditions in the tea and rubber industry are not very bright at present, but the offer appears to be a reasonable proposition.

The Cape Copper Company, Limited.—Authorised capital £950,000, divided into 400,000 ordinary shares of £2 each and 150,000 6 per cent. cumulative participating preference shares of £2 each. Ordinary shares for an amount of £720,000, and preference shares for £90,000, have been issued. This is an issue of 1,200 registered convertible 8 per cent. debentures of £100 each at par, and repayable at par on November 1, 1930. The company has the option to redeem these debentures at £110 per cent. on one months' notice any time after November 1, 1923. This is part of a total authorised debenture issue of £420,000, but the remainder will be issued to the company's bankers to cover advances. The debentures will be secured by a trust deed containing a first specific charge upon the company's mining properties and works in India and South Wales. In addition to the above-mentioned issue to bankers, the company, however, has the right under the trust deed to "create specific charges in the ordinary course of business in priority to the debentures upon the company's investments." The conversion rights at present appear to have a doubtful value to investors. They consist of the offer of 25 ordinary shares of £2 each and 25 preference shares of £2 for one £100 debenture. The official list gives a quotation of close to £1 for each class of share. The assets of the company are valued at £1,033,735. The prospectus is a clear statement of affairs, and the table of profit and loss accounts from 1889 is also a favourable sign that the directors desire to hold nothing back. The issue will only appeal to a very highly speculative class of investor.

Marsh, Jones, and Cribb, Limited.—Authorised capital £150,000, divided in shares of £1 each, of which 74,517 shares have been issued and are fully paid. This is an issue of £150,000 8 per cent. 10-year notes, at 90 per cent., and redeemable at par in January, 1931. The business of Marsh, Jones, and Cribb, Limited, relating to building and furniture, was originally established 160 years ago by Mr John Kendell, trading as John Kendell and Co., at Leeds. The company was formed to acquire this business in 1905. During the war period the company was engaged upon aircraft work. This department was relinquished in the early part of 1919 on the completion of the outstanding contracts. Annual profits are shown from 1910. Surplus assets, including the proceeds of the present issue, but allowing nothing for goodwill, are valued at £305,210. The company recently increased its capital from £75,000 to £150,000 by capitalising £75,000 of its reserves. In the four years preceding the war profits did not reach the amount required to pay the interest on these notes. Moreover, property in the assets statement is valued at 1920 prices, so that the margin of security would appear somewhat meagre. Further, we would refer our readers to an article on "Short-Term Notes" appearing in the *Economist* for November 20, 1920 (see page 900), where the position of noteholders generally is dealt with at some length.

Arundel, Coulthard, and Co., Limited.— Authorised capital £350,000 in shares of £1 each. The whole of the capital has been issued. The objects of the company are to amalgamate two businesses of textile machinists—namely, Messrs. Arundel and Co., of Stockport, and Coulthard and Co., Limited, of Preston. The purchase price of the two concerns has been fixed at £359,172, payable as to £249,172 to "Joseph Higginson and Hubert Arundel" (presumably for the business of Messrs Arundel and Co.) and £110,000 for T. Coulthard and Co., Limited. Past profits are not given, and there are no figures of assets and liabilities in the advertised statement. It is stated that "there is a certain amount of loan capital, but no debentures or debenture stock have or has been created." This information is extracted from an advertised statement which "is issued in accordance with the regulations of the committee of the Manchester Stock Exchange, and is for information only, and not an invitation to subscribe for shares." However, "the permission of the Manchester Stock Exchange to deal in the shares will be applied for." When they are quoted, investors will require more information than that offered in the statement before purchasing the shares.

Watford Gas and Coke Company.—Issue at par of £25,000 redeemable debenture stock, bearing interest at 7 per cent., to be redeemed at par on December 31, 1930. The prospectus states that the net revenue of the company for 12 months ended June 30, 1920, was £6,452, while the sum required to pay interest on existing mortgages and debentures now being issued amounts to £3,070, leaving available for dividend on ordinary stock £3,382. Although the issue is well covered as regards capital, the margin of revenue for ordinary stockholders does not appear to be any too wide. The "Stock Exchange Year Book" informs us that "The authorised capital, including loans, is now £405,935, and £29,600 has been received on 5 per cent. "A" stock and £132,270 on 3½ per cent. "B" stock. There are also 5½ per cent. mortgages for £24,000."

Welwyn Restaurants, Limited. — Authorised capital £12,000, divided into 11,400 10 per cent. participating preference shares of £1 each and 12,000 ordinary shares of 1s each. This is an issue at par of the total amount of preference shares. Preference shareholders will be entitled to a non-cumulative dividend of 10 per cent. per annum, and, after ordinary shareholders have received 10 per cent., to a further distribution of 5 per cent. The company has been formed with the object of conducting hotel and restaurant business in Welwyn Garden City on the basis, it is stated, of "disinterested management." A concession has been obtained from the freeholders of the estate—the Welwyn Garden City—and it is possible that the company will prove successful. The directors are capable men, and conditions are favourable to success. It must, of course, be remembered that the development of the Welwyn Garden City lies in the future—although it is hoped the near future. The smallness of the issue, which of necessity impairs ready marketability, must be remembered. The circumstances make the issue an interesting venture for those who can afford risks and waiting, but is not suitable for the small investor who cannot.

Lever Brothers, Limited.—The British, Foreign, and Colonial Corporation, Limited, announce that the subscription list in connection with the offer of 4,500,000 20 per cent. preferred ordinary shares in Lever Brothers, Limited, was closed on November 22nd, the shares subscribed for by the public having far exceeded the amount underwritten. Letters of acceptance were posted last Friday.
